

## RINGS! WHAT SIZE? HOW MANY? METAL OR WOOD?

### RINGS WITH FIXED EYLETTS ARE POPULAR AND EASY TO INSTALL

The fixed eyelet rings can be sewn directly onto the draperies; and *SIMPLY* slid onto the pole or rod.

### RINGS WITH CLIPS NEED NO SEWING

The clip rings can be placed on the pole or rod before attaching the draperies.

As a general rule it is *7 RINGS* per 50" panel.

As a general reference, a *POLE* is wood and a *ROD* is metal.

Metal rings are used on both metal and wood installations; however, wood rings are *rarely* used for a metal installations.

Rings should have a larger inside diameter (ID) than the pole or rod being installed  
The package will indicate which pole size the rings are designed

A 1" or 1 3/8" pole/rod will fit a wood or metal set of rings with an inside diameter (ID) of 1 1/2"

A 2" or 2 1/4" pole/rod will fit a wood or metal set of rings with an inside diameter (ID) of 2 3/4"

The distance between each ring can vary greatly; any distance for 4" to 9" can be used. The variables come from the design of the draperies and the weight of the fabric.
