## Straight Picket

Wide Straight Picket  
(Narrow Straight Picket not shown)

- Install Picket Caps:** Carefully apply PVC adhesive to the inside of the un-notched end of the picket and insert picket caps into this end of the picket, ensuring a tight fit between the cap and picket. If needed, tap the picket cap into place with a rubber mallet.
- Align Pickets:** Line up the pickets for the section so that the notched ends are facing the same direction.
- Install Pickets into Rails:** Slide the pickets through the top rail, one at a time, ensuring the larger routed holes are on the underside of the top rail, which eventually faces the ground. Then insert pickets one at a time into the bottom rail, until the notches are fully engaged. If necessary, use a rubber mallet to tap the pickets into place.
- Install Assembled Sections:** Position assembled fence sections so that rails align with pre-routed holes in posts. Starting with the left side of the section, insert rails into routed post holes, engaging the notches at the ends of the top and bottom rails. Swing the right side of the section into place, sliding the rails into the post, fully engaging the notched ends.
