PRE-FINISH WARRANTY

Pre-Finish 10-Year Limited Warranty

WARRANTY COVERAGE:

MMI DOOR will warranty our finish painted or stained doors for a period of ten (10) years from the original date of purchase by the dealer. This warranty covers paint failure in the form of peeling with no evidence of abuse. We cannot warranty paint or stain finish chipping or scratches caused by product abuse or improper installation. Paint and stain samples may vary from the actual finish. For further examples of our paint and stain options, please refer to our Paint and Stain Selection Chart for Fiberglass and Steel Entry Systems. Color fading caused by exposure to natural elements also is beyond ours and the paint or stain manufacturer's control.

APPLICATION:

This is the most important step in your new entry system selection process. Protecting it properly can lower maintenance, improve performance and extend the life of your new entry system.

Every exterior door requires protection and there are many factors to consider such as exposure to natural elements, color choices, storm door use and the degree of homeowner maintenance required. All of these factors must be evaluated to determine your final choice.

OVERHANG:

In short, every exterior door—Entry, Patio or French Doors—should have an overhang to protect the unit from natural elements, lowering care and maintenance and extending the life of the unit. Overhangs should extend at least four feet wider (two feet each side) than the door unit and at least five feet out from the house. In extreme exposures (facing south or west) or climates (desert or coastal) overhangs should be double that size. Inadequate overhang protection can lead to color fading, component damage and water related issues such as warping, wood failure or leakage. Adequate overhangs increase your choice of door types, design, colors and specifications. They also insure years of dependable performance.

COLORS:

The effect of natural elements, especially the sun, is generally under estimated. The face of an exterior door can exceed 120 degrees in many applications. Prolonged exposure at these temperatures can quickly deteriorate the finish and physically damage the door. Remember—light colors reflect heat, dark colors absorb heat. Consider sun exposure and overhang protection when selecting a color for your door.
