

## **Pressure Treated Care Sheet**

**Please retain this document for future reference**

This product should provide years of enjoyment.

### **Maintenance and Protection**

In general, pressure treated products require very little care and maintenance. To clean, wash with a mild soap and water solution, rinse and dry thoroughly with a soft cloth or sponge. Do not use bleach, acid or other solvents. Also, periodically check that all the fixings are properly secured.

Pressure treated products can be painted or stained if the customer wishes to but no preservative treatment is necessary.
