

USE AND CARE MANUAL

BARN PROS ENGINEERED WOOD GARAGE PACKAGES

Use and Care Manual for Barn Pros Workshop and Garage Packages

Barn Pros quality workshop and garage buildings are designed to provide years of use for the homeowner provided the building is constructed in accordance with modern building practices and regular maintenance is given.

Prior to purchase

Before purchasing please check with your local building authority to obtain necessary permits and building criteria, review possible site zoning, foundation and building requirements or restrictions (including, but not limited to: frost depth, soil-bearing pressure, drainage, etc.).

Experience Required

Building construction experience is required to assemble this building package. It is recommended that a professional contractor be hired to construct if the purchaser is not qualified.

Siding

It is recommended that the exterior siding of your garage or workshop be treated as soon as possible or no longer than two weeks after installation. Please refer to manufacturer's specifications for complete use and care information.

Roofing and Downspouts

To prolong the lifetime of your roof; keep roof, downspouts and gutters free of debris and clear of overhanging branches.

Windows, Doors and Garage Doors

Please refer to manufacturer's recommendations for use and care for all windows, entry doors and garage doors. For additional use and care information please refer to manufacturer's specifications.

Vegetation and Debris

It is important to keep vegetation and debris from the building exterior. Prolonged exposure to moisture caused by contact can cause deterioration of the siding, doors and trim.
