

Transparent Squirrel Baffle

Model #340

For Hanging Feeders

1. Insert and screw hanging hook together through Center Guide in Baffle Hub. (See illustration to the right.)
2. Place Baffle over the Baffle Hub as illustrated.
3. Hang feeder approximately 8 to 10 inches from bottom of hook to the feeder top. Allow the Baffle enough room to tilt past the outer edge of the feeder.

For Pole Mounted Feeders

1. Important! Punch out Center Guide by placing hub (see illustration to the right) on a firm surface. Then by using a screw driver or other blunt instrument, break out the Center Guide.
2. Insert and start the three Locking Screws per illustration. Slide Baffle Hub onto pole at an approximate height and tighten the Locking Screws to temporarily hold the hub in place.
3. Lower Baffle into place over Hub.
4. Set feeder onto pole. Loosen Screws and slide Baffle Assembly into position per illustration below. Tighten Locking Screws securely.
