

Waterfall Installation Instructions

ADDING A WATERFALL

To get started screw the waterfall attachment into the waterfall where the hole is located (see blown up picture in diagram). Once the waterfall attachment is in place use the clamps to attach the tubing to the attachment (see below diagram). You must cut the tubing to the correct length before attaching to the pump to prevent kinking, and allow free water flow. Follow the pump instructions to assemble the pump and attach it to the other end of the tubing.
