

Gronomics products are handcrafted in the USA from 100% Western Red Cedar. Beautiful, durable and naturally resistant to insects, warping and rot. Cedar is an excellent choice for garden beds and outdoor furniture. Western Red Cedar is a soft wood and cleaning and basic maintenance should be done with care.

Western Red Cedar in its natural unfinished state has a richly textured tactile grain combined with a glowing palette of warm, mellow tones ranging from light amber to deep honey brown. Because of the inherent nature of Western Red Cedar to withstand insect attack and the outdoor elements Cedar does not require a finish to keep its structure over the years. Without using a finish, overtime the colorful tones of the wood slowly weather to a silver-grey patina and the grain of the wood will become slightly raised.

If you would like to preserve the wood, enhance it's beauty and maximize its lifespan we suggest using our Gronomics Cedar Garden Bed Oil. It is a blend of natural vegetable and citrus oils and is designed specifically for Cedar garden beds and outdoor furniture. Our Cedar Garden Bed Oil is food contact safe and easy to apply and maintain - it preserves and protects the wood. We suggest applying the oil regularly or whenever the furniture or garden beds appear faded or dry.
