

Windblock®- Rafter Infiltration Block

Provides the best moisture and air infiltration seal between the rafter vent and wall top plate.

Works well with Durovent® and proVent® to provide a moisture-impervious vent and block system.

- Polyboard material is waterproof and prevents moisture infiltration
- Secures vent in place eliminating blow-out during construction
- Blocks moisture from exterior and acts as an insulation stop for interior
- **Great option for both 16" and 24" on-center applications**
