Stone Vessel Sink

CARING GUIDE

Please follow these instructions to keep your sink looking new:

Cleaning the stone regularly. Use a soft cloth after each use to minimize scum build up. Never use an abrasive cleanser product or cleaning pads as they may damage the stone surface. For general cleaning, use mild soap and water. Natural stone cleaner may also be used. Re-apply natural stone sealer periodically to seal and protect the stone.

CAUTION - Do not use plumbers putty or any oil based sealers when installing the products as they may permanently stain the stones. Instead, we recommend using a bead of silicon.
