

Use and Care

All products manufactured by Element Fire Glass are for the use in any indoor/outdoor propane or natural gas powered fire unit.

Simply pour fire glass over your burner evenly. It is recommended to pour a minimum of 2 inches of glass over your burner to allow the gas to filter through the glass creating a beautiful flame.

All of Element Fire Glass's products can be used as landscape glass for faux river beds, water features, and special designs.

Little to no care is required for maintaining your fire glass. You may sprinkle with water for an instant shine. Sun covers are recommended if used outside in prolonged sun exposure.
