

# FAQ

## Chain Link Fence Gate

**Q:** How much space do I allow for my gate?

**A:** The gate opening should allow space for the gate itself as well as 2" on each side for gate hardware. If purchasing a driveway gate, the gate opening should allow space for the two gate panels as well as 2" on each side for the gate hardware and 2" between the panels for the latch

**Q:** Does my gate come pre-assembled with hardware?

**A:** Yes your gate comes pre-assembled. Your gate will come with hardware for the gate only. The hardware for the posts and the posts themselves will need to be purchased separately. The only gates that do not come preassembled are the adjustable gates as these will need to be adjusted to fit your gate opening.

**Q:** Can my gate be installed on a wooden post?

**A:** While yes, your gate can be installed on a wooden post, we recommend using the appropriate chain link gate hardware and posts. If you are attaching the gate to a wooden post you would need to purchase a lag screw hinge and a frame hinge.

**Q:** Can I combine my drive way gates to make one long gate?

**A:** There is no way to attach the two panels together so you would need to order a single panel through the THD special order program.

**Q:** Does my gate come in different colors?

**A:** Besides the galvanized version, the chain link gates come in a black, green, and white vinyl coating. Check with your local store to see if your color is in stock or can be special ordered.
