

FOR PROVEN PERFORMANCE

TRUST THE GRIP OF THE SURENAIL STRIP[®]

SURENAIL[®] TECHNOLOGY

Only On Duration[®] Series Shingles

THERE'S A LINE BETWEEN A GOOD SHINGLE AND A GREAT SHINGLE.®

It's the nailing line on your shingles

The difference between a good shingle and a great shingle is having SureNail® Technology, only available from Owens Corning on Duration® Series shingles. Patented SureNail® Technology features a wide, highly visible engineered fabric strip in the nailing zone for a consistent, quality installation, and Triple Layer Protection® for outstanding gripping power.

Why should you care about the nailing line?

Even the best shingle can't perform right if it's not installed properly. And your shingles may not even be covered under the warranty if they aren't fastened in the right place.

9 OUT OF 10 CONTRACTORS AGREE

Contractor opinion carries a lot of weight. In a recent contractor survey, 9 out of 10 contractors* agree that versus other architectural shingles:

- SureNail® Technology provides the most visible nail zone in the industry
- SureNail® Technology provides greater nail pull-through protection
- The wider common bond in the Triple Layer Protection® of SureNail® Technology provides the greatest fastening power

In fact, 98% of contractors say, "With SureNail®, I know exactly where to nail." It's easy to see why contractors feel Duration® Series shingles with SureNail® Technology are the most preferred for installation and the most reliable shingle on the market.

ULTIMATE PROTECTION

DURATION® SERIES SHINGLES

with SureNail® Technology
with Triple Layer Protection®

Excellent Adhesive Power

Helps keep the shingle layers laminated.

Outstanding Grip

The SureNail® strip enhances the already amazing grip of our proprietary Tru-Bond®** sealant for exceptional wind resistance of a 130-MPH wind warranty.†

Breakthrough Design

Patented SureNail® Technology** is the first and only reinforced nailing zone on the face of the shingle.

"No Guess" Wide Nailing Zone

This tough, engineered woven-fabric strip is embedded in the shingle to create an easy-to-see strong, durable fastener zone.

Triple Layer Protection*‡

A unique "triple layer" of reinforcement occurs when the fabric overlays the two shingle layers, providing increased protection against "nail pull" from the wind.**

Double the Common Bond

SureNail® features up to a 200% wider bond between the shingle layers in the nailing zone‡ over standard shingles.

THE PROOF IS IN THE PERFORMANCE

Proven performance is what truly sets Owens Corning® architectural shingles above the rest. We brought our Duration® Series shingles into the lab to test their performance against wide, single-layer nail zone shingles in three major strength tests[§]. And in each test, the Triple Layer Protection® of SureNail® Technology outperformed the competition where it matters most—in the nailing zone.

vs. top two competitors

NAIL PULL-THROUGH RESISTANCE

The shingle's resistance to getting pulled off the roof in high wind conditions.

Up to

2.5X
BETTER

NAIL BLOW-THROUGH RESISTANCE

The shingle's resistance to contractors blowing through the shingle while fastening to the roof.

Up to

9X
BETTER

DELAMINATION RESISTANCE

The shingle's resistance to its layers slipping apart after they are installed on the roof.

Up to

2X
