

SWIVEL HOOK

Important Assembly Notes:

Properly installed, this swivel system is a strong, quiet mounting solution for a hanging chair. It is supplied with four (4) 5/16" x 2" lag screws which may be used for a typical installation. It may be that alternative fasteners would be better suited to your installation situation. It **MUST** be installed level and secured to a structurally sound framing member or other mounting location that is suitable for the loads of a hanging chair and occupant. Because of the wide variety of installation situations, it is impossible for us to advise on proper mounting. You must be sure you are capable of choosing a suitable mounting location and method.

If you have any doubt of your ability in this regard, you should seek experienced, competent, professional assistance. Failure to do so could result in serious injury.

Hammocks, Hanging Chairs & Children:

Hammocks and hanging chairs are wonderful for peace and relaxation, but they are **NOT** a toy! They are **NOT** a swing!

Children should only use with close adult supervision.

Weight Limit 250 lbs.
