- Improves Clothing UPF Rating to 50+
- Blocks UV from Passing through Clothing
- Reduces Sun Exposure
- No Odor, No Yellowing, No Stiffening

Ray Bloc for clothing

Spray on Sunscreen for your Clothing

Ray Bloc for Clothing is an advanced water-based formula that is sprayed onto clothing to protect the wearer from harmful UVA and UVB radiation. Ray Bloc works to increase the UPF rating and reduce your UV radiation exposure which can lead to premature aging, wrinkling, skin damage and skin cancer.

HOW DOES RAY BLOC FOR CLOTHING WORK?

Similar to how sunscreen works to protect the skin, Ray Bloc works to prevent UV radiation from passing through the fabric by both reflecting UV radiation and by converting harmful UV rays into other forms of harmless energy.

WHY IS RAY BLOC SUPERIOR?

Ray Bloc for Clothing is specifically formulated to last through numerous wash cycles, dries odor free and will not affect the color, feel, flexibility, or breathability of the treated fabric.

Contact us today to learn more about how Ray Bloc can keep you and your clothing protected!
