Hardwood Flooring

American Vintage™ Scrape

Authentic American style for your home

Presenting American Vintage Scrape, an authentic textured hardwood collection that captures the essence of beautiful American craftsmanship. This exclusive hardwood collection is manufactured by Bruce®, the #1 selling brand of hardwood floors.

Individually scraped 5" wide planks in random lengths provide ageless charm to any décor, creating the custom look of a vintage hand-scraped floor for less.

- Deep, rich colors that emphasize the character of wood
- Advanced urethane finish provides scuff and scratch resistance
- Proudly made in the USA

How to Choose Hardwood Flooring

All colors are available in either solid or engineered hardwood

- 1 Select style and color – a rich palette of 15 vivid colors ranging from natural to deep, dark mocha

- 2 Select your construction – solid or engineered construction for use in any room

Solid

5" width, 3/4" thick

Solid hardwood flooring is designed for installation on or above ground level and is installed by nailing boards to a wood subfloor.

Engineered

5" width, 3/8" thick

Engineered hardwood flooring is designed for installation on all levels of your home including below ground level, such as your basement. May be installed by glue-down method or stapled to the subfloor.

Subfloor Construction

Depending on whether you choose solid or engineered hardwood, they may be installed using glue, nails, or staples or may interlock to "float" above your subfloor. Glue-down and floating installations are usually over concrete, vinyl and other non-nailable surfaces. Nails or staples are used when installing over wood subfloors.

Durability

American Vintage™ Scrape

With advanced urethane finish

- Provides superior scratch and stain resistance compared to standard finishes*
- Delivers all the performance needed to resist everyday traffic and spills

50 Year
Residential
Warranty

50 años de
garantía residencial

MADE IN USA

*Standard finishes are site-applied urethane finishes

Care and Maintenance

To preserve the beauty of your floor, sweep or dry mop as needed. Periodically clean with Bruce® Hardwood & Laminate Floor Cleaner and the Bruce Swivel-Head Mop with reversible terry cloth cover. Simply spray and mop. Clean up spills immediately and follow with the recommended floor cleaner.

Environmental Sustainability

As the world's largest hardwood flooring company, Armstrong® (Bruce® is an Armstrong brand), has a vested interest in protecting forests where our raw materials come from.

Our strategy requires that we protect the communities where we extract, process, and manufacture our wood products. Our goal is to support sustainable forest management practices, globally, including planting trees to replenish what we harvest.

Sustainability Features

- Forest Stewardship Council (FSC) certification available for selected solid and engineered hardwood products
- Our engineered wood flooring is certified as a low-emitting (low-VOC) wood product

Quality Craftsmanship

The painstaking attention to detail that begins with the design process continues throughout every stage of manufacturing from lumber selection to final finishing. Rigorous quality control, including more than 75 inspections throughout the entire manufacturing process, guarantees floors that install precisely and look beautiful for a lifetime.

RAW MATERIALS: Armstrong® starts by inspecting and grading every board to ensure each will meet our rigid quality standards. Only the best pass our inspection.

PRECISE DRYING: A key step in preparing the wood, we dry our lumber in state-of-the-art kilns that are constantly monitored by highly trained technicians to ensure the boards meet the specifications required to produce superior quality flooring.

GRADING STANDARDS: Each board is meticulously graded and any unacceptable material is removed before milling.

PRECISION MILLING: All planks are made straight, sanded to a consistent thickness, and machined to create a perfect tongue and groove fit. Adhering to the strictest standards during the milling process ensures reliable quality and consistency of all floor planks, from carton to carton. The planks install easily and fit together snugly for a finished floor that is stable, even and consistent.

ADVANCED COLOR MANAGEMENT: Armstrong uses computerized color monitoring systems to assure the highest level of color consistency from board to board and carton to carton, catching and correcting variations too subtle to be distinguished by the human eye.
