PORCELAIN

Cleaning & Care

THE GENERAL CARE AND CLEANING OF ANY PORCELAIN VESSEL SINK

For general maintenance, all porcelain sinks can be regularly cleaned with a mild detergent, warm water and a soft cloth. Wipe down and dry the sink after each use to protect against hard water, which can create blemishes that are tough to eliminate. For a thorough cleaning after extended use, or to remove stubborn stains, follow the instructions on the reverse side.

Cleaning & Care

CLEANING INSTRUCTIONS

SHINE

Life can be brought back to a porcelain sink finish by pouring some vinegar straight from the bottle into the sink bowl. Using a nylon brush, scrub the surface with the vinegar, rinse thoroughly, and enjoy the revitalized like-new finish.

SANITIZATION

For a thorough cleaning of a porcelain sink, a mild chlorine-bleach cleaner such as Soft Scrub® can be used. Rinse immediately after use and dry. Be sure to follow the manufacturer's instructions.

Another option is to let the sink soak in a bleach solution (approximately one part bleach/three parts water) for thirty minutes to an hour; then drain, rinse well, and dry. We recommend Clorox® bleach.

SCUFFING

For superficial scuff marks (gray lines in the surface), gently apply a paste of baking soda and water with a sponge or soft cloth. Rinse thoroughly and dry. A polishing cleanser will also

remove stains without scratching. Be sure to follow manufacturer's instructions.

DAMAGES

Porcelain is very durable, but dropping heavy objects on it can chip the surface. Even the smallest chip will leave the area rough and susceptible to stains and germs. Be sure to keep the location clean and dry. For repairs consult your local plumber.
