

Onyx Marble Design Product Care Instruction

Onyx Marble Design specializes in manufacturing and distributing sinks that are both decorative and highly crafted. As with any luxury item, providing some loving care will assure that your sink remains a stunning showpiece for years. After you make the smart choice to purchase one of our sinks, please take a moment to review over the care information detailed below.

The Onyx Marble Sink Design

Since marble and onyx are porous, they do have the potential to stain. Because these sinks are polished, the pores are minimized but nonetheless it is important to dry away excess liquid from the sink. Should you spill chemicals or dyes onto the sink, wipe the liquid away as soon as possible. To remove buildup or soap scum, clean off the sink using nonabrasive detergent, warm water, and a soft sponge or cloth. Ordinary dish detergent is effective as well but be sure to rinse and dry the onyx or marble after application.

To clean watermarks and stains from your natural onyx or marble sink, commercial quality stone cleaning solutions are by far the most effective. These can usually be found at your local hardware store. Avoid using tile cleaners, tub cleaners, alcohol, vinegar, ammonia, window cleaners, lemon juice, acidic or abrasive cleaners or any type of metal brush. As stated earlier, to prevent staining, make sure you wash away all deposits, liquids, and other products which fall into the sink.

To extend the life of your sink a couple of times a year use a stone sealer on your onyx or marble sink. Sealers are typically available in any of the large home improvement retailers or tile and countertop stores.
