CHAMBERLAIN®

—— Smart Garage Opener ——

- Please read this manual and the enclosed safety materials carefully!
- Fasten the manual near the garage door after installation.
- The door WILL NOT CLOSE unless the Protector System* is connected and properly aligned.
- Periodic checks of the garage door opener are required to ensure safe operation.
- The model number label is located on the front panel of your garage door opener.
- This garage door opener is compatible with MyQ® and Security+ 2.0® accessories.
- DO NOT install on a one-piece door if using devices or features providing unattended close. Unattended devices and features are to be used ONLY with sectional doors.

Safety Symbol and Signal Word Review

This garage door opener has been designed and tested to offer safe service provided it is installed, operated, maintained and tested in strict accordance with the instructions and warnings contained in this manual.

A WARNING

Mechanical

WARNING

Electrical

When you see these Safety Symbols and Signal Words on the following pages, they will alert you to the possibility of *serious injury or death* if you do not comply with the warnings that accompany them. The hazard may come from something mechanical or from electric shock. Read the warnings carefully.

When you see this Signal Word on the following pages, it will alert you to the possibility of damage to your garage door and/or the garage door opener if you do not comply with the cautionary statements that accompany it. Read them carefully.

CAUTION

WARNING: This product can expose you to chemicals including lead, which are known to the State of California to cause cancer or birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

Unattended Operation

The Timer-to-Close (TTC) feature, the MyQ® Smartphone Control app, and MyQ® Garage Door and Gate Monitor are examples of unattended close and are to be used ONLY with sectional doors. Any device or feature that allows the door to close without being in the line of sight of the door is considered unattended close. The Timer-to-Close (TTC) feature, the MyQ® Smartphone Control, and any other MyQ® devices are to be used ONLY with sectional doors.

Check the Door

A WARNING

To prevent possible SERIOUS INJURY or DEATH:

- ALWAYS call a trained door systems technician if garage door binds, sticks, or is out of balance.
 An unbalanced garage door may NOT reverse when required.
- NEVER try to loosen, move or adjust garage door, door springs, cables, pulleys, brackets or their hardware, ALL of which are under EXTREME tension.
- Disable ALL locks and remove ALL ropes connected to garage door BEFORE installation and operating garage door opener to avoid entanglement.
- DO NOT install on a one-piece door if using devices or features providing unattended close.
 Unattended devices and features are to be used ONLY with sectional doors.

CAUTION

To prevent damage to garage door and opener:

- ALWAYS disable locks BEFORE installing and operating the opener.
- ONLY operate garage door opener at 120V, 60 Hz to avoid malfunction and damage.

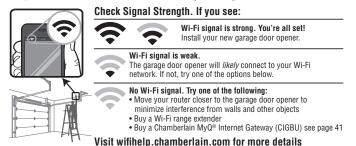

Before you begin:

- 1. Disable locks and remove any ropes connected to the garage door.
- Lift the door halfway up. Release the door. If balanced, it should stay in place, supported entirely by its springs.
- Raise and lower the door to check for binding or sticking. If your door binds, sticks, or is out of balance, call a trained door systems technician.
- Check the seal on the bottom of the door. Any gap between the floor and the bottom of the door must not exceed 1/4 inch (6 mm).
 Otherwise, the safety reversal system may not work properly.
- The opener should be installed above the center of the door. If there is a torsion spring or center bearing plate in the way of the header bracket, it may be installed within 4 feet (1.2 m) to the left or right of the door center. See page 12.

Test the Wi-Fi® Signal Strength in your garage

You will need a router with Wi-Fi and a smartphone or other mobile device. Make sure your mobile device is connected to your Wi-Fi network. Hold your mobile device in the place where your garage door opener will be installed and check the Wi-Fi signal strength.

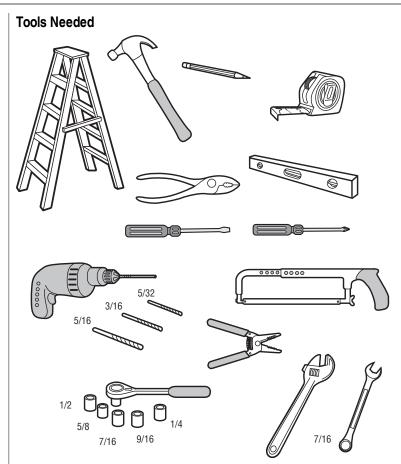

See MyQ® Smartphone Control page 32 to connect your garage door opener to your Wi-Fi network.

Additional Items You May Need:

Survey your garage area to see if you will need any of the following items:

- (2) 2X4 Pieces of wood: May be used to fasten the header bracket to the structural supports.
 Also used to position the garage door opener during installation and for testing the safety reversing sensors.
- Support bracket and fastening hardware: Must be used if you have a finished ceiling in your garage.
- Extension brackets (MODEL 041A5281-1) or wood blocks: Depending upon garage construction, extension brackets or wood blocks may be needed to install the safety reversing sensor.
- Fastening hardware: Alternate floor mounting of the safety reversing sensor will require hardware not provided.
- Door reinforcement: Required if you have a lightweight steel, aluminum, fiberglass or glass panel door.
- Rail extension kit: Required if your garage door is more than 7 feet (2.13 m) high.

Carton Inventory

Save the carton and packing material until the installation and adjustment is complete. Instructions for the accessories will be attached to the accessory and are not included in this manual. The images throughout this manual are for reference only and your product may look different.

DOOR CONTROL -

Drywall Anchors (2)

Screw 6-32x1" (2)

Screw 6ABx1" (2)

Insulated Staples (Not Shown)

STEP 1 Assemble the rail and install the trolley

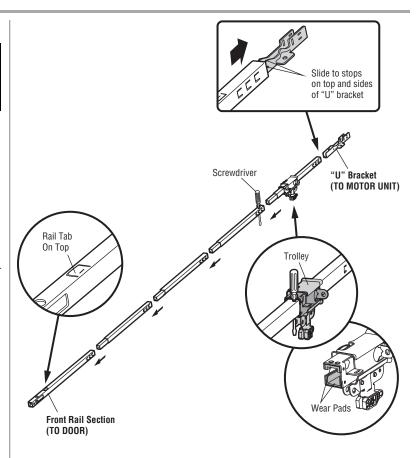

CAUTION

To prevent INJURY from pinching, keep hands and fingers away from the joints while assembling the rail.

To avoid installation difficulties, do not run the garage door opener until instructed to do so.

The front rail has a cut out "window" at the door end. The rail tab MUST be on top of the rail when assembled.

- Remove the straight door arm and hanging bracket packaged inside the front rail and set aside for Installation Step 5 and 9. NOTE: To prevent INJURY while unpacking the rail carefully remove the straight door arm stored within the rail section.
- Align the rail sections on a flat surface as shown and slide the tapered ends into the larger ones. Tabs along the side will lock into place.
- 3. Place the motor unit on packing material to protect the cover, and rest the back end of the rail on top. For convenience, put a support under the front end of the rail.
- As a temporary stop, insert a screwdriver into the hole in the second rail section from the motor unit as shown.
- 5. Check to be sure there are 4 plastic wear pads inside the inner trolley. If they became loose during shipping, check all packing material. Snap them back into position as shown.
- 6. Slide the trolley assembly toward the screwdriver as shown.
- Slide the rail onto the "U" bracket, until it reaches all the stops on the top and sides of the "U" bracket.

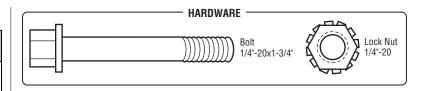

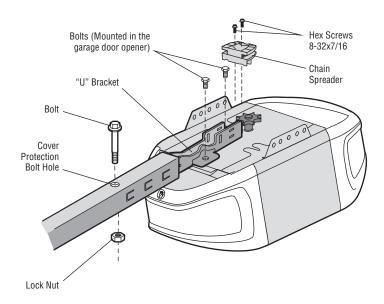

STEP 2 Fasten the rail to the motor unit

CAUTION

To avoid SERIOUS damage to garage door opener, use ONLY those bolts/fasteners mounted in the top of the opener.

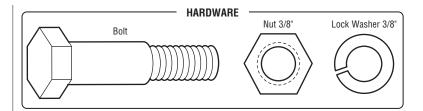

- Insert a 1/4"-20 x 1-3/4" bolt into the cover protection bolt hole on the back end of the rail as shown. Tighten securely with a 1/4"-20 lock nut. DO NOT overtighten.
- 2. Remove the bolts from the top of the motor unit.
- 3. Use the carton to support the front end of the rail.
- 4. Place the "U" bracket, flat side down onto the motor unit and align the bracket holes with the bolt holes.
- 5. Fasten the "U" bracket with the previously removed bolts; DO NOT use any power tools. The use of power tools may permanently damage the garage door opener.
- 6. Attach chain spreader to the motor unit with two screws.

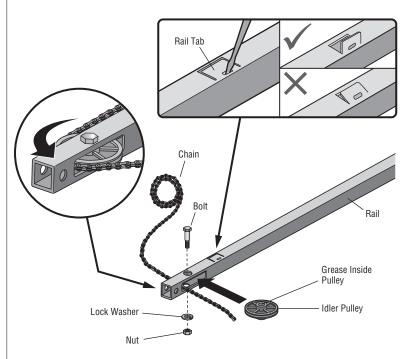

STEP 3 Install the idler pulley

- Lay the chain beside the rail, as shown. Grasp the end of the chain and pass approximately 12" (30 cm) of chain through the window. Allow it to hang until Assembly Step 4.
- Remove the tape from the idler pulley. The inside center should be pre-greased. If dry, regrease to ensure proper operation.
- 3. Place the idler pulley into the window as shown.
- Insert the idler bolt from the top through the rail and pulley. Tighten with a 3/8" lock washer and nut underneath the rail until the lock washer is compressed.
- 5. Rotate the pulley to be sure it spins freely.
- Locate the rail tab. The rail tab is near the idler pulley on the front rail section. Use a flat head screwdriver and lift the rail tab until the tab is vertical (90°).

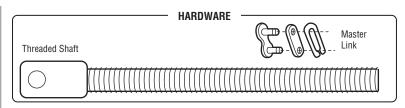

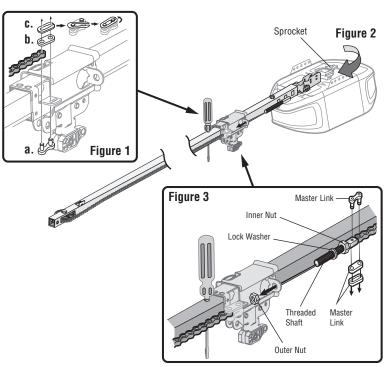

STEP 4 Install the chain

A WARNING

To avoid possible SERIOUS INJURY to finger from moving garage door opener:

- ALWAYS keep hand clear of sprocket while operating opener.
- Securely attach sprocket cover BEFORE operating.
 - 1. Pull the chain around the idler pulley and toward the trolley.
 - 2. Connect the chain to the retaining slot on the trolley, as shown. (Figure 1)
 - a. Push pins of master link bar through chain link and trolley slot.
 - b. Push master link cap over pins and past pin notches.
 - Slide the closed end of the clip-on spring over one of the pins. Push the open end of the clip-on spring onto the other pin.
- With the trolley against the screwdriver, dispense the remainder of the chain along the rail toward the motor unit around the sprocket and continuing to the trolley assembly. The sprocket teeth must engage the chain. (Figure 2)
- Check to make sure the chain is not twisted, then connect it to the threaded shaft with the remaining master link.
- 5. Thread the inner nut and lock washer onto the trolley threaded shaft.
- Insert the trolley threaded shaft through the hole in the trolley. Be sure the chain is not twisted. (Figure 3)
- 7. Loosely thread the outer nut onto the trolley threaded shaft.
- Remove the screwdriver.

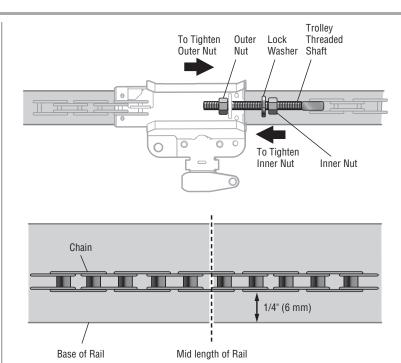

STEP 5 Tighten the chain

- 1. Spin the inner nut and lock washer down the trolley threaded shaft, away from the trolley.
- 2. To tighten the chain, turn the outer nut in the direction shown.
- When the chain is approximately 1/4" (6 mm) above the base of the rail at it's midpoint, retighten the inner nut to secure the adjustment.

Sprocket noise can result if the chain is too loose. When installation is complete, you may notice some chain droop with the door closed. This is normal. If the chain returns to the position shown when the door is open, do not re-adjust the chain.

NOTE: During future maintenance, ALWAYS pull the emergency release handle to disconnect the trolley before adjusting the chain.

You have now finished assembling your garage door opener. Please read the following warnings before proceeding to the installation section.

IMPORTANT INSTALLATION INSTRUCTIONS

A WARNING

To reduce the risk of SEVERE INJURY or DEATH:

- 1. READ AND FOLLOW ALL INSTALLATION WARNINGS AND INSTRUCTIONS.
- Install garage door opener ONLY on properly balanced and lubricated garage door. An improperly balanced door may NOT reverse when required and could result in SEVERE INJURY or DEATH.
- ALL repairs to cables, spring assemblies and other hardware MUST be made by a trained door systems technician BEFORE installing opener.
- Disable ALL locks and remove ALL ropes connected to garage door BEFORE installing opener to avoid entanglement.
- 5. Install garage door opener 7 feet (2.13 m) or more above floor.
- Mount the emergency release within reach, but at least 6 feet (1.83 m) above the floor and avoiding contact with vehicles to avoid accidental release.
- 7. NEVER connect garage door opener to power source until instructed to do so.
- 8. NEVER wear watches, rings or loose clothing while installing or servicing opener. They could be caught in garage door or opener mechanisms.

- 9. Install wall-mounted garage door control:
 - · within sight of the garage door.
 - out of reach of small children at a minimum height of 5 feet (1.5 m) above floors, landings, steps or any other adjacent walking surface.
 - away from ALL moving parts of the door.
- 10. Place entrapment warning label on wall next to garage door control.
- 11. Place manual release/safety reverse test label in plain view on inside of garage door.
- Upon completion of installation, test safety reversal system. Door MUST reverse on contact with a 1-1/2" (3.8 cm) high object (or a 2x4 laid flat) on the floor.
- To avoid SERIOUS PERSONAL INJURY or DEATH from electrocution, disconnect ALL electric power BEFORE performing ANY service or maintenance.
- DO NOT install on a one-piece door if using devices or features providing unattended close.
 Unattended devices and features are to be used ONLY with sectional doors.

STEP 1 Determine the header bracket location

WARNING

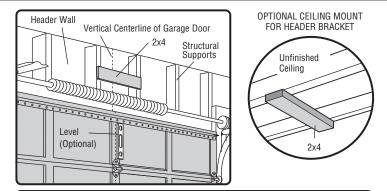

To prevent possible SERIOUS INJURY or DEATH:

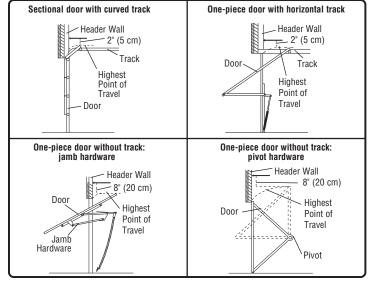

- Header bracket MUST be RIGIDLY fastened to structural support on header wall or ceiling, otherwise garage door might NOT reverse when required. DO NOT install header bracket over drywall.
- Concrete anchors MUST be used if mounting header bracket or 2x4 into masonry.
- NEVER try to loosen, move or adjust garage door, springs, cables, pulleys, brackets, or their hardware, ALL of which are under EXTREME tension.
- ALWAYS call a trained door systems technician if garage door binds, sticks, or is out of balance.
 An unbalanced garage door might NOT reverse when required.

Installation procedures vary according to garage door types. Follow the instructions which apply to your door.

- 1. Close the door and mark the inside vertical centerline of the garage door.
- 2. Extend the line onto the header wall above the door. You can fasten the header bracket within 4 feet (1.22 m) of the left or right of the door center only if a torsion spring or center bearing plate is in the way; or you can attach it to the ceiling (see page 13) when clearance is minimal. (It may be mounted on the wall upside down if necessary, to gain approximately 1/2" (1 cm). If you need to install the header bracket on a 2x4 (on wall or ceiling), use lag screws (not provided) to securely fasten the 2x4 to structural supports as shown here and on page 13.
- Open your door to the highest point of travel as shown. Draw an intersecting horizontal line on the header wall 2" (5 cm) above the high point:
- 2" (5 cm) above the high point for sectional door and one-piece door with track.
- 8" (20 cm) above the high point for one-piece door without track.

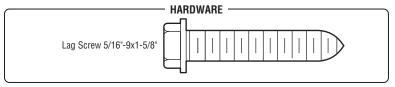

This height will provide travel clearance for the top edge of the door. **NOTE:** If the total number of inches exceeds the height available in your garage, use the maximum height possible, or refer to page 13 for ceiling installation.

STEP 2 Install the header bracket

You can attach the header bracket either to the wall above the garage door, or to the ceiling. Follow the instructions which will work best for your particular requirements. **Do not install the header bracket over drywall.** If installing into masonry, use concrete anchors (not provided).

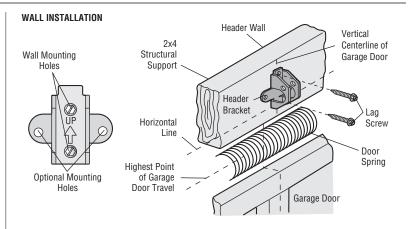

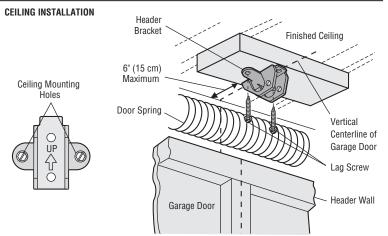

OPTION A WALL INSTALLATION

- Center the bracket on the vertical centerline with the bottom edge of the bracket on the horizontal line as shown (with the arrow pointing toward the ceiling).
- Mark the vertical set of bracket holes. Drill 3/16" pilot holes and fasten the bracket securely to a structural support with the hardware provided.

OPTION B CEILING INSTALLATION

- 1. Extend the vertical centerline onto the ceiling as shown.
- Center the bracket on the vertical mark, no more than 6" (15 cm) from the wall. Make sure the
 arrow is pointing away from the wall. The bracket can be mounted flush against the ceiling
 when clearance is minimal.
- Mark the side holes. Drill 3/16" pilot holes and fasten bracket securely to a structural support with the hardware provided.

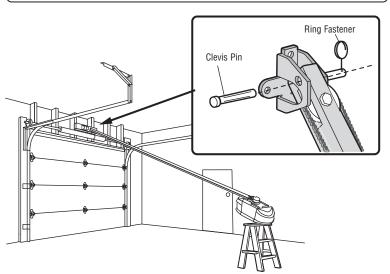

STEP 3 Attach the rail to the header bracket

Position the opener on the garage floor below the header bracket. Use packing material as a
protective base.

NOTE: If the door spring is in the way, you will need help. Have someone hold the opener securely on a temporary support to allow the rail to clear the spring.

- Position the rail bracket against the header bracket.
- 3. Align the bracket holes and join with a clevis pin as shown.
- 4. Insert a ring fastener to secure.

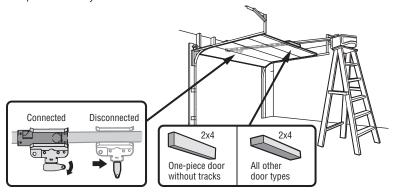

STEP 4 Position the garage door opener

CAUTION

To prevent damage to garage door, rest garage door opener rail on 2x4 placed on top section of door.

- 1. Remove the packing material and lift the garage door opener onto a ladder.
- Fully open the door and place a 2x4 (laid flat) under the rail. For one-piece doors without tracks, lay the 2x4 on it's side.

NOTE: A 2x4 is ideal for setting the distance between the rail and the door. If the ladder is not tall enough you will need help at this point. If the door hits the trolley when it is raised, pull the trolley release arm down to disconnect the inner and outer trolley. Slide the outer trolley toward the garage door opener. The trolley can remain disconnected until instructed.

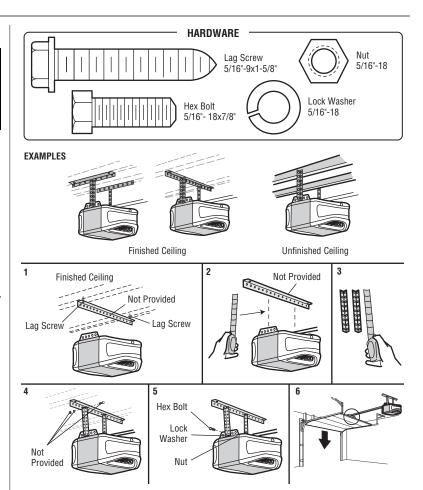

STEP 5 Hang the garage door opener

WARNING

To avoid possible SERIOUS INJURY from a falling garage door opener, fasten it SECURELY to structural supports of the garage. Concrete anchors MUST be used if installing ANY brackets into masonry.

Hanging the garage door opener will vary depending on your garage. Below are three example installations. Your installation may be different. For ALL installations the garage door opener MUST be connected to structural supports. The instructions illustrate one of the examples below.

- On finished ceilings, use the lag screws to attach a support bracket (not provided) to the structural supports before installing the garage door opener.
- Make sure the garage door opener is aligned with the header bracket. Measure the distance from each side of the garage door opener to the support bracket.
- 3. Cut both pieces of the hanging bracket to required lengths.
- Attach the end of each hanging bracket to the support bracket with appropriate hardware (not provided).
- Attach the garage door opener to the hanging brackets with the hex bolts, lock washers, and nuts.
- 6. Remove the 2x4 and manually close the door. If the door hits the rail, raise the header bracket.

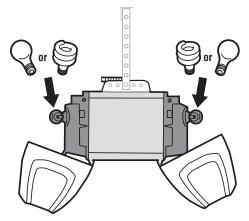

STEP 6 Install the light bulbs

CAUTION

To prevent possible OVERHEATING of the end panel or light socket:

- Use ONLY A19 incandescent (100W maximum) or compact fluorescent (26W maximum) light bulbs.
- DO NOT use incandescent bulbs larger than 100W.
- DO NOT use compact fluorescent light bulbs larger than 26W (100W equivalent).
- DO NOT use halogen bulbs.
- DO NOT use short neck or specialty light bulbs.
- 1. Pull on the top sides of the light lens and rotate the light lens down.
- Insert an A19 incandescent (100W maximum) or compact fluorescent (26W, 100W equivalent) light bulb into the light socket.
- 3. Rotate the lens up to close.

NOTE: Do not use halogen, short neck, or specialty light bulbs as these may overheat the end panel or light socket. Do not use LED bulbs as they may reduce the range or performance of your remote controls.

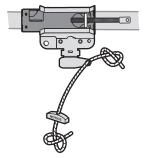

STEP 7 Attach the emergency release rope and handle

A WARNING

To prevent possible SERIOUS INJURY or DEATH from a falling garage door:

- If possible, use emergency release handle to disengage trolley ONLY when garage door is CLOSED. Weak or broken springs or unbalanced door could result in an open door falling rapidly and/or unexpectedly.
- NEVER use emergency release handle unless garage doorway is clear of persons and obstructions.
- NEVER use handle to pull door open or closed. If rope knot becomes untied, you could fall.
- Insert one end of the emergency release rope through the handle. Make sure that "NOTICE" is right side up. Secure with an overhand knot at least 1" (2.5 cm) from the end of the rope to prevent slipping.
- Insert the other end of the emergency release rope through the hole in the trolley release arm. Mount the emergency release within reach, but at least 6 feet (1.83 m) above floor, avoiding contact with vehicles to prevent accidental release and secure with an overhand knot.

NOTE: If it is necessary to cut the emergency release rope, seal the cut end with a match or lighter to prevent unraveling. Ensure the emergency release rope and handle are above the top of all vehicles to avoid entanglement.

STEP 8 Install the door bracket

CAUTION

Fiberglass, aluminum or lightweight steel garage doors **WILL REQUIRE** reinforcement BEFORE installation of door bracket. Contact the garage door manufacturer or installing dealer for opener reinforcement instructions or reinforcement kit. Failure to reinforce the top section as required according to the door manufacturer may void the door warranty.

A horizontal and vertical reinforcement is needed for lightweight garage doors (fiberglass, aluminum, steel, doors with glass panel, etc.) (not provided). A horizontal reinforcement brace should be long enough to be secured to two or three vertical supports. A vertical reinforcement brace should cover the height of the top panel. Contact the garage door manufacturer or installing dealer for opener reinforcement instructions or reinforcement kit.

NOTE: Many door reinforcement kits provide for direct attachment of the clevis pin and door arm. In this case you will not need the door bracket; proceed to the next step.

OPTION A SECTIONAL DOORS

- Center the door bracket on the previously marked vertical centerline used for the header bracket installation. Note correct UP placement, as stamped inside the bracket.
- Position the top edge of the bracket 2"-4" (5-10 cm) below the top edge of the door, OR directly below any structural support across the top of the door.
- 3. Mark, drill holes and install as follows, depending on your door's construction.

Metal or light weight doors using a vertical angle iron brace between the door panel support and the door bracket:

- Drill 3/16" fastening holes. Secure the door bracket using the two 1/4"-14x5/8" self-threading screws. (Figure 1)
- Alternately, use two 5/16"-18x2" bolts, lock washers and nuts (not provided). (Figure 2)

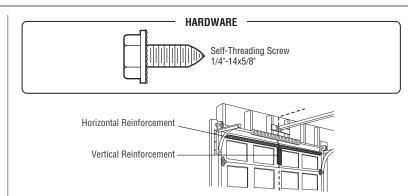

Metal, insulated or light weight factory reinforced doors:

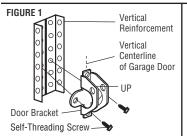

Drill 3/16" fastening holes. Secure the door bracket using the self-threading screws. (Figure 3)

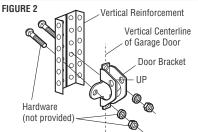

Wood doors:

 Use top and bottom or side to side door bracket holes. Drill 5/16" holes through the door and secure bracket with 5/16"-18x2" carriage bolts, lock washers and nuts (not provided).
 (Figure 4)

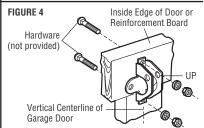

NOTE: The 1/4"-14x5/8" self-threading screws are not intended for use on wood doors.

STEP 8 Install the door bracket (continued)

OPTION B ONE-PIECE DOORS

- 1. Center the door bracket on the top of the door, in line with the header bracket as shown.
- 2. Mark either the left and right, or the top and bottom holes.

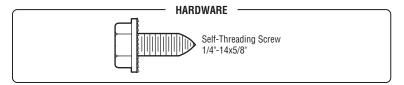

Metal Doors:

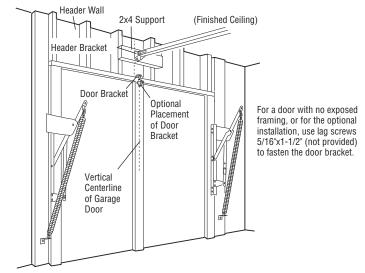

• Drill 3/16" pilot holes and fasten the bracket with the self-threading screws provided.

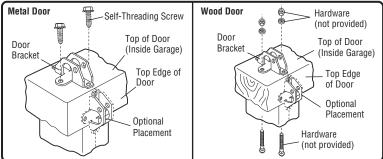

Wood Doors:

 Drill 5/16" holes and use 5/16"-18x2" carriage bolts, lock washers and nuts (not provided) or 5/16"x1-1/2" lag screws (not provided) depending on your installation needs.

NOTE: The door bracket may be installed on the top edge of the door if required for your installation. (Refer to the dotted line optional placement drawing.)

STEP 9 Connect the door arm to the trolley

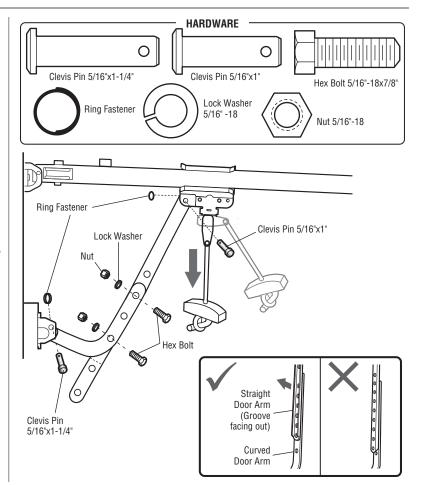

Installation will vary according to the garage door type. Follow the instructions which apply to your door.

OPTION A SECTIONAL DOORS

IMPORTANT: The groove on the straight door arm MUST face away from the curved door arm.

- 1. Close the door. Disconnect the trolley by pulling the emergency release handle.
- Attach the straight door arm to the outer trolley using the clevis pin. Secure with the ring fastener.
- Attach the curved door arm to the door bracket using the clevis pin. Secure with the ring fastener.
- Bring arm sections together. Find two pairs of holes that line up and join sections. Select holes
 as far apart as possible to increase door arm rigidity and attach using the bolts, nuts, and lock
 washers.
- Pull the emergency release handle toward the garage door opener until the trolley release arm is horizontal. The trolley will re-engage automatically when the garage door opener is activated.

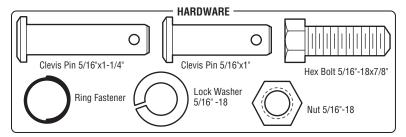

NOTE: If the holes in the curved door arm and the straight door arm do not align, reverse the straight door arm, select two holes (as far apart as possible) and attach using bolts, nuts, and lock washers. If the straight door arm is hanging down too far, you may cut 6 inches (15 cm) from the solid end.

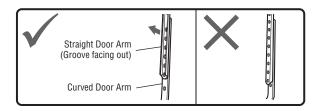

STEP 9 Connect the door arm to the trolley (continued) OPTION B ONE-PIECE DOORS

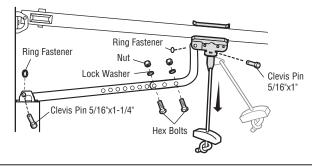

IMPORTANT: The groove on the straight door arm MUST face away from the curved door arm.

- 1. Close the door. Disconnect the trolley by pulling the emergency release handle.
- 2. Fasten the straight door arm and the curved door arm together to the longest possible length (with a 2 or 3 hole overlap) using the bolts, nuts, and lock washers.
- Attach the straight door arm to the door bracket using the clevis pin. Secure with the ring fastener.
- 4. Attach the curved door arm to the trolley using the clevis pin. Secure with the ring fastener.
- Pull the emergency release handle toward the garage door opener until the trolley release arm is horizontal.

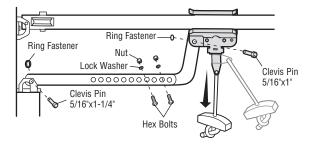

One-Piece Door without Track

One-Piece Door with Track

STEP 10 Install the door control

A WARNING

To prevent possible SERIOUS INJURY or DEATH from electrocution:

- Be sure power is NOT connected BEFORE installing door control.
- Connect door control ONLY to 12 VOLT low voltage wires.

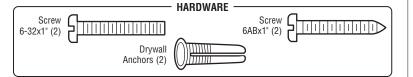

To prevent possible SERIOUS INJURY or DEATH from a closing garage door:

- Install door control within sight of garage door, out of reach of small children at a minimum height of 5 feet (1.5 m) above floors, landings, steps or any other adjacent walking surface, and away from ALL moving parts of door.
- NEVER permit children to operate or play with door control push buttons or remote control transmitters.
- Activate door ONLY when it can be seen clearly, is properly adjusted, and there are no
 obstructions to door travel.
- ALWAYS keep garage door in sight until completely closed. NEVER permit anyone to cross path of closing garage door.

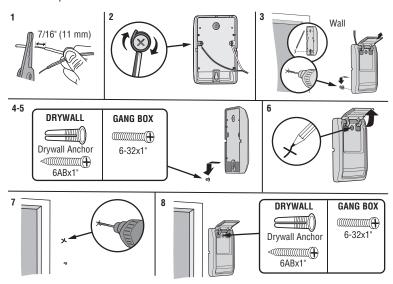

INTRODUCTION

Older Chamberlain door controls and third party products are not compatible. Install the door control within sight of the door at a minimum height of 5 feet (1.5 m) above floors, landings, steps or any other adjacent walking surface, where small children cannot reach, and away from the moving parts of the door. For gang box installations it is not necessary to drill holes or install the drywall anchors. Use the existing holes in the gang box.

NOTE: Your product may look different than the illustrations.

- 1. Strip 7/16 inch (11 mm) of insulation from one end of the wire and separate the wires.
- Connect one wire to each of the two screws on the back of the door control. The wires can be connected to either screw. If your garage is pre-wired for the door control choose any two wires to connect, note which wires are used so the correct wires are connected to the garage door opener in a later step.
- 3. Mark the location of the bottom mounting hole and drill a 5/32 inch hole.
- 4. Install the bottom screw, allowing 1/8 inch (3 mm) to protrude from the wall.
- 5. Position the bottom hole of the door control over the screw and slide down into place.
- 6. Lift the push bar up and mark the top hole.
- 7. Remove the door control from the wall and drill a 5/32 inch hole for the top screw.
- Position the bottom hole of the door control over the screw and slide down into place. Attach the top screw.

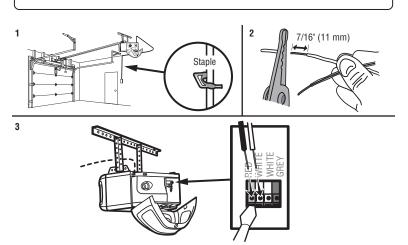

STEP 11 Wire the door control to the garage door opener

- Run the white and red/white wire from the door control to the garage door opener. Attach the
 wire to the wall and ceiling with the staple (not applicable for gang box or pre-wired
 installations). Do not pierce the wire with the staple as this may cause a short or an open
 circuit.
- 2. Strip 7/16 inch (11 mm) of insulation from the end of the wire near the garage door opener.
- Connect the wire to the red and white terminals on the garage door opener. If your garage is pre-wired make sure you use the same wires that are connected to the door control. To insert or release wires from the terminal, push in the tab with screwdriver tip.

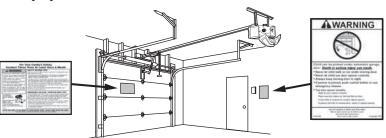

HARDWARE

Insulated Staple (Not Shown)

STEP 12 Attach the warning labels

- 1. Attach the entrapment warning label on the wall near the door control with tacks or staples.
- Attach the manual release/safety reverse test label in a visible location on the inside of the garage door.

STEP 13 Install the Protector System®

A WARNING

Be sure power is NOT connected to the garage door opener BEFORE installing the safety reversing sensor.

To prevent SERIOUS INJURY or DEATH from closing garage door:

- Correctly connect and align the safety reversing sensor. This required safety device MUST NOT be disabled.
- Install the safety reversing sensor so beam is NO HIGHER than 6" (15 cm) above garage floor.

IMPORTANT INFORMATION ABOUT THE SAFETY REVERSING SENSORS

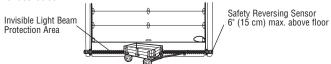

The safety reversing sensors must be connected and aligned correctly before the garage door opener will move in the down direction.

The sending sensor (with an amber LED) transmits an invisible light beam to the receiving sensor (with a green LED). If an obstruction breaks the light beam while the door is closing, the door will stop and reverse to the full open position, and the garage door opener lights will flash 10 times.

NOTE: For energy efficiency the garage door opener will enter sleep mode when the door is fully closed. The sleep mode shuts the garage door opener down until activated. The sleep mode is sequenced with the garage door opener light bulb; as the light bulb turns off the sensor LEDs will turn off and whenever the garage door opener lights turn on the sensor LEDs will light. The garage door opener will not go into the sleep mode until the garage door opener has completed 5 cycles upon power up.

When installing the safety reversing sensors check the following:

- Sensors are installed inside the garage, one on either side of the door.
- Sensors are facing each other with the lenses aligned and the receiving sensor lens does not receive direct sunlight.
- Sensors are no more than 6 inches (15 cm) above the floor and the light beam is unobstructed.

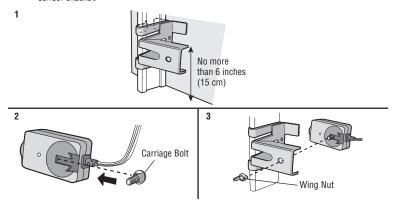

Facing the door from inside the garage

The safety reversing sensors can be attached to the door track, the wall, or the floor. The sensors should be no more than 6 inches (15 cm) above the floor. If the door track will not support the sensor bracket a wall installation is recommended. Choose one of the following installations.

OPTION A DOOR TRACK INSTALLATION

- Slide the curved arms of the sensor bracket around the edge of the door track. Snap into place so that the sensor bracket is flush against the track.
- 2. Slide the carriage bolt into the slot on each sensor.
- Insert the bolt through the hole in the sensor bracket and attach with the wing nut. The lenses on both sensors should point toward each other. Make sure the lens is not obstructed by the sensor bracket.

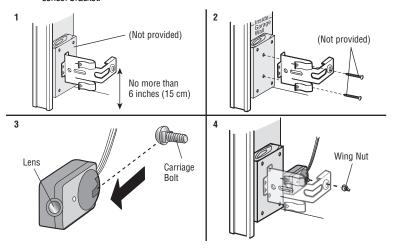

STEP 13 Install the Protector System® (continued)

OPTION B WALL INSTALLATION

If additional clearance is needed an extension bracket (not provided) or wood blocks can be used. Make sure each bracket has the same amount of clearance so they will align correctly.

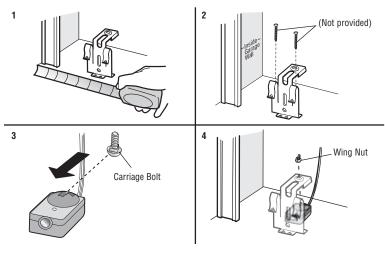

- Position the sensor bracket against the wall with the curved arms facing the door. Make sure there is enough clearance for the beam to be unobstructed. Mark holes.
- Drill 3/16 inch pilot holes for each sensor bracket and attach the sensor brackets to the wall using lag screws (not provided).
- 3. Slide the carriage bolt into the slot on each sensor.
- Insert the bolt through the hole in the sensor bracket and attach with the wing nut. The lenses
 on both sensors should point toward each other. Make sure the lens is not obstructed by the
 sensor bracket.

OPTION C FLOOR INSTALLATION

Use an extension bracket (not provided) or wood block to raise the sensor bracket if needed.

- Carefully measure the position of both sensor brackets so they will be the same distance from the wall and unobstructed.
- 2. Attach the sensor brackets to the floor using concrete anchors (not provided).
- 3. Slide the carriage bolt into the slot on each sensor.
- Insert the bolt through the hole in the sensor bracket and attach with the wing nut. The lenses
 on both sensors should point toward each other. Make sure the lens is not obstructed by the
 sensor bracket.

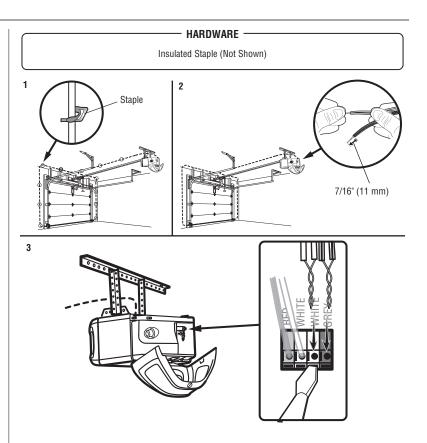

STEP 14 Wire the Safety Reversing Sensors

If your garage already has wires installed for the safety reversing sensors, proceed to page 26.

OPTION A INSTALLATION WITHOUT PRE-WIRING

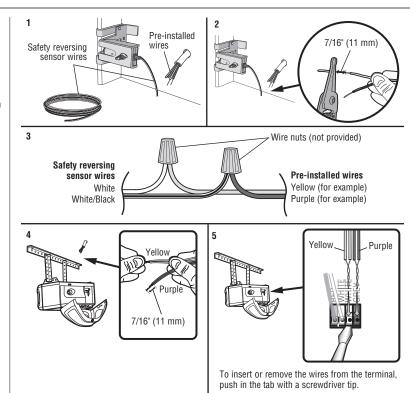

- Run the wire from both sensors to the garage door opener. Attach the wire to the wall and ceiling with the staples.
- Strip 7/16 inch (11 mm) of insulation from each set of wires. Separate the wires. Twist the white wires together. Twist the white/black wires together.
- Insert the white wires into the white terminal on the garage door opener. Insert the white/black wires into the grey terminal on the garage door opener. To insert or remove the wires from the terminal, push in the tab with a screwdriver tip.

STEP 14 Wire the Safety Reversing Sensors (continued)

OPTION B PRE-WIRED INSTALLATION

- Cut the end of the safety reversing sensor wire, making sure there is enough wire to reach the
 pre-installed wires from the wall.
- Separate the safety reversing sensor wires and strip 7/16 inch (11 mm) of insulation from each end. Choose two of the pre-installed wires and strip 7/16 inch (11 mm) of insulation from each end. Make sure that you choose the same color pre-installed wires for each sensor.
- Connect the pre-installed wires to the sensor wires with wire nuts making sure the colors correspond for each sensor. For example, the white wire would connect to the yellow wire and the white/black wire would connect to the purple wire.
- At the garage door opener, strip 7/16 inch (11 mm) of insulation from each end of the wires
 previously chosen for the safety reversing sensors. Twist the like-colored wires together.
- Insert the wires connected to the white safety sensor wires to the white terminal on the garage door opener. Insert the wires that are connected to the white/black safety sensor wires to the grey terminal on the garage door opener.

STEP 15 Connect power

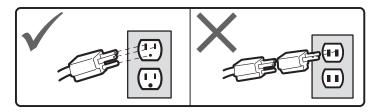

WARNING

To prevent possible SERIOUS INJURY or DEATH from electrocution or fire:

- Be sure power is NOT connected to the opener, and disconnect power to circuit BEFORE removing cover to establish permanent wiring connection.
- Garage door installation and wiring MUST be in compliance with ALL local electrical and building codes.
- NEVER use an extension cord, 2-wire adapter, or change plug in ANY way to make it fit outlet.
 Be sure the opener is grounded.

To avoid installation difficulties, do not run the opener at this time.

To reduce the risk of electric shock, your garage door opener has a grounding type plug with a third grounding pin. This plug will only fit into a grounding type outlet. If the plug doesn't fit into the outlet you have, contact a qualified electrician to install the proper outlet.

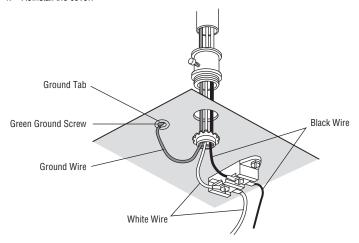

THERE ARE TWO OPTIONS FOR CONNECTING POWER: OPTION A TYPICAL WIRING

- 1. Plug in the garage door opener into a grounded outlet.
- 2. DO NOT run garage door opener at this time.

OPTION B PERMANENT WIRING

If permanent wiring is required by your local code, refer to the following procedure. To make a permanent connection through the 7/8 inch hole in the top of the motor unit (according to local code):

- 1. Remove the motor unit cover screws and set the cover aside.
- 2. Remove the attached 3-prong cord.
- Connect the black (line) wire to the screw on the brass terminal; the white (neutral) wire to the screw on the silver terminal; and the ground wire to the green ground screw. The opener must be grounded.
- Reinstall the cover.

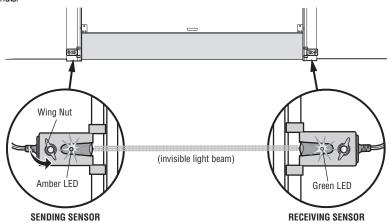

STEP 16 Aligning the safety reversing sensors

The door will not close if the sensors have not been installed and aligned correctly.

When the light beam is obstructed or misaligned while the door is closing, the door will reverse and the garage door opener lights will flash ten times. If the door is already open, it will not close.

Check to make sure the LEDs in both sensors are glowing steadily. The LEDs in both sensors
will glow steadily if they are aligned and wired correctly.

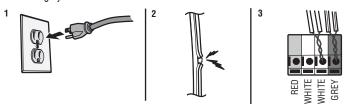

The sensors can be aligned by loosening the wing nuts, aligning the sensors, and tightening the wing nuts.

If the receiving sensor is in direct sunlight, switch it with sending sensor so it is on the opposite side of the door.

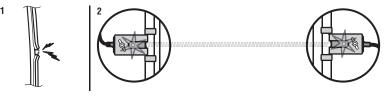

IF THE AMBER LED ON THE SENDING SENSOR IS NOT GLOWING:

- 1. Make sure there is power to the garage door opener.
- 2. Make sure the sensor wire is not shorted/broken.
- Make sure the sensor has been wired correctly: white wires to white terminal and white/black wires to grey terminal.

IF THE GREEN LED ON THE RECEIVING SENSOR IS NOT GLOWING:

- 1. Make sure the sensor wire is not shorted/broken.
- Make sure the sensors are aligned.

STEP 17 Ensure the door control is wired correctly

If the door control has been installed and wired correctly, the command LED on the Multi-Function Control Panel will blink.

Adjustments

Introduction

WARNING

Without a properly installed safety reversal system, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a closing garage door.

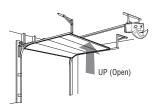

- Incorrect adjustment of garage door travel limits will interfere with proper operation of safety reversal system.
- After ANY adjustments are made, the safety reversal system MUST be tested. Door MUST reverse on contact with 1-1/2" (3.8 cm) high object (or 2x4 laid flat) on floor.

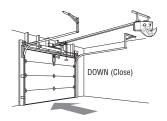

CAUTION

To prevent damage to vehicles, be sure fully open door provides adequate clearance.

Your garage door opener is designed with electronic controls to make setup and adjustments easy. The adjustments allow you to program where the door will stop in the open (UP) and close (DOWN) position. The electronic controls sense the amount of force required to open and close the door. The force is adjusted automatically when you program the travel.

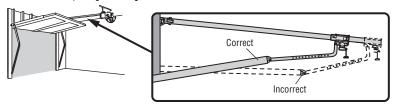

NOTE: If anything interferes with the door's upward travel it will stop. If anything interferes with the door's downward travel, it will reverse.

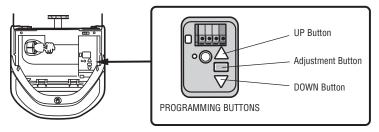

One-Piece Doors Only

When setting the UP travel for a one-piece door ensure that the door does not slant backwards when fully open (UP). If the door is slanted backwards this will cause unnecessary bucking and/or jerking when the door is opening or closing.

Programming Buttons

The programming buttons are located on the left side panel of the garage door opener and are used to program the travel. While programming, the UP and DOWN buttons can be used to move the door as needed.

Adjustments

STEP 1 Program the Travel

WARNING

Without a properly installed safety reversal system, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a closing garage door.

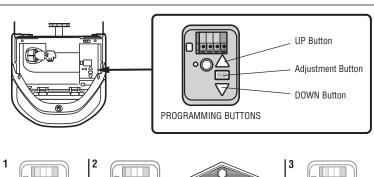

- Incorrect adjustment of garage door travel limits will interfere with proper operation of safety reversal system.
- After ANY adjustments are made, the safety reversal system MUST be tested. Door MUST reverse on contact with 1-1/2" (3.8 cm) high object (or 2x4 laid flat) on floor.

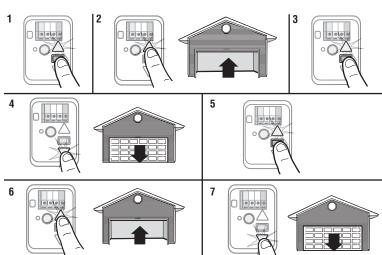

While programming, the UP and DOWN buttons can be used to move the door as needed.

- Press and hold the Adjustment Button until the UP Button begins to flash and/or a beep is heard.
- 2. Press and hold the UP Button until the door is in the desired UP position.
- Once the door is in the desired UP position press and release the Adjustment Button. The
 garage door opener lights will flash twice and the DOWN Button will begin to flash.

 IMPORTANT NOTE: For one-piece door installations refer to page 29.
- 4. Press and hold the DOWN button until the door is in the desired DOWN position.
- Once the door is in the desired DOWN position press and release the Adjustment Button. The garage door opener lights will flash twice and the UP Button will begin to flash.
- Press and release the UP Button. When the door travels to the programmed UP position, the DOWN Button will begin to flash.
- Press and release the DOWN Button. The door will travel to the programmed DOWN position.
 Programming is complete.

* If the garage door opener lights are flashing 5 times during the steps for Program the Travel, the programming has timed out. If the garage door opener lights are flashing 10 times during the steps for Program the Travel, the safety reversing sensors are misaligned or obstructed (refer to page 28). When the sensors are aligned and unobstructed, cycle the door through a complete up and down cycle using the remote control or the UP and DOWN buttons. Programming is complete. If you are unable to operate the door up and down, repeat the steps for Programming the Travel.

To watch a video, go to tinyurl.com/lkwbnhj

Adjustments

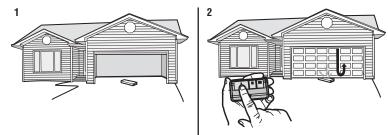

STEP 2 Test the Safety Reversal System

WARNING

Without a properly installed safety reversal system, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a closing garage door.

- Safety reversal system MUST be tested every month.
- After ANY adjustments are made, the safety reversal system MUST be tested. Door MUST reverse on contact with 1-1/2" (3.8 cm) high object (or 2x4 laid flat) on the floor.
 - With the door fully open, place a 1-1/2 inch (3.8 cm) board (or a 2x4 laid flat) on the floor, centered under the garage door.
 - Press the remote control push button to close the door. The door MUST reverse when it makes contact with the board.

If the door stops and does not reverse on the obstruction, increase the down travel (refer to Adjustment Step 1). Repeat the test. When the door reverses upon contact with the 1-1/2 inch board, remove the board and open/close the door 3 or 4 times to test the adjustment. If the garage door opener continues to fail the safety reversal test, call a trained door systems technician.

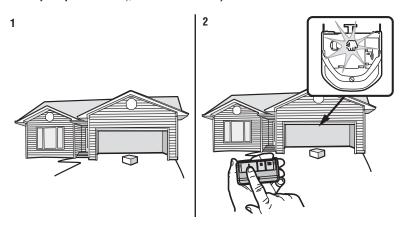

STEP 3 Test the Protector System®

A WARNING

Without a properly installed safety reversing sensor, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a closing garage door.

- 1. Open the door. Place the garage door opener carton in the path of the door.
- 2. Press the remote control push button to close the door. The door will not move more than an inch (2.5 cm), and the garage door opener lights will flash 10 times.

The garage door opener will not close from a remote control if the LED in either safety reversing sensor is off (alerting you to the fact that the sensor is misaligned or obstructed). If the garage door opener closes the door when the safety reversing sensor is obstructed (and the sensors are no more than 6 inches [15 cm] above the floor), call for a trained door systems technician.

MyQ® Smartphone Control

Get Connected

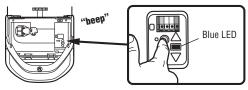

...and control your garage door opener with the MyQ® App.

You will need:

- · A smartphone or tablet
- Broadband Internet connection
- A strong Wi-Fi signal (2.4 Ghz, 802.11b/g/n required) in the garage, see page 3
- · Password for your home network
- MyQ[®] serial number located on the garage door opener

1. ACTIVATE "Wi-Fi LEARN" MODE

Press and release the yellow LEARN button on the garage door opener 3 times. The garage door opener will beep once and a blue light will flash. You have 20 minutes to complete the connection process.

2. CONNECT TO THE MyQ® Wi-Fi NETWORK

On your mobile device, go to Settings > Wi-Fi, and select the network with the "MyQ-" prefix.

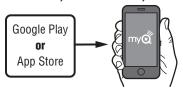

3. CONNECT THE GARAGE DOOR OPENER TO YOUR HOME WI-FI NETWORK

Launch the web browser (such as Safari or Chrome) on your mobile device and go to "setup.myqdevice.com". Follow the on-screen prompts to add the garage door opener to your home Wi-Fi network.

4. SETUP YOUR MyQ® ACCOUNT

Download the MyQ[®] app from the App StoreSM or Google Play[™] store. Sign up for your MyQ[®] account and add the MyQ[®] serial number to your account.

Congratulations you've successfully completed the setup. Enjoy MyQ® Smartphone Control!

In addition to controlling your garage door opener you can control your house lighting with additional MyQ^{\otimes} accessories, see page 41.

NOTES:

To erase the Wi-Fi settings, see page 37.

To learn more go to wifihelp.chamberlain.com.

IMPORTANT SAFETY INSTRUCTIONS

A WARNING

To reduce the risk of SEVERE INJURY or DEATH:

- 1. READ AND FOLLOW ALL WARNINGS AND INSTRUCTIONS.
- ALWAYS keep remote controls out of reach of children. NEVER permit children to operate or play with garage door control push buttons or remote controls.
- ONLY activate garage door when it can be seen clearly, it is properly adjusted, and there are no obstructions to door travel.
- ALWAYS keep garage door in sight and away from people and objects until completely closed.
 NO ONE SHOULD CROSS THE PATH OF THE MOVING DOOR.
- 5. NO ONE SHOULD GO UNDER A STOPPED, PARTIALLY OPENED DOOR.
- If possible, use emergency release handle to disengage trolley ONLY when garage door is CLOSED. Use caution when using this release with the door open. Weak or broken springs or unbalanced door could result in an open door falling rapidly and/or unexpectedly and increasing the risk of SEVERE INJURY or DEATH.
- NEVER use emergency release handle unless garage doorway is clear of persons and obstructions.
- NEVER use handle to pull garage door open or closed. If rope knot becomes untied, you could fall.

- 9. After ANY adjustments are made, the safety reversal system MUST be tested.
- Safety reversal system MUST be tested every month. Garage door MUST reverse on contact with 1-1/2" (3.8 cm) high object (or a 2x4 laid flat) on the floor. Failure to adjust the garage door opener properly increases the risk of SEVERE INJURY or DEATH.
- ALWAYS KEEP GARAGE DOOR PROPERLY BALANCED (see page 2). An improperly balanced door may NOT reverse when required and could result in SEVERE INJURY or DEATH.
- ALL repairs to cables, spring assemblies and other hardware, ALL of which are under EXTREME tension, MUST be made by a trained door systems technician.
- ALWAYS disconnect electric power to garage door opener BEFORE making ANY repairs or removing covers.
- This operator system is equipped with an unattended operation feature. The door could move unexpectedly. NO ONE SHOULD CROSS THE PATH OF THE MOVING DOOR.
- DO NOT install on a one-piece door if using devices or features providing unattended close.
 Unattended devices and features are to be used ONLY with sectional doors.

16. SAVE THESE INSTRUCTIONS.

Using your Garage Door Opener

- The garage door opener can be activated with a wall-mounted door control, remote control, wireless keyless entry, MyQ® Smartphone Control app or MyQ® Garage Door Monitor. When the door is closed and the garage door opener is activated the door will open. If the door senses an obstruction or is interrupted while opening the door will stop. When the door is in any position other than closed and the garage door opener is activated the door will close. If the garage door opener senses an obstruction while closing, the door will reverse. If the obstruction interrupts the sensor beam the garage door opener lights will blink 10 times. If the door is fully open, and the safety reversing sensors are not installed, or are misaligned, the door will not close from a remote control, TTC, or the MyQ® Smartphone Control app. However, you can close the door by holding the button on the door control or the ENTER button on the keyless entry until the door is fully closed.
- The garage door opener light bulbs will turn on when the opener is initially plugged in; power is restored after interruption, or when the garage door opener is activated. The lights will turn off automatically after 4-1/2 minutes. The lights will turn on when someone enters through the open garage door and the safety reversing sensor infrared beam is obstructed, see page 35. Use an incandescent A19 light bulb (100 watt maximum) or for maximum energy efficiency a 26W (100W equivalent) compact fluorescent light (CFL) bulb. NOTE: Do not use halogen, short neck, or specialty light bulbs as these may overheat the end panel or light socket. Do not use LED bulbs as they may reduce the range or performance of your remote controls.

To Open the Door Manually

A WARNING

To prevent possible SERIOUS INJURY or DEATH from a falling garage door:

- If possible, use emergency release handle to disengage trolley ONLY when garage door is CLOSED. Weak or broken springs or unbalanced door could result in an open door falling rapidly and/or unexpectedly.
- NEVER use emergency release handle unless garage doorway is clear of persons and obstructions.
- NEVER use handle to pull door open or closed. If rope knot becomes untied, you could fall.

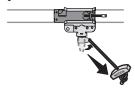

DISCONNECT THE TROLLEY

- 1. The door should be fully closed if possible.
- Pull down on the emergency release handle so the trolley release arm snaps to the vertical position. The door can now be raised and lowered as often as necessary.

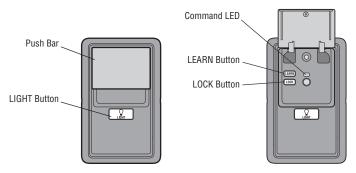

TO RE-CONNECT THE TROLLEY

 Pull the emergency release handle toward the garage door opener so the trolley release arm snaps to the horizontal position. The trolley will reconnect on the next UP or DOWN operation, either manually or by using the door control or remote control.

Multi-Function Control Panel

SYNCHRONIZE THE DOOR CONTROL: To synchronize the door control to the garage door opener, press the push bar until the garage door opener activates (it may take up to 3 presses). Test the door control by pressing the push bar; each press of the push bar will activate the garage door opener.

PUSH BAR: Press the push bar to open or close the door.

LIGHT BUTTON: Press the LIGHT button to turn the garage door opener lights on or off. When the lights are turned on they will stay on until the LIGHT button is pressed again, or until the garage door opener is activated. Once the garage door opener is activated the lights will turn off after the specified period of time (the factory default is 4-1/2 minutes). The LIGHT button will not control the lights when the door is in motion. The Light Feature will turn on the light on the garage door opener when someone enters through the open garage door and the safety reversing sensor infrared beam is obstructed.

To change the amount of time the lights stay on:

Press and hold the LOCK button (approximately 10 seconds) until the garage door opener lights flash. The time interval is indicated by the number of times the garage door opener lights flash:

- 1 flash is 1-1/2 minutes
- 2 flashes is 2-1/2 minutes
- 3 flashes is 3-1/2 minutes
- 4 flashes is 4-1/2 minutes

To cycle through the time intervals repeat the step above. If the push bar LED is continuously blinking, the LOCK feature needs to be turned off.

To turn the Light feature on or off (Factory default is On):

Turn OFF:

- 1. Close the garage door.
- 2. Start with the garage door opener lights "OFF".
- 3. Press and hold the LIGHT button (approximately 10 seconds) until the garage door opener lights turn off, then on again.

Turn ON:

- 1. Close the garage door.
- 2. Start with the garage door opener lights "ON".
- Press and hold the LIGHT button (approximately 10 seconds) until the garage door opener lights turn off, then on again.

LEARN BUTTON: Any compatible remote control, wireless keyless entry, or MyQ[®] devices can be programmed to the garage door using the LEARN button.

LOCK: Prevents the garage door opener from being activated by remote controls while still allowing activation from the door control and keyless entry.

Turn ON:

Press and hold the LOCK button for 2 seconds. The command LED will flash as long as the lock feature is on.

Turn OFF:

Press and hold the LOCK button for 2 seconds. The command LED will stop flashing and normal operation will resume.

TIMER-TO-CLOSE (DO NOT enable on one-piece doors)

The Timer-to-Close feature is not available on all door controls. Below is a list of door controls with the Timer-to-Close feature:

041A7305-1 Smart Control Panel and 041A7327-1 Motion Detecting Control Panel

The Timer-to-Close feature automatically closes the garage door after a specified time period. **DO NOT enable TTC if operating a one-piece door. TTC is to be used ONLY with sectional doors.** Factory default is set to off. The garage door opener will beep and the lights will flash before closing the door. The TTC feature will deactivate if the garage door encounters an obstruction twice; or the safety reversing sensors are incorrectly installed. The garage door will reverse open and WILL NOT close until the obstructions are clear or the safety reversing sensors are correctly installed. When the obstruction has been cleared or the safety reversing sensors have been aligned, the door will close when the garage door opener is activated. TTC WILL NOT work if the garage door opener is operating by battery power or if the safety reversing sensors are misaligned. This feature is NOT intended to be the primary method of closing the door. **A keyless entry should be installed in the event of an accidental lock out when using this feature.**

Remote Control and Keyless Entry

Pre-programmed remote control included, no need to program the remote.

To add or reprogram a remote control, follow the instructions below. Older Chamberlain remote controls are NOT compatible, see page 41 for compatible accessories.

PROGRAM USING THE DOOR CONTROL

- 1. Press the LEARN button on the door control to enter Programming Mode.
- . Press the LEARN button again, the LED will flash once.
- Remote Control: Press the button on the remote control that you wish to operate your garage door.

Keyless Entry: Enter a 4-digit personal identification number (PIN) of your choice on the keyless entry keypad. Then press the ENTER button.

The garage door opener lights will flash (or two clicks will be heard) when the code has been programmed.

The command LED will flash once.

2 The command LED wil flash once again.

3

ΛR

To watch a video, go to tinyurl.com/lcsf6xt

HomeLink[®]

If your vehicle is equipped with HomeLink, a Compatibility BridgeTM (not included) may be necessary for certain vehicles. Visit bridge.chamberlain.com to find out if a Bridge is needed.

To Erase the Memory

ERASE ALL REMOTE CONTROLS AND KEYLESS ENTRIES

 Press and hold the LEARN button on garage door opener until the learn LED goes out (approximately 6 seconds). All remote control and keyless entry codes are now erased. Reprogram any accessory you wish to use.

ERASE ALL REMOTE CONTROLS, KEYLESS ENTRIES AND MyQ® DEVICES FROM GARAGE DOOR OPENER

- Press and hold the LEARN button on garage door opener until the learn LED goes out (approximately 6 seconds).
- 2. Immediately press and hold the LEARN button again until the learn LED goes out. All codes are now erased. Reprogram any accessory you wish to use.

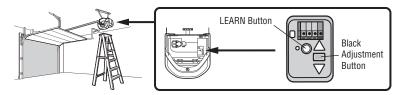

ERASE THE CONNECTION FROM GARAGE DOOR OPENER TO HOME WI-FI NETWORK

 Press and hold the black adjustment button on the garage door opener until 3 beeps are heard (Approximately 6 seconds).

ERASE A MyQ® ACCOUNT

- 1. Go to www.mychamberlain.com to access your MyQ® account.
- 2. Go to "Account" section.
- 3. Click "Delete Account".

Go to wifihelp.chamberlain.com for more details.

Maintenance

Maintenance Schedule

EVERY MONTH

- Manually operate door. If it is unbalanced or binding, call a trained door systems technician.
- Check to be sure door opens and closes fully. Adjust if necessary, see page 29.
- Test the safety reversal system. Adjust if necessary, see page 31.

EVERY YEAR

 Oil door rollers, bearings and hinges. The garage door opener does not require additional lubrication. Do not grease the door tracks.

The Remote Control Battery

A WARNING

To prevent possible SERIOUS INJURY or DEATH:

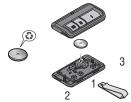

- NEVER allow small children near batteries.
- If battery is swallowed, immediately notify doctor.

To reduce risk of fire, explosion or chemical burn:

- . Replace ONLY with 3V CR2032 coin batteries.
- DO NOT recharge, disassemble, heat above 212°F (100°C) or incinerate.

The 3V CR2032 Lithium battery should produce power for up to 3 years. If the battery is low, the remote control's LED will not flash when the button is pressed.

To replace battery, pry open the case first in the middle (1), then at each side (2 and 3) with the visor clip. Replace the batteries with only 3V CR2032 coin cell batteries. Insert battery positive side up. Dispose of old batteries properly.

NOTICE: To comply with FCC and/or Industry Canada (IC) rules, adjustment or modifications of this transceiver are prohibited. THERE ARENOUSER SERVICEABLE PARTS.

This device comples with Part 15 of the FCC rules and IC RSS-210. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause lundesired operation.

This device must be installed in a way where a minimum 8"(20 cm) distance is maintained between users/bystanders and device.

AVIS: Les règles de la FCC et/ou d'Industrie Canada (IC) interdisent tout ajustement ou toute modification de ce récepteur. IL N'EXISTE AUCUNE PIÈCE SUSCEPTIBLE D'ÊTRE ENTRETENUE PAR L'UTILISATEUR.

Cet apparellest conforme aux dispositions de la partie 15 du règlement de la FCC et de înorme IC RSS-210. Son utilisation est assujettie aux deux conditions suivantes: (1) ce dispositif ne peut causer des interférences nuisibles, et (2) ce dispositif doit accepter toute interférence recue, y compris une interférence pouvant causer un fonctionnement non souhaité.

Cet appareil doit être installé de manière à laisser une distance d'au moins 20 cm (8 po) entre celui-ciet l'utilisateur ou toute personne.

Troubleshooting

Diagnostic Chart

Your garage door opener is programmed with self-diagnostic capabilities. The UP and DOWN arrows on the garage door opener flash the diagnostic codes.

DIAGNOSTIC CODE		SYMPTOM	SOLUTION	
Up Arrow Flash(es)	Down Arrow Flash(es)			
1	1	The garage door opener will not close and the light bulbs flash.	Safety reversing sensors are not installed, connected, or wires may be cut. Inspect sensor wires for a disconnected or cut wire.	
1	2	The garage door opener will not close and the light bulbs flash.	There is a short or reversed wire for the safety reversing sensors. Inspect safety sensor wire at all staple and connection points, replace wire or correct as needed.	
1	3	The door control will not function.	The wires for the door control are shorted or the door control is faulty. Inspect door control wires at all staple and connection points, replace wire or correct as needed.	
1	4	The garage door opener will not close and the light bulbs flash.	Safety reversing sensors are misaligned or were momentarily obstructed. Realign both sensors to ensure both LEDs are steady and not flickering. Make sure nothing is hanging or mounted on the door that would interrupt the sensor's path while closing.	
1	5	Door moves 6-8" (15-20 cm) stops or reverses.	Manually open and close the door. Check for binding or obstructions, such as a broken spring or door lock, correct as needed. Check wiring connections at travel module and at the logic board. Replace travel module if necessary.	
		No movement, only a single click.	Manually open and close the door. Check for binding or obstructions, such as a broken spring or door lock, correct as needed. Replace logic board if necessary.	
		Opener hums for 1-2 seconds no movement.	Manually open and close the door. Check for binding or obstructions, such as a broken spring or door lock, correct as needed. Replace motor if necessary.	
1	6	Door coasts after it has come to a complete stop.	Program travel to coasting position or have door balanced by a trained door systems technician.	
2	1-5	No movement, or sound.	Replace logic board.	
3	2	Unable to set the travel or retain position.	Check travel module for proper assembly, replace if necessary.	
4	1-4	Door is moving stops or reverses.	Manually open and close the door. Check for binding or obstructions, such as a broken spring or door lock, correct as needed. If the door is binding or sticking contact a trained door systems technician. If door is not binding or sticking attempt to reprogram travel (refer to page 30).	

Troubleshooting

DIAGNOSTIC CODE		SYMPTOM	SOLUTION	
Up Arrow Flash(es)	Down Arrow Flash(es)			
4	5	Opener runs approximately 6-8" (15-20 cm), stops and reverses.	Communication error to travel module. Check travel module connections, replace travel module if necessary.	
4	6	The garage door opener will not close and the light bulbs flash.	Safety reversing sensors are misaligned or were momentarily obstructed. Realign both sensors to ensure both LEDs are steady and not flickering. Make sure nothing is hanging or mounted on the door that would interrupt the sensor's path while closing.	

The garage door opener can beep for several reasons:

 Garage door opener has been activated through a device or feature such as Timer-to-Close or garage door monitor, see page 36.

My remote control will not activate the garage door:

- Verify the lock feature is not activated on the door control.
- · Reprogram the remote control.
- If the remote control will still not activate the door check the diagnostic codes to ensure the garage door opener is working properly.

My door will not close and the light bulbs blink on my motor unit:

The safety reversing sensor must be connected and aligned correctly before the garage door opener will move in the down direction.

• Verify the safety reversing sensors are properly installed, aligned and free of any obstructions.

My garage door opener light(s) will not turn off when the door is open:

The garage door opener is equipped with a feature that turns the light on when the safety reversing sensors have been obstructed. These features can be disabled using the door control, see page 35.

My neighbor's remote control opens my garage door:

Erase the memory from your garage door opener and reprogram the remote control(s).

My vehicle's Homelink® is not programming to my garage door opener:

Compatibility Bridge[™] (not included) may be necessary for certain vehicles. Visit bridge.chamberlain.com to find out if a Bridge is needed.

Wi-Fi troubleshooting

The garage door opener will NOT enter Wi-Fi LEARN mode:

- After the initial installation of the garage door opener, the garage door opener must complete a full cycle (open and closed) before the Wi-Fi LEARN mode can be activated.
- If there has been a recent power outage, the garage door opener must complete a full cycle before the Wi-Fi LEARN mode can be activated.

See page 32 to activate Wi-Fi LEARN mode.

If your black adjustment button is not solid green go to wifihelp.chamberlain.com.

Accessories

6608CD

8 Foot (2.4 m) Rail Extension:

To allow an 8 foot (2.4 m) door to open fully.

041A5281-1 Extension Brackets:

(Optional) For safety reversing sensor installation onto the wall or floor.

940EV

Wireless Keypad:

For use outside of the home to enable access to the garage using a 4-digit PIN. Works with ALL Chamberlain openers from 1993-present. MyQ® compatible.

953EV

Remote Control:

6610CD

10 Foot (3 m) Rail Extension:

To allow a 10 foot (3 m) door to open fully.

CLLP1

Laser Parking Assistant:

Park in the right spot every time! A laser beam is activated by your garage door opener and projected on to the dashboard of your vehicle to quide perfect parking.

956EV

Keychain Remote Control:

MyQ® Accessories

PILCEV

MyQ® Remote Lamp Control: Monitor and control this plug in lamp switch with the MyQ® Smartphone App.

WSLCEV

MyQ® Interior/Exterior Light Switch

Monitor and control this wall light switch with the MvQ® Smartphone App.

CIGBU

MyQ® Internet Gateway:

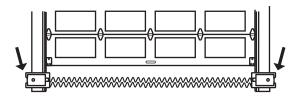

Offers longer range wireless signal than standard Wi-Fi. Plugs into your home router as an optional way to provide MyQ® Smartphone Control for your garage door opener and MyQ® light controls.

Warranty

STOP!

This garage door opener **WILL NOT** work until the safety reversing sensors are properly installed and aligned.

Contact Information

For installation and service information call:

1-800-528-9131

Before calling, please have the model number of the garage door opener.

If you are calling about a Troubleshooting issue, it is recommended that you have access to your garage door opener while calling.

If you are ordering a repair part please have the following information: part number, part name, and model number.

CHAMBERLAIN® LIMITED WARRANTY

The Chamberlain Group, Inc.® ("Seller") warrants to the first retail purchaser of this product, for the residence in which this product is originally installed, that it is free from defects in materials and/or workmanship for a specific period of time as defined below (the "Warranty Period"). The warranty period commences from the date of purchase.

WARRANTY PERIOD			
Parts	Motor	Accessories	
1 Year	10 Years	1 Year	

The proper operation of this product is dependent on your compliance with the instructions regarding installation, operation, and maintenance and testing. Failure to comply strictly with those instructions will void this limited warranty in its entirety. If, during the limited warranty period, this product appears to contain a defect covered by this limited warranty, call 1-800-528-9131, toll free, before dismantling this product. You will be advised of disassembly and shipping instructions when you call. Then send the product or component, pre-paid and insured, as directed to our service center for warranty repair. Please include a brief description of the problem and a dated proof- of-purchase receipt with any product returned for warranty repair. Products returned to Seller for warranty repair, which upon receipt by Seller are confirmed to be defective and covered by this limited warranty, will be repaired or replaced (at Seller's sole option) at no cost to you and returned pre-paid. Defective parts will be repaired or replaced with new or factory rebuilt parts at Seller's sole option. [You are responsible for any costs incurred in removing and/or reinstalling the product or any component.]

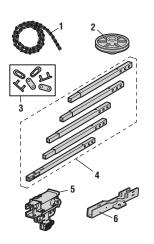

ALL IMPLIED WARRANTIES FOR THE PRODUCT, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO THE APPLICABLE LIMITED WARRANTY PERIOD SET FORTH ABOVE FOR THE RELATED COMPONENT(S), AND NO IMPLIED WARRANTIES WILL EXIST OR APPLY AFTER SUCH PERIOD. Some States and Provinces do not allow limitations on how long an implied warranty lasts. so the above limitation may not apply to you. THIS LIMITED WARRANTY DOES NOT COVER NON-DEFECT DAMAGE. DAMAGE CAUSED BY IMPROPER INSTALLATION. OPERATION OR CARE (INCLUDING, BUT NOT LIMITED TO ABUSE, MISUSE, FAILURE TO PROVIDE REASONABLE AND NECESSARY MAINTENANCE. UNAUTHORIZED REPAIRS OR ANY ALTERATIONS TO THIS PRODUCT). LABOR CHARGES FOR REINSTALLING A REPAIRED OR REPLACED UNIT, REPLACEMENT OF CONSUMABLE ITEMS (E.G., BATTERIES IN REMOTE CONTROL TRANSMITTERS AND LIGHT BULBS), OR UNITS INSTALLED FOR NON-RESIDENTIAL USE. THIS LIMITED WARRANTY DOES NOT COVER ANY PROBLEMS WITH, OR RELATING TO, THE GARAGE DOOR OR GARAGE DOOR HARDWARE. INCLUDING BUT NOT LIMITED TO THE DOOR SPRINGS. DOOR ROLLERS. DOOR ALIGNMENT OR HINGES. THIS LIMITED WARRANTY ALSO DOES NOT COVER ANY PROBLEMS CAUSED BY INTERFERENCE. UNDER NO CIRCUMSTANCES SHALL SELLER BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL OR SPECIAL DAMAGES ARISING IN CONNECTION WITH USE, OR INABILITY TO USE. THIS PRODUCT. IN NO EVENT SHALL SELLER'S LIABILITY FOR BREACH OF WARRANTY, BREACH OF CONTRACT, NEGLIGENCE OR STRICT LIABILITY EXCEED THE COST OF THE PRODUCT COVERED HEREBY. NO PERSON IS AUTHORIZED TO ASSUME FOR US ANY OTHER LIABILITY IN CONNECTION WITH THE SALE OF THIS PRODUCT.

Some states and provinces do not allow the exclusion or limitation of consequential, incidental or special damages, so the above limitation or exclusion may not apply to you. This limited warranty gives you specific legal rights, and you may also have other rights, which vary from state to state and province to province.

Repair Parts

Rail Assembly Parts
