

Granite Tile Care and Use

Thank you for purchasing our granite tiles. Proper maintenance procedures play an important role in the upkeep of all floors. A well-maintained floor contributes to the lasting beauty of your project.

- As with any natural stone products, granite tiles vary in composition, color, texture and finish.
- To protect your installation, it is recommended to seal the grout using a grout sealer.
- Natural tiles should be sealed with 2 to 3 applications of sealant after installation and depending on traffic and usage, should be reapplied periodically.

After sealing, granite tile surfaces are very easy to maintain.

- For general care, pebble tile floors should be swept with a soft bristle broom.
- For any spills or dirt, gently wipe immediately with a damp cloth.
- To clean surfaces use warm water and a mild liquid soap. Never use acid cleansers or abrasive chemicals on stone. It is recommended to test a small area with the cleaner being used prior to using. Always follow recommendations and instructions from the cleaning product manufacturer.
