

USE & CARE MANUAL

THUJA GREEN GIANT

(Thuja Standishii x Plicata)

PLANTING GUIDE:

STEP 1) First, decide on a planting location. Consider carefully what kind of sun, soil, and growing-space your tree or shrub will need.

STEP 2) Once you've located the perfect spot, the hole you are digging must be at least double the width and as deep as the root system you are planting.

STEP 3) The top of the root system should be level with the ground. Before placing the tree or shrub in the hole, use your hands to gently break up the root system.

STEP 4) Once the tree is in place, backfill the hole with native soil and any leftover potting material.

STEP 5) Pack down the soil to eliminate any air pockets.

STEP 6) When finished, water thoroughly.

PLANTING CARE:

Plant your Thuja Green Giant in an area with well-drained soil and where it will receive about six hours of direct sunlight each day. Water regularly after planting, making sure to give the tree a deep watering. Try running a slow hose over the roots for an hour or two to accomplish this. While you should fertilize your Green Giant about three times a year, it needs little pruning. Simply remove any dead limbs.
