Electrical Information:

The cord length of this appliance was selected to reduce Safety Hazards that may occur with a long cord. Extension cords are available and may be used if care is exercised in their use. If an extension cord is used: (1) the marked electrical rating of the extension cord should be at least as great as the electrical rating of the appliance, and (2) the longer cord should be arranged so that it does not drape over the counter or table top where it could be accidentally pulled off the counter or table or tripped over.

Certain models of the appliance may have a polarized plug (one blade is wider than the other). This plug is intended to fit into a polarized outlet only one way. WARNING

Electric shock hazard. Use with adequate electrical system. Do not use if cord or plug is damaged.

WARNING: All metal items in the oven, such as the Liner Pan and Cooking Rack, can get very hot during cooking. Please be careful when removing these items from a hot oven. Always wear oven mitts or use pot holders. Allow Liner Pan and Cooking Rack to cool completely before cleaning. The Dome opening may expand slightly when hot. In rare instances, the power head could detach itself from the Dome completely, thereby causing hot air to escape from between the Dome and the power head.

NuWave™ Oven Pro Plus Assembly Guide

Connecting Power Head to Dome

1. Place Power Head on rim of the Dome
2. Lock it into place by rotating the Power Head clockwise until the locking lugs are engaged.

Assembling the Full NuWave™ Oven

Place Base Tray on a firm, stable surface, but never on a stovetop.

Place Liner Pan inside Base Tray. When doing so, make sure the handles are in the dropped down position. If the handles are not fully dropped, the Dome may not fit over the Base properly.

Place dual level Cooking Rack in the Liner Pan according to cooking requirements.

Place food on Rack.

Place Dome with Power Head over food, connecting to the Base Tray. The Dome should fit evenly onto the Base.

Set cook time and temperature according to recipe requirements.

BEFORE USING:

Prior to the first use of your NuWave Oven, wash Dome, Liner Pan, Base, and Cooking Rack in warm soapy water or run through a dishwasher cycle.

IMPORTANT - Do not wash or immerse Power Head in water or cycle through dishwasher. The outer surface may be cleaned by wiping carefully with a damp dishcloth or sponge.

How to Install and Use Dome Holder

Make sure the Power Head is tightly locked onto the Dome. The whole assembly can be easily lifted and put aside as shown in steps 1, 2 and 3.

Step 1

Place Dome Holder under either side of Base handle.

Step 2

Make sure both feet of the Dome Holder are situated inside the handle, and the Dome Holder is resting horizontally on a flat surface.

Step 3

Place the assembled Power Head and Dome at a 45° angle on the holder as shown.

Note: Do not leave Dome in Dome Holder for an extended period of time.

Cooking Instructions

Only lift Dome by the handles on the Power Head. Once the Power Head and the Dome are assembled, the handles will allow you to lift both together when removing or checking food. When removing Liner Pan after cooking, be extremely careful and always use oven mitts.

For best results, follow the time, temperature, and Cooking Rack height instructions provided in the cooking chart and recipe book.

No preheating required.

Models Containing 3-inch Extender Ring

If your NuWave Oven included a 3-inch Extender Ring, the Ring can be used for multi-level cooking or for oversized food items that may not fit under the standard Dome. Generally, foods (such as a ham or turkey) that exceed 10 pounds would require the use of the Extender Ring for optimal cooking.

Directions

The Extender Ring should be positioned between the original Dome and the Base. The addition of the Extender Ring will expand the NuWave Oven's available cooking space by approximately 440 cubic inches when using the 3-inch Ring. When adding the Extender Ring to the NuWave Oven, make sure it fits snugly onto the Dome. When the Ring is placed under the Dome incorrectly, the overlapping edges will not fit together properly. Please use caution when using the Ring. If improperly used, heat or steam could escape from Oven which could cause burns or alter the necessary cooking times of your foods. The Extender Ring should only be used as an accessory item with the NuWave Oven. It is not intended to serve as a replacement for the Dome, Base, or any other components of the NuWave Oven.

General Rules

- Place foods that require the longest cooking time on the rack closest to the heating element (ex. potatoes, carrots), and place soft vegetables on the lower racks (ex. mushrooms, tomatoes).
- When choosing the multi-level cooking option, use food combinations that take roughly the same amount of time to prepare. Examples: pork or chicken and potato wedges; fish and stewed tomatoes; or frozen beef with baked potatoes.
- If top layer foods finish cooking earlier, remove rack(s) from above and continue cooking bottom foods until done.
- Use shallow or oven-safe dishes for cooking.
- To warm bread, place it on the bottom rack or Liner Pan and cover. To bake bread, place bread on the top rack.

Models Containing Extender Ring Kit

2-inch Rack

The 2-inch Rack for the NuWave Oven Pro Plus can be used in a variety of ways.

- It can be the primary rack with or without the Extender Ring.
- With the Extender Ring, it can be positioned on top of or under the 3-inch rack for more multi-level cooking space.
- Without the Extender Ring, the 2-inch rack can also facilitate multi-level cooking by creating a third cooking surface between the Liner Pan and the bottom of the 3-inch rack.
- You may use two extra 2-inch racks above and below the 3-inch rack, which is especially useful for dehydrating.

10-inch Enamel Baking Pan

2-inch Cooking Rack

3-inch Stainless Steel Extender Ring

Note: The 2-inch rack is only to be used in the positions and purposes shown below. Any other uses may affect cooking time and quality.

Care and Use

The Stainless Steel Extender Ring should not be cleaned with any harsh abrasive, but it is dishwasher safe.

3-inch Cooking Rack

1-inch Cooking Rack

2-inch & 1-inch Cooking Rack

2-inch & 3-inch Cooking Rack

3-inch & 2-inch Cooking Rack

CAUTION

Do not touch the Dome or any surface on the cooking area during operation. The air inside the Dome can reach 350°F (177°C) which makes the surface very hot and may cause burns. Do not open the Dome or remove the power head while the NuWave Oven is operating. Turn off the power before removal.

General Use Instructions

- Do not place the Pro Plus or any associated parts directly on your stove top, inside a conventional oven or in contact with any other direct heat source. Damage may result.
- Make sure the unit is plugged into a properly grounded outlet and that the cord is not touching any heated objects.
- Be certain that Liner Pan has been properly placed within the Base.
- Metal, glass or silicone dishes and pans, and all other oven-safe materials used in a conventional oven may be utilized in the NuWave Pro Plus.
- Always place the Dome back onto the Base when finished cooking.

When cooking at temperatures between 325°F and 350°F, the maximum cooking time is 2 hours. If a cooking time longer than 2 hours is entered when cooking in this temperature range, the NuWave Oven Pro Plus will default back to 2 hours.

2. To change the cooking temperature, press Cook Temp. The LED Display will display 350°F (177°C) and TEMP will be flashing.

Delay stops blinking and remains on until time expires. It is possible to delay a program for up to 9 hours and 59 minutes. If the delay countdown reaches 0, the Oven will beep to signal the end.

Reheat Function

The default setting is programmed at 350°F for 4 minutes. This function is perfect for reheating single portion-sized foods. To activate the reheat function, make sure programming is clear. The LCD display will read 0. Press the Reheat Button. This will activate the default setting. Press Start. Oven will “beep” 3 times once time has expired. For example, if you are warming leftover pizza, simply place the slice on the 3-inch rack, press Reheat, then Start. If you are warming a rice or noodle dish, place a single-serving amount in an oven-safe container (glass, metal, silicone). For softer rice or noodles, add a sprinkle of water and cover with foil.

Warm Function

After the initial cooking time is complete, you may keep foods warm. When entering Warm function, it will always be the last function. The default setting is programmed at 155°F for 2 hours. When the Warm Button is pressed, Warm will be illuminated and Time will blink on the LCD display; 2:00 will be displayed, then press Start. To change the time, Press Cook Time, enter the desired time and proceed. You may program the oven to keep foods warm for up to 9 hours and 59 minutes. Once the initial cooking cycle is finished, the Oven will “beep” twice before switching to the Warm function.

CLEANING AND CARE INSTRUCTIONS

Unplug the unit before cleaning. The Dome and all other parts, except the Power Head, are dishwasher safe. Protect the metal and plastic surfaces; do not use abrasive cleaners or scouring pads. Clean after each use. The outer surface of the Power Head can be cleaned by wiping with a damp cloth.

IMPORTANT - Do not wash or immerse Power Head in water or cycle through dishwasher. The outer surface may be cleaned by wiping carefully with a damp dishcloth or sponge.

IMPORTANT TIPS:

1. Check the power outlet to ensure proper operation. NuWave Oven uses up to 1500 watts/12.5 amps. Do not operate the unit simultaneously with other major appliances plugged into the same outlet.
2. Check the cooking temperature if Oven is cooking too slowly.
3. The electrical plug must be properly inserted into the outlet.
4. Always turn off and unplug the oven before washing.
5. Moisture may accumulate inside Dome if food is not promptly removed once cooking time has expired. Steam/moisture buildup can be avoided through prompt removal of cooked foods.
6. Do not rest Dome in Dome Holder for extended period of time, as it could warp. Always replace Dome on Base Tray promptly after removing food.

**THE
NUWAVE OVEN
COMPLETE
COOKBOOK**

General Tips

This recipe book contains valuable information that will help you start incorporating the NuWave Oven Pro Plus into your daily life. We've provided easy-to-prepare recipes, along with helpful tips at the beginning of each section that will help you achieve perfect cooking results every time. Also visit NuWaveCookingClub.com for other great tips and instructional videos.

Metal containers, aluminum foil or any oven-safe dish can be used in the NuWave Oven Pro Plus. The infrared rays will not penetrate through these materials. Lightweight aluminum foil works best for lining shallow dishes and pans. Cover food loosely with aluminum foil to protect from browning more than preferred. Keep in mind that heat will still circulate, but the foil may slow the cooking time of the food beneath.

Steam buildup can occur when cooking foods that contain a lot of moisture, like vegetables or fish. When your cooking cycle is complete, please remember to lift the Dome so that steam is channeled away from your face. To keep prepared foods crisp, such as egg rolls, chicken tenders or pizza, remove the Dome immediately after cooking.

Timing is the key to perfection with the NuWave Oven Pro Plus. Keep in mind that all cooking guidelines are just that, and may need to be adjusted depending on the specific situation.

When cooking larger dishes such as roasts or other foods with varying thickness, suggested cooking times may need to be extended. Cook in 3-minute increments and check after each interval.

Using a meat thermometer is always essential for checking the internal temperature of the meat.

Tips for Breakfast

Bacon: Cook at 350°F on the 3-inch rack for 5-6 minutes per side. Sprinkle on brown sugar 5 minutes before finished for a sweet taste. For easy cleanup, place aluminum foil in the Liner Pan. Once the grease solidifies, discard the foil.

Egg substitutes can be used in any recipe. 1 egg equals ¼ cup egg substitute.

To warm pre-made muffins, breads or pastries, simply wrap in aluminum foil and place in the Liner Pan during the last 2 minutes of cooking time.

Toast bagels, English muffins or bread by placing on the 3-inch rack and cook at 350°F for about 3-5 minutes.

Tips for Dehydration & Nuts

Roasting Nuts:

Use pan on 3-inch rack and cook at 350°F.

Pecan or almond pieces, 3-4 minutes.

Coconut, unsweetened and shredded, 1-2 minutes.

Whole nuts can be roasted in two layers: For example, start one layer in Liner Pan for 6 minutes and then place another pan, filled with nuts, on 3-inch rack and continue for another 5 minutes. This doubles the capacity!

Dehydrating:

Alternate all foods when dehydrating.

Non-stick cooking spray will help avoid sticking. When dehydrating, keep Dome open slightly to let moisture escape. Remove Dome promptly once your cycle has completed to ensure that moisture does not build up.

Adding foods to the 3-inch rack as well can increase amounts made.

You need to alternate racks occasionally for even dehydrating times.

Store all dehydrated foods in air-tight container in cool pantry.

Fruits should be washed (minus bananas) and patted dry.

Rub fresh lemon over apples to avoid browning.

Mushrooms - Dehydrate at 120°F for 4 - 5½ hours

Summer squash - Cut ¼-inch slices, dehydrate at 120°F for 4½ - 5 hours

Tomatoes - Halve and removes seeds, dehydrate at 120°F for 7½ - 8 hours

Sweet Peppers - Cut into ½-inch long strips, dehydrate at 120°F for 7 hours

Herbs - Wash and dry. Leave on stems and place on racks. Place herbs on racks and dehydrate at 120°F for 1 hour for more delicate herbs like thyme, and cook for 1½ hours for hardier herbs like rosemary. Place rack over herbs to prevent herbs from flying around.

Tips for Vegetables

Glass, oven-safe dishes are denser than metal, foil and silicone. Metal and foil also reflect heat so this will heat faster than glass, which absorbs heat. Silicone will absorb the heat instead of reflect, however it is thinner than oven-safe glass, so silicone will decrease the cooking time compared to an oven-safe glass dish.

Keep in mind that cooking times may vary by several minutes depending on the size of the vegetables.

Always select the freshest produce. Always wash vegetables thoroughly.

Different types of cooking vessels will affect cooking times in different ways. Foods cooked in denser dishes require longer cooking times. Foods cooked in larger, shallow dishes require shorter cooking times. Foods cooked in deeper dishes require longer cooking times.

Tips for Poultry

Poultry should be turned halfway through the cooking process for even browning. When adding your favorite dry seasonings to frozen poultry, lightly brush with oil or sprinkle cold water on it beforehand; this will allow seasonings to adhere.

Brush sauces onto fresh poultry so the seasonings bake right in.

To save time and to add extra flavor, marinate poultry in a sealed bag or container and freeze into separate servings. When ready to prepare, refer to the Quick & Easy Cooking Guide for appropriate cooking times.

To prevent poultry from browning too fast, place aluminum foil over the top. Be sure to secure the aluminum foil to the sides of the Cooking Rack or extend the aluminum foil outside of the oven. This will prevent the internal fan from blowing the aluminum foil around during the cooking process.

Turkey Tip: Start cooking the turkey, breast side down, for the first half of the cooking process. When you flip the turkey breast side up, if there are giblets inside the turkey, they should be thawed enough for easy removal at this time. During the last 20-30 minutes of the cooking process, stuff the cavity with your favorite stuffing and resume cooking. **Poultry:** When completely cooked, white meat will be white; thigh meat near the bone will have no pink color, and the juices will run clear.

*Using a meat thermometer is essential for checking the internal temperature of the meat to ensure that it has been thoroughly cooked to 165°F.

Tips for Pork

For even browning, turn pork halfway through cooking process. To use your favorite dry seasonings on frozen meat, sprinkle cold water on it beforehand; this will allow seasonings to adhere.

Brush sauces onto fresh meats to infuse flavors.

To save time, and to add extra flavor, marinate pork in a sealed bag or container and freeze into separate servings. For appropriate cooking times, refer to the Quick & Easy Cooking Guide.

Place aluminum foil or parchment paper loosely over the pork to prevent overbrowning. Be sure to secure foil to sides of rack or extend it outside the oven to prevent the NuWave Pro Plus Infrared Oven's internal fan from blowing the foil around during the cooking process.

To Cook a Ham

The NuWave Pro Plus Infrared Oven can cook up to an 8-pound boneless ham, or a 14-pound ham if using the NuWave® Extender Ring.

Place ham on the 1-inch rack. Add glaze during the last 10 minutes. If the ham is over browning, place aluminum foil or parchment paper over the top. Cook at 300°F for 12-14 minutes per pound.

- Using a meat thermometer is essential for checking the internal temperature of the meat to ensure that it has been thoroughly cooked.

Today's pork is very lean and should not be overcooked. To check accurate doneness, use a digital cooking thermometer. The National Pork Board follows the guidance of the U.S. Department of Agriculture, which recommends cooking roasts, tenderloins and chops to an internal temperature of 145°F, followed by a three-minute rest time, resulting in a flavorful, tender and juicy eating experience. Ground pork, like all ground meat, should be cooked to 160°F. Pre-cooked ham can be reheated to 140°F or enjoyed cold.

Tip: For frozen ham, cook for 18-20 minutes per pound.

Tip: With the Extender Ring, you can make up to a 14-pound ham.

Tip: If you like your ham breaded, add 2 teaspoons dry mustard, 1 teaspoon fresh ground pepper and 1½ cups plain breadcrumbs along with sugar and remaining cola. The cooking times will not change when adding extra ingredients.

Tips for Lamb

To use your favorite dry seasonings on frozen meat, sprinkle cold water on it or lightly brush oil on beforehand; this will allow seasonings to adhere. Brush sauces on fresh meats to infuse flavors. To save time, marinate in a sealed bag or container and freeze into separate servings. When ready to use, refer to the cooking guide. Soak lamb in 1 cup milk, to tone down gaminess. Use a meat thermometer to ensure lamb is properly cooked.

Roasting Recommendations

(Temperatures listed below are based on internal temperatures)

Lamb Cuts	135°-145°F (63°C)
Lamb Roasts	145°-150°F (66°C)

(Boneless)

Rare	120°-140°F (60°C)
Medium-Rare	140°-150°F (66°C)
Medium-Well	150°-160°F (71°C)

* Using a meat thermometer is essential for checking the internal temperature of the meat.

Tips for Dessert

Many recipes in this section call for the use of the Silicone Baking Ring, 8x8-inch Silicone Baking Pan, and Silicone Cupcake Liners, all of which can be found in the NuWave Baking Kit. If you'd like to purchase the NuWave Baking Kit and take your baking to the next level, visit www.NuWaveNow.com.

When converting your own recipe to NuWave Pro Plus Oven methods, it is recommended to use the Extender Ring, 1-inch rack and bake at 300°F the first time. You can always adjust from there.

The use of glass and ceramic pans will increase the required cooking time. Recipes in this book have been tested in silicone and metal pans.

For multi-layer baking, use the Silicone Baking Ring. Recipe temperatures will typically need to be set at 250°F rather than 300°F. Remember to adjust accordingly when using your own recipes.

Because the NuWave retains the moisture in baked goods, your recipe will stay fresh longer than recipes made in conventional ovens when stored properly.

For converting recipes requiring a 9x13-inch pan, you can usually substitute two pans using our 8x8-inch square silicone baking pan, with divider in place, slicing into finger size bars.

For cakes, cookies, muffins and more, adding the Extender Ring will control even browning. Depending on recipe directions, place cookies around perimeter of the Liner Pan (avoid placing cookies directly under Power Head).

For bottom crust pies, bake crust alone at 350°F for 15-20 minutes. Add pie filling and cook remaining time as directed.

If a recipe calls for a glaze, spread it on during the last 5 minutes to prevent overcooking.

Always check for doneness with a toothpick or fork. If additional time is needed only use 3-5 minutes increments.

The Silicone Baking Ring can be used for any foods you want to prevent from sticking to the rack.

Recipes that call for baking in our NuWave Silicone 8x8-inch Pan will require more time if you are using a smaller pan. Check for doneness with toothpick and 3-5 minutes at a time until desired doneness is reached.

Guía de Ensamble del NuWave™ Pro Plus Infrared Oven

Uniendo la Fuente de Potencia al Domo

1. Coloque la Fuente de Potencia en el borde del Domo
2. Asegúrelos girando la Fuente de Potencia en sentido de las manecillas del reloj hasta que los seguros embonen.

Ensamblando el NuWave™ Oven Completo

Coloque la Base sobre una superficie firme y estable.

Coloque la Cacerola dentro de la Base. Cuando lo haga asegúrese de que las asas estén en la posición hacia abajo. Si las asas no están completamente abajo, el Domo podría no embonar adecuadamente en la base.

Coloque la Rejilla para Cocinar de nivel dual sobre la cacerola en la forma en la que se necesite.

Coloque la comida en la rejilla.

Coloque el Domo y Fuente de Potencia al Domo sobre la comida, uniéndolo a la Base. El Domo deberá embonar suavemente en la base.

Programe el tiempo de cocinado y la temperatura de acuerdo a las indicaciones de la receta.

ANTES DE USARSE:

Antes de usar su NuWave Oven por primera vez, lave el domo, la cacerola, la base y la rejilla con agua tibia con jabón o lávelos en el lavavajillas.

IMPORTANTE- No lave ni sumerja la Fuente de Potencia en agua ni utilice el lavavajillas. La superficie externa puede ser limpiada cuidadosamente con un paño húmedo o una esponja.

Cómo Instalar y usar el Asa para el Domo

Asegúrese de que la Fuente de Potencia esté firmemente asegurada en el Domo. Entonces el ensamble completo podrá ser levantado fácilmente y separado como se muestra en los pasos 1, 2 y 3.

Paso 1

Coloque el Asa para el Domo debajo de cualquiera de los agarres de la base.

Paso 2

Asegúrese de que ambas puntas del Asa para el Domo estén puestas dentro del agarre y que el Asa para el Domo esté apoyada horizontalmente en una superficie plana.

Paso 3

Coloque el ensamble de la Fuente de Potencia y el Domo en un ángulo de 45° sobre el asa como se muestra.

Nota: No deje el Domo sujetado a la Asa por un periodo de tiempo prolongado.

Instrucciones para Cocinar

Levante el Domo solamente de los agarres de la Fuente de Potencia. Una vez que la Fuente de Potencia y el Domo estén ensamblados, los agarres le permitirán levantar ambos juntos para quitarlos o revisar la comida. Cuando quite la cacerola después de cocinar sea extremadamente cuidadoso y siempre utilice guantes para hornear.

Para mejores resultados, siga las instrucciones acerca del tiempo, nivel de potencia y altura de la Rejilla proporcionadas en la tabla de preparación y el libro de recetas. **No requiere de precalentamiento.**

Modelos que contienen el Aro Extensor de 3 pulgadas

Si su NuWave Oven incluye un Aro Extensor de 3 pulgadas, éste puede ser utilizado para cocinar en multiniveles o para piezas de comida demasiado grandes que no cabrían dentro del domo estándar. Generalmente las piezas (como jamón o pavo) que excedan las 10 libras requerirán de usar el Aro Extensor para cocinarlas óptimamente.

Instrucciones

El Aro Extensor deberá ser colocado entre el domo original y la base. La incorporación del Aro Extensor ampliará el espacio disponible para cocinar del NuWave Oven aproximadamente 440 pulgadas cúbicas cuando utilice el Aro de 3 pulgadas. Cuando añada el Aro Extensor al NuWave Oven asegúrese de que se ajuste bien al domo. Si el Aro es puesto en el domo incorrectamente, las orillas no se ajustarán adecuadamente. Por favor sea cuidadoso cuando use el Aro, ya que si se utiliza inadecuadamente, el calor o el vapor podrían escapar del horno lo cual podría provocar quemaduras o alterar los tiempos de cocinado necesarios para sus alimentos. El Aro Extensor sólo deberá ser utilizado como un accesorio para el NuWave Oven, no está diseñado para servir como un reemplazo del domo, la base u otro componente del NuWave Oven.

Reglas Generales

- Coloque los alimentos que requieran de mayor tiempo de cocción en la rejilla que esté más cerca del elemento de calor (como papas o zanahorias) y coloque las verduras suaves en las rejillas inferiores (como champiñones o tomates).
- Cuando elija la opción de cocinar en multiniveles, use combinaciones de alimentos que tomen aproximadamente el mismo tiempo para prepararse. Ejemplos: cerdo o pollo y rodajas de papa; pescado y tomates guisados; o carne de res congelada con papas al horno.
- Si los alimentos del nivel superior terminan de cocinarse más rápido, quite la rejilla(s) de arriba y continúe cocinando los alimentos de la parte inferior hasta que estén listos.
- Para cocinar utilice platos poco profundos o recipientes aptos para horno.
- Para calentar pan, colóquelo en la rejilla inferior o en la cacerola y cúbralo. Para tostarlo colóquelo en la rejilla superior.

Modelos que contienen el Kit del Aro Extensor

Rejilla de 2 pulgadas

La Rejilla de 2 pulgadas para el NuWave Pro Plus Oven puede ser usada en una variedad de formas.

- Puede ser la rejilla principal con o sin el Aro Extensor.
- Con el Aro Extensor puede ser colocada encima o debajo de la rejilla de 3 pulgadas para dar más espacio para cocinar en multiniveles.
- Sin el Aro Extensor la rejilla de 2 pulgadas puede también facilitar el cocinar en multiniveles creando una tercera superficie para cocinar entre la cacerola y la parte inferior de la rejilla de 3 pulgadas.
- Usted puede utilizar dos rejillas de 2 pulgadas extras sobre y debajo de la rejilla de 3 pulgadas, la cual es especialmente útil para deshidratar.

! PRECAUCIÓN

No toque el domo ni alguna otra superficie del área de cocinar mientras esté funcionando. El aire dentro del domo puede alcanzar una temperatura de Pro Plus 350°F (182°C), por lo que la superficie se encuentra muy caliente y puede causar quemaduras. No abra el domo o quite la fuente de potencia mientras el NuWave Oven esté funcionando. Apáguelo antes de retirarlo.

Panel de Control Digital en la Fuente de Potencia

Instrucciones Generales de Uso

- No coloque el Pro Plus o cualquier otra parte relacionada directamente en su estufa, dentro de un horno convencional o en contacto con alguna otra fuente de calor, ya que se puede dañar.
- Asegúrese de que la unidad esté bien conectada a una salida de tierra y que el cable no esté en contacto con ningún objeto caliente.
- Asegúrese de que la cacerola haya sido colocada correctamente dentro de la base.
- Los platos de metal, vidrio o silicón, así como las cacerolas y cualquier material apto para hornear que sea usado en un horno convencional, podrán también ser utilizados en el NuWave Pro Plus.
- Siempre coloque pronto nuevamente el domo en la base después de retirar la comida.

Instrucciones para el NuWave™ Pro Plus Infrared Oven

Panel de Control en la Fuente de Potencia

Debe aparecer "0" en el display LCD cuando el programa esté borrado.

Inicio Rápido

Para comenzar a cocinar, presione el botón COOK TIME, ingrese el tiempo deseado y presione Start. Automáticamente está programado a 350°F. Si va a cocinar a otra temperatura se necesitará utilizar el botón COOK TEMP.

Comience a Cocinar

Ajuste el tiempo y temperatura apropiados, luego presione Start para comenzar a cocinar. El tiempo de cocinar restante aparecerá en el panel display y el símbolo de dos puntos entre las horas y los minutos parpadeará. El horno parará de cocinar automáticamente cuando el tiempo se haya terminado y "sonará" para avisar sobre esta acción.

Pausa/Borrar

Para pausar el Horno, presione el botón Pause/Clear una vez. El tiempo restante permanecerá exhibido en el panel display pero los dos puntos no parpadearán. Para detener o borrar el tiempo de cocinar, presione el botón Pause/Clear dos veces. Las funciones se interrumpirán inmediatamente, el tiempo restante será borrado completamente y un "0" aparecerá.

Conversión °F/°C

La temperatura automática está en Fahrenheit (°F) pero el NuWave Oven Pro Plus puede mostrar Centígrados (°C) también.

1. Mantenga presionado Cook Temp por 3 segundos para activar el modo de conversión °F/°C. El Display LED mostrará "350" y aparecerá TEMP.
2. El display LED mostrará °F, sonará una vez y se iluminará TEMP por 5 segundos. Si no realiza alguna acción, el Horno automáticamente abandonará el modo de conversión °F/°C.
3. Una vez que se encuentre en el modo de conversión °F/°C, presione 0 para cambiar el display LED a °C, en ese momento el horno producirá un sonido largo.
4. Presione 0 una vez más para regresar a °F, si así lo desea.
5. Una vez que haya elegido el tipo de grados deseado, no presione ningún botón por 5 segundos o presione Clear para salir del modo de conversión °F/°C.
6. El nuevo ajuste de temperatura (°F o °C) será ahora el automático hasta que se cambie otra vez, aún cuando el Horno sea apagado.

Función de Tiempo

1. Presione el botón de Cook Time. El indicador de tiempo se iluminará en la esquina derecha del display LED.
2. Ingrese el tiempo en horas y minutos presionando los números correspondientes, luego presione Start. Por ejemplo, 1 hora y 30 minutos se ingresaría presionando 1,3 y 0, el panel display mostrará 1:30. Para 5 minutos sólo presione 5; para 46 minutos presione 4 y 6. Si necesita corregir el número, borre el que ingresó presionando el botón de Pause/Clear dos veces. Después ingrese nuevamente los números correctos y presione Start.
3. Usted podrá cambiar el tiempo en cualquier momento mientras cocina al presionar Cook Time. TIME se iluminará. Ingrese el tiempo deseado, el display LED mostrará el tiempo restante. TIME estará iluminado y aparecerán los dos puntos (:).

NOTA: Cuando se cocine a una temperatura entre 100°F y 324°F, el tiempo máximo podrá ser de 9 horas y 59 minutos. Cuando se cocine a una temperatura entre 325°F y 350°F, el tiempo máximo podrá ser de 2 horas. Si se ingresa un tiempo mayor a 2 horas cuando se cocine en este último rango de temperatura, el NuWave Oven Pro Plus regresará automáticamente a 2 horas.

Función de Temperatura

1. La temperatura automática es de 350°F (177°C).
2. Para cambiar la temperatura presione Cook Temp. El display LED mostrará 350°F (177°C) y aparecerá TEMP.
3. Seleccione la temperatura deseada. La temperatura puede ser ajustada por 1 grado dentro del rango del NuWave Oven Pro Plus. La temperatura mínima es de 100°F (38°C) y la máxima es de 350°F (177°C). TEMP seguirá mostrándose en el display LED.
4. Usted podrá cambiar la temperatura en cualquier momento mientras cocina al presionar Cook Temp. Los dos puntos (:) en el display LED desaparecerán, se iluminará TIME y aparecerá TEMP. La temperatura actual se mostrará por 3 segundos, durante ese tiempo, usted podrá ingresar una nueva temperatura a su elección.
5. Mientras esté cocinando sólo podrá utilizar los botones Cook Time, Cook Temp y Pause/Clear.
6. La temperatura no podrá ser cambiada una vez que presione Delay o Reheat.

Función de Demora

Después de ajustar la temperatura y el tiempo, usted puede demorar el programa antes de comenzar a cocinar. Cuando elija la función de Demora, ésta siempre será la primera. Esta función es sólo para el tiempo de cocinado y para posponer la hora de inicio. Cuando el botón Delay sea presionado, se iluminará Delay y parpadeará Time en el display LCD. Ingrese el tiempo de demora y presione Start. Delay dejará de parpadear y permanecerá encendido hasta que el tiempo concluya. Es posible demorar un programa hasta por 9 horas y 59 minutos. Cuando la cuenta regresiva llegue a 0, el horno sonará para avisar del fin.

Función de Recalentado

Automáticamente está programado a 350°F por 4 minutos. Esta función es perfecta para recalentar porciones individuales de alimentos. Para activar la función de recalentado, asegúrese de que la programación previa haya sido borrada. El Display LCD se leerá en 0. Presione el botón Reheat y se activará el programa automático. Presione Start. El Horno "sonará" 3 veces cuando haya terminado. Por ejemplo, si usted desea recalentar sobrantes de pizza, solamente coloque la rebanada en la rejilla de 3 pulgadas, presione Reheat y luego Start. Si desea calentar un plato de arroz o fideos, coloque una porción individual en un recipiente apto para horno (de vidrio, metal o silicón). Para que su arroz o fideos queden más suaves, rocíelos con un poco de agua y cúbralos con papel aluminio.

Función de Mantener Caliente

Después de que el tiempo inicial sea completado, usted podrá mantener su comida caliente. Cuando elija la función de Mantener Caliente, ésta será siempre la última. El ajuste automático está programado a 155°F por 2 horas. Cuando el botón Warm sea presionado, se iluminará Warm y parpadeará Time en el display LCD; se mostrará 2:00, luego presione Start. Para cambiar el tiempo, presione Cook Time, ingrese el tiempo deseado y prosiga. Usted podrá programar el horno para mantener su comida caliente hasta por 9 horas y 59 minutos. Una vez que el ciclo inicial de cocinado haya terminado, el horno sonará dos veces antes de cambiar a la función de Mantener Caliente.

INSTRUCCIONES DE CUIDADO Y LIMPIEZA

Desconecte la unidad antes de limpiarla. El Domo y todas las otras partes, excepto la Fuente de Potencia, son aptos para el lavavajillas. Proteja las superficies de metal y plástico no utilizando limpiadores cáusticos o fibras. Limpie después de cada uso. La superficie exterior de la Fuente de Potencia puede ser limpiada con un paño húmedo.

IMPORTANTE- No lave ni sumerja la Fuente de Potencia en agua ni utilice el lavavajillas. La superficie externa puede ser limpiada cuidadosamente con un paño húmedo o una esponja.

CONSEJOS IMPORTANTES:

1. Revise el contacto de electricidad para un buen funcionamiento. El NuWave Oven utiliza hasta 1500 vatios/12.5 amperios. No opere la unidad simultáneamente con otros electrodomésticos más grandes en el mismo contacto.
2. Revise la temperatura si la unidad cocina demasiado lento.
3. La clavija debe estar conectada correctamente en el contacto.
4. Siempre apague y desconecte el aparato antes de limpiarlo.
5. Se puede acumular vapor dentro del domo si no se retira pronto una vez que el tiempo de cocinar haya terminado. El vapor y empañamiento se pueden evitar sacando la comida pronto.

LIBRO DE COCINA COMPLETO DEL HORNO NUWAVE

Consejos Generales

Este libro de recetas contiene información valiosa que te ayudará a empezar a incorporar el Horno Infrarrojo de NuWave Pro Plus en tu vida diaria. Hemos provisto recetas fáciles de preparar, junto con consejos útiles en el comienzo de cada sección que te ayudarán a lograr los resultados perfectos de cocción en todo momento. También visitar [NuWaveCookingClub.com](#) para otros excelentes consejos y videos instructivos.

Los contenedores metálicos, papel de aluminio o cualquier plato apto para el horno pueden ser usados en el Horno Infrarrojo NuWave Pro Plus. Los rayos infrarrojos no penetrarán a través de estos materiales. El papel de aluminio de peso liviano trabaja mejor para proteger platos poco profundos y ollas. Cubrir la comida con papel de aluminio para proteger del oscurecimiento más que preferido. Tener en cuenta que el calor circulará de todas maneras, pero el aluminio hará que el tiempo de cocción de la comida abajo sea más lento.

Puede generarse la acumulación de vapor al cocinar comida que contenga mucha humedad, como verduras o pescado.

Cuando tu ciclo de cocción está completo, por favor acordarse de levantar la cúpula para que el vapor se canalice mejor de tu cara.

Para mantener crujiente la comida preparada, tales como rollos de huevo, pollo o pizza, remover la cúpula inmediatamente después de la cocción.

El tiempo es la clave para la perfección con el Horno NuWave. Tener en cuenta que todas las pautas son solamente pautas, y puede ser necesario ajustarlas dependiendo de la situación específica. Al cocinar platos más grandes tales como asado u otros tipos de comida con grosor variante, los tiempos sugeridos de cocción pueden necesitar ser extendidos. Cocinar con incrementos de 3-4 minutos y revisar después de cada intervalo.
