

Ondura® has it all  
over other roofing.

ONDURA ROOFING  
ENVIRONMENTALLY  
PREFERABLE

# Ondura® Is Making Waves In Roofing For More Reasons Than One.

Whether as a first roof or a re-roof, Ondura® sheets and tiles bring you many advantages over conventional roofing materials.

Like longer life. Stylish good-looks. Easy installation. And low maintenance.

And Ondura has been in successful use on roofs all over the world for over 50 years.

## There's no other roofing material like it.

Ondura's very construction makes it different, and makes it a superior roofing and siding material at the same time.

Its corrugated design enables it to be both lightweight and strong.

While its total asphalt impregnation means it outlasts most other roofing. Including metal.

But you don't have to take our word that Ondura is tough. It's met rigid building codes throughout the country.

## Ondura re-roofs over practically anything.

If you didn't choose Ondura for your original roof, it should be your obvious choice as a re-roof. The advantage of not having to tear off the existing roof makes re-roofing easier, faster, and cheaper.

That's why Ondura is quickly becoming one of the most popular re-roofing materials ever.

On shingle roofs, Ondura can be applied over up to two layers of shingles if the roof has a solid nail base and if the surface is relatively smooth. And no preparation is necessary; simply nail Ondura sheets or tiles in place.

With uneven surfaces, such as corrugated metal roofing, nailing strips can be used to even the surface. Then the sheets can be installed as over purlins.

Also, because Ondura is more rigid than shingles, the problem of "telegraphing", or showing imperfections on the surface being covered is eliminated.

## If Ondura Wasn't Your First Roof, Make It Your Last.

## With Ondura you save money on labor. And that's not all.

Ondura has a major cost advantage over other types of roofing. Especially when you consider that man-hours can be cut virtually in half for most jobs. Which means you can usually complete the job in one day instead of two.

Clean-up cost is also cut because non-biodegradable shingles are covered over instead of thrown away. And with America's growing problem of overburdened landfills, you'll do more than save money. You'll be helping save the environment as well.

## It's easy to install, even by yourself.

Ondura doesn't require special skills or tools to install. Just common tools, such as a hammer, chalk line, saw and a measuring tape.

Ondura's lightweight panels weigh only 18 pounds each and have no sharp edges. This makes them easy to handle, even by one person.

And our installation brochure takes you step-by-step through the procedure, from estimating materials to handling hips, valleys, flashing, and slope changes.

There's even a section on how to make sure your roof isn't out of square.

In fact, these instructions cover everything you need to know. Even if you've never put up roofing or siding before.

Accessories include ridge vents, fiberglass skylights (for use with sheets only), a molded pipe flashing accessory, and color-coordinated Ondura nails.

## It's easy to maintain.

Ondura comes in a variety of handsome baked on colors with a smooth finish.

What's more, Ondura sheets and tiles can be repainted. So your roof can have whatever color scheme you want to complement the structure it's on.

Ondura. It's the new wave in roofing and siding with over 50 years of reliable performance behind it.

# Ondura® Makes a Stylish Roof On Any Home.

Ondura sheets and tiles are showing up on roofs everywhere. And for good reasons.

Ondura gives a roof the attractive look of more expensive tile. But without the weight and costly installation.

It has a unique appearance—one that looks good on contemporary homes and traditional homes, too.

Then there's the fact that Ondura comes with a lifetime limited warranty. No other roofing does. Not one.

With these features it's no wonder Ondura is fast becoming the new look in home roofing.

# Ondura® Is Perfect For Small Do-It-Yourself Projects.

Ondura's versatile sheets, tiles and accessories are easily adaptable to small and unique projects.

Do-it-yourself installations are a breeze when Ondura is used for backyard storage shelters, gazebos, dog houses or even a privacy fence.

Picture Ondura on your community projects such as picnic shelters, baseball dug-outs and playgrounds.

## Best of all...Ondura comes with a Lifetime Limited Warranty!

Ondura sheets and tiles are made of a tough organic fiber core that's totally impregnated with asphalt, one of nature's best preservatives.

Because we make it this way, we can back it with the strongest warranty in the roofing industry. It states Ondura will replace any sheet that is found defective in workmanship or materials for as long as you own the structure it's on.\*

# Ondura® Is Rugged Enough For Any Commercial Use.

From giant Navy blimp hangers to restaurants, from fertilizer processing plants to marinas, Ondura has proven itself on a variety of tough industrial and commercial jobs.

And many business managers find Ondura is the perfect problem solver—sealing out leaks, holding down costs, and recycling old buildings with new, handsome roofing and siding.

Plus, Ondura's easy installation means that, more often than not, in-house maintenance crews can put it up, saving you money on outside labor costs.

In case after case, Ondura has met and passed critical review by industrial architects and plant engineers.

But then, Ondura has also met the criteria of most state and local building codes, as well.

In the process, Ondura passed tests for impact resistance. Flexural strength. Freeze-thaw resistance. Accelerated weathering. Wind uplift. And all types of chemical and acid resistance.

So you know Ondura will pass the test with your commercial application. Easily.

# Down On The Farm, Ondura® Goes Up Everywhere.

Ondura is a smart buy for any farm. For a number of reasons.

To begin with, it's the roofing and siding sheet that does away with rust and corrosion—even under the worst barnyard conditions.

Because unlike metal, Ondura's corrugated fiber/asphalt construction gives you the life-long durability you want and need in a roofing and siding.

So while destructive chemical reactions eat away at metal sheeting, your Ondura-covered buildings simply do their job protecting animals and equipment year after year.

And consider this. When properly installed, Ondura can withstand snow loads up to 55 pounds per square foot. And wind forces of over 125 miles per hour.

What's more, an Ondura roof is less noisy in stormy weather than any metal roof.

This is because Ondura's asphalt construction absorbs and dulls the sounds of rain and buffeting wind. So live-stock stay calmer than they would under a loud metal roof.

All in all, Ondura's got you covered on the farm.

# Specifications and Accessories

## Sheet Specifications

Size: 48" X 79" each  
Weight: 18 lbs.  
Sheets per covered square: 4.5

## Tile Specifications

Size: 48" x 19 3/4" each  
Weight: 4.5 lbs.  
Tiles per covered square: 24

## Washed Nails.

They're painted galvanized, ring-shanked, and come with a large EPDM rubber washer assembled. 3" standard length. 4" length is available for use over rigid insulation. In high corrosion conditions near salt water or in fertilizer applications, stainless steel nails are required.

## Ridge Caps.

Now available in two widths. New Narrow Ridge Caps, ideal for residential use, measure 79" long x 12 1/2" wide. For farm or commercial use, wider Ondura ridge caps measure 79" long x 19" wide. Both widths are made from the same material as Ondura sheets and cover 6 feet of ridge or hip with a 7" overlap. Lightweight and easy to install. Use narrow ridge caps with the Ridgeline Ridge Vents or use alone. Also available in Ridgetile.

## Closure Strips.

Now available in two styles: Ventilated or Regular. Use Ventilated Closure Strips in conjunction with Ridgeline Ridge Vents for an improved ventilating system or in areas where additional ventilation is desired. Regular Closure Strips should be used whenever a water-tight seal is necessary. Each closure strip comes 44" long.

## Skylights.

Translucent fiberglass skylight panels, 48" x 79", let light in and keeps glare out for pleasant, bright working conditions. Ondura skylights are energy savers, too, since they provide natural light. And having the same configuration as the Ondura sheets, they are easy to install. **Not for Residential Use.**

## Pipe Flashings And Boots.

Ondura's two pipe flashing accessories install easily with an Ondura pipe boot. The accessories have large center areas which accept a wide range of pipe sizes. May be used for hot or cold pipes.

Available in two sizes. Small size measures 20" W. x 26" H., 12" x 12" flat center. Large size measures 28" W. x 34" H., 20" x 20" flat center

## Ridgeline® Ridge Vent.

The ideal product for improved air flow throughout the attic area. And that helps eliminate moisture, reduces energy costs and increases roof life. What's more, the Ridgeline vent is practically invisible once installed.

*Special Order sheets of Ondura are available with a Class-C fire rating and Ondura can be manufactured in virtually any color you desire. Minimum quantities may apply.*
