

# 3M™ LeadCheck™ Swabs

**Easy to use.  
Instant results.**

**It's recognized.**

Since April 22, 2010, contractors performing renovation, repair and painting (RRP) projects in pre-1978 homes, schools and daycare facilities are required to be certified and follow lead-safe work practices. This EPA-issued RRP Rule is aimed at preventing lead poisoning.

When used by a certified renovator, 3M™ LeadCheck™ Swabs are EPA-recognized to determine that lead-based paint is not present on wood, metal, or drywall and plaster surfaces, making them an important tool when following the RRP Rule.

**It's simple.**

3M™ LeadCheck™ Swabs are disposable, convenient and simple to use. The entire test typically takes about 30 seconds. Just swab virtually any surface or material, including painted wood, metal, plaster or drywall. If the swab turns red, lead is present: **RED MEANS LEAD.™**

- EPA recognized\*
- Instant results using only a no-mess swab
- Easy, clean and contained
- Detects lead down to 600 ppm

3M™ LeadCheck™ Swabs are available in retailer and contractor packs. See last page for ordering info.

3M™ LeadCheck™ Swabs help certified renovators meet the requirements of the RRP Rule by making lead testing simple.

# 3M is leading the way in helping to prevent lead poisoning.

Lead poisoning can cause severe health effects, including damage to the liver, kidneys, brain, nerves, bones and blood. Children are especially at high risk. Lead in dust is the most common way people are exposed, especially during renovation or repair work.

3M™ LeadCheck™ Swabs are just one of a trusted portfolio of 3M™ Lead-Safe Work Products that includes respirators, coveralls, gloves, duct tape and more. So if lead is detected, we'll make sure everyone is protected while they finish the job.

- toilets

### Ceramic tile

- kitchens
- bathrooms
- hearths

### Brass

- key rings
- inner fixtures on faucets
- inner fixtures on well pumps

### Solder

- copper pipes leading to tap
- stained-glass windows

## How to use 3M™ LeadCheck™ Swabs:

Read full instructions found in package before use.

Each 3M™ LeadCheck™ Swab contains two crushable vials, one with a lead-reactive dye, the other with a pre-measured activator solution. Crush the vials to mix the contents, then bring the tip into contact with the surface to be tested.

## ACTIVATION:

- one** **CRUSH.** Squeeze and crush points marked “A” and “B,” located on the barrel of the Swab.
- two** **SHAKE AND SQUEEZE.** With the Swab tip facing down, shake twice and squeeze gently until the yellow liquid comes to the tip of the Swab — it’s now activated for testing.
- three** **RUB.** While squeezing gently, rub the Swab on the test area for 30 seconds. If the tip turns red or pink, lead is present.

Each 3M™ LeadCheck™ Swab has no shelf life. EPA recognized when used by a certified renovator to determine that lead-based paint is not present on wood, metal, or drywall and plaster surfaces.
