READ AND SAVE THESE INSTRUCTIONS

1. To reduce the risk of electric shock, insure electricity has been turned off at the circuit breaker or fuse box before beginning.

2. All wiring must be in accordance with the National Electrical Code ANSI/NFPA 70-1999 and local electrical codes. Electrical installation should be performed by a qualified licensed electrician.

3. **WARNING:** To reduce the risk of fire or electric shock, do not use this fan with any solid-state speed control device.

4. **CAUTION:** To reduce the risk of personal injury, use only the screws provided with the outlet box.

5. The outlet box and support structure must be securely mounted and capable of reliably supporting a minimum of 35 pounds. Use only UL Listed outlet boxes marked “FOR FAN SUPPORT.”

6. The fan must be mounted with a **minimum of 7 feet clearance** from the trailing edge of the blades to the floor.

7. Do not operate reversing switch while fan blades are in motion. Fan must be turned off and blades stopped before reversing blade direction.

8. Avoid placing objects in path of the blades.

9. To avoid personal injury or damage to the fan and other items, be cautious when working around or cleaning the fan.

10. Do not use water or detergents when cleaning the fan or fan blades. A dry dust cloth or lightly dampened cloth will be suitable for most cleaning.

11. After making electrical connections, spliced conductors should be turned upward and pushed carefully up into outlet box. The wires should be spread apart with the grounded conductor and the equipment-grounding conductor on one side of the outlet box.

12. Electrical diagrams are for reference only. Light kits that are not packed with the fan must be UL listed and marked suitable for use with the model fan you are installing. Switches must be UL General Use Switches. Refer to the instructions packaged with the light kits and switches for proper assembly.

2. Unpacking Your Fan
Tools Required
Phillips screw driver, straight slot screw driver, adjustable wrench, step ladder, and wire cutters.

Mounting Options
If there isn’t an existing outlet box, then read the following instructions. Disconnect the power by removing fuses or turning off circuit breakers.

Secure the outlet box directly to the building structure. Use appropriate fasteners and building materials. The outlet box and its support must be able to fully support the moving weight of the fan (at least 35 lbs.) Do not use plastic outlet boxes.

WARNING
TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR PERSONAL INJURY, MOUNT FAN ONLY TO AN OUTLET BOX MARKED ACCEPTABLE FOR FAN SUPPORT AND USE THE MOUNTING SCREWS PROVIDED WITH THE OUTLET BOX. OUTLET BOXES COMMONLY USED FOR THE SUPPORT OF LIGHTING FIXTURES MAY NOT BE ACCEPTABLE FOR FAN SUPPORT AND MAY NEED TO BE REPLACED. CONSULT A LICENSED ELECTRICIAN IF IN DOUBT.

Figures 1, 2, and 3 are examples of different ways to mount the outlet box.

Note: You may need a longer downrod to maintain proper blade clearance when installing on a steep, sloped ceiling. The maximum angle allowable is 30°. If the canopy touches downrod, remove the decorative canopy bottom cover and turn the canopy 180° before attaching the canopy to the mounting plate.

To hang your fan where there is an existing fixture but no ceiling joist, you may need an installation hanger bar as shown in Figure 4 (available at your Hampton Bay retailer).
**Hanging the Fan**

**REMEMBER** to turn off the power. Follow the steps below to hang your fan properly.

**NOTE:** This ceiling fan is supplied with two types of hanging assemblies; the standard ceiling installation using the downrod with ball and socket mounting, and the “close-to-ceiling” mounting. The “close-to-ceiling” mounting is recommended in rooms with less than 8-foot ceilings or in areas where additional space is desired from the floor to the fan blades. When using standard downrod installation, the distance from the ceiling to the bottom of the fan blades will be approximately 12 inches. The “close-to-ceiling” installation reduces the distance from the ceiling to the bottom of the fan blades to approximately 9 inches.

Once you have decided which ceiling installation you will use, proceed with the following instructions. Where necessary, each section of the instructions will note the different procedures to follow for the two types of installation.

**Standard Ceiling Mounting**

1. **Remove the canopy ring from the canopy by turning the ring to the right until it unlocks** (Figure 5).

2. **Remove the mounting plate from the canopy by loosening the four screws on the top of the canopy. Remove the two non-slotted screws and loosen the slotted screws. This will enable you to remove the mounting plate** (Figure 6).

3. **Route the wires exiting the top of the fan motor through the decorative motor collar cover then the canopy ring. Make sure the slot openings are on top. Route the wires through the canopy and then through the ball/downrod assembly** (Figure 7).

---

**CAUTION**

When mounting the fan on a sloped ceiling, the standard ball/downrod mounting method must be used. The mounting plate must be mounted so that the slot openings are on the lower side by sliding the mounting plate from the top down. For a greater mounting angle, remove the decorative canopy bottom cover (Figure 9).
4. Loosen, but do not remove, the set screw on the collar on the top of the motor housing.

5. Align the holes at the bottom of the downrod with the holes in the collar on top of the motor housing (Figure 7). Carefully insert the hanger pin through the holes in the collar and downrod. Be careful not to jam the hanger pin against the wiring inside the downrod. Insert the locking pin through the hole near the end of the hanger pin until it snaps into its locked position, as noted in the circle inset of Figure 7.

**WARNING**

**FAILURE TO PROPERLY INSTALL THE LOCKING PIN AS NOTED IN STEP 5 COULD RESULT IN FAN LOOSENING AND POSSIBLY FALLING.**

6. Re-tighten the set screws on the collar on top of the motor housing (Figure 8).

7. Proceed to “Installing the Fan” section.

---

### “Close-to-Ceiling” Mounting

1. Remove the canopy ring from the canopy by turning the ring to the right until it unlocks (Figure 5).

2. Remove the mounting plate from the canopy by loosening the four screws on the top of the canopy. Remove the two non-slotted screws and loosen the slotted screws. This will enable you to remove the mounting plate (Figure 6).

3. Remove the decorative canopy bottom cover from the canopy by depressing the three studs (Figure 9).

---

**Figure 5**

---

4. Remove three of the six screws and lock-washers (every other one) securing the motor collar to the top of the fan motor housing (Figure 10).

5. Place the rubber gasket over the remaining three screws, route the wires exiting the top of the fan motor through the canopy ring (make sure the slot openings are on top), then proceed to place the ceiling canopy over the collar at the top of the motor (Figure 11).

---

**Figure 9**

---

6. Align the mounting holes with the holes in the motor and fasten, using the three screws and lock-washers removed in step 4 (Figure 11).

7. Tighten the mounting screws securely.

**WARNING**

**FAILURE TO PROPERLY INSTALL SET SCREWS IN STEP 7 COULD RESULT IN FAN LOOSENING AND POSSIBLY FALLING.**

---

**Figure 8**

---

**Figure 10**

---

**Figure 11**
WHEN USING THE STANDARD BALL/DOWNROD MOUNTING, THE TAB IN THE RING AT THE BOTTOM OF THE MOUNTING PLATE MUST REST IN THE GROOVE OF THE HANGER BALL. FAILURE TO PROPERLY SEAT THE TAB IN THE GROOVE COULD CAUSE DAMAGE TO WIRING.

Installing Fan to the Outlet Box

1. Pass the 120-volt supply wires through the center hole in the ceiling mounting bracket as shown in Figure 7.
2. Install the ceiling mounting plate on the outlet box by sliding the mounting plate over the two screws provided with the outlet box. When using close-to-ceiling mounting, it is important that the mounting plate be level. If necessary, use leveling washers (not included) between the mounting plate and the outlet box. Note that the flat side of the mounting plate is toward the outlet box (Figure 7).
3. Securely tighten the two mounting screws.
4. Carefully lift the assembly up to the ceiling mounting plate. If using Close-to-Ceiling mounting, hang the fan on the hook provided by utilizing one of the holes at the outer rim of the ceiling canopy (Figure 12). If using standard mounting, seat the hanger ball in the mounting plate socket. Make sure the tab on the mounting bracket socket is properly seated in the groove in the hanger ball (Figure 12).

THE HOOK AS SHOWN IN FIGURE 12 IS ONLY TO BALANCE FAN WHILE ATTACHING WIRING. FAILURE TO HANG AS SHOWN IN FIGURE 12 MAY RESULT IN HOOK BREAKING, CAUSING THE FAN TO FALL. HOOK MUST PASS FROM INSIDE TO OUTSIDE OF CANOPY.

5. Turn the wire connecting nuts upward and push the wiring into the outlet box.

Making the Electrical Connections

REMEMBER to disconnect the power. If you feel you do not have enough electrical wiring knowledge or experience, have your fan installed by a licensed electrician.

1. Connect the two green fan ground wires located on the downrod and mounting plate to the household ground wire. When using Close-to-Ceiling mounting, there is only one green ground wire from the ceiling mounting plate since the ball/downrod assembly is not used.
2. Connect the fan light supply (blue) wire and the fan supply (black) wire to the black household supply wire as shown in figure 13.
3. Connect the neutral fan (white) wire to the white neutral household wire.
4. After connecting the wires, spread them apart so that the green and white wires are on side of the outlet box and the black wire is on the other side.
5. Turn the wire connecting nuts upward and push the wiring into the outlet box.
Each wire nut (wire connector) supplied with this fan is designed to accept up to one 12 gauge house wire and two wires from the fan. If you have larger than 12 gauge house wiring or more than one house wire to connect to the fan wiring, consult an electrician for the proper size wire nuts to use.

**Warning**

To reduce the risk of fire or electric shock, do not use a wall mounted solid state speed control with this fan. It will permanently damage the electronic circuitry.

**Warning**

When using the standard ball/downrod mounting, the tab in the ring at the bottom of the mounting plate must rest in the groove of the hanger ball. Failure to properly seat the tab in the groove could cause damage to wiring.

### Finishing the Fan Installation

**Standard Ceiling Mounting**

**Warning**

1. Align the locking slots of the ceiling canopy with the two screws in the mounting plate. Push up to engage the slots and turn clockwise to lock in place. Immediately tighten the two mounting screws firmly.

2. Install the remaining two mounting screws into the holes in the canopy and tighten firmly.

3. Install the decorative canopy ring by aligning the ring’s slots with the screws in the canopy. Rotate the ring clockwise to lock in place.

4. You may now proceed to attaching the fan blades.

Figure 13
CLOSE-TO-CEILING MOUNTING
1. Carefully unhook the fan from the mounting plate and align the locking slots of the ceiling canopy with the two screws in the mounting plate. Push up to engage the slots and turn clockwise to lock in place. Immediately tighten the two mounting screws firmly.

WARNING

LOCKING SLOTS OF CEILING CANOPY ARE PROVIDED ONLY AS AN AID TO MOUNTING. DO NOT LEAVE FAN ASSEMBLY UNATTENDED UNTIL ALL FOUR CANOPY SCREWS ARE ENGAGED AND FIRMLY TIGHTENED.

2. Install the remaining two mounting screws into the holes in the canopy and tighten firmly.

3. Install the decorative canopy ring by aligning the ring’s slots with the screws in the canopy. Rotate the ring clockwise to lock in place.

4. You may now proceed to attaching the fan blades.

Attaching the Fan Blades
1. Attach blade to blade bracket using the screws as shown in figure 14. Please note that the rubber washers are pre-attached to the blade bracket. Start a screw into the bracket. Repeat for the two remaining screws.

2. Tighten each screw securely.

3. Fasten the blade assembly to the motor by inserting the alignment post into the slot on the bottom of the motor and tightening the blade bracket screws. Please note that the blade bracket screws are pre-installed into the blade bracket (Figure 14a).

4. Repeat steps 1-3 for the remaining blades.

Blade Balancing
All blades are grouped by weight. Because natural woods vary in density, the fan may wobble even though the blades are weight matched. The following procedure should correct most fan wobble. Check after each step.

1. Check that all blade and blade bracket screws are secure.

2. Most fan wobble problems are caused when...
blade levels are unequal. Check this level by selecting a point on the ceiling above the tip of one of the blades. Measure from a point on the center of each blade to the point on the ceiling. Measure this distance as shown in Figure 16. Rotate the fan until the next blade is positioned for measurement. Repeat for each blade. Measurement deviations should within 1/8”. Run the fan for 10 minutes.

3. Use the enclosed Blade Balancing Kit if the blade wobble is still noticeable.

Light Kit Option

CAUTION - To reduce the risk of electrical shock, disconnect the electrical supply circuit to the fan before installing light kit.

FAN WITH LIGHT KIT (Figure 17)
1. Remove the three mounting screws on the black bracket below the motor.
2. Remove the the finial, lower cap, hex nut and rubber washer from the light fixture.
3. Remove the nut and washer from the top of the light fixture.
4. Attach the light kit to the switch housing by first removing the decorative cover on the bottom of the switch housing. Insert the wires from the top of the light kit through the hole in the bottom of the switch housing. Thread the light kit into the hole on the bottom of the switch housing. Secure with the nut and washer provided.
5. Connect the wires from the light kit to the blue and white wires in the switch housing marked for light kit connection. See page 6 for wiring.
6. Connect the wires exiting the bottom of the motor with the switch housing by connecting the molded adaptor plugs together.
7. Slide the switch housing and secure it to the black bracket using the three screws that were removed in step1.
8. With power off, install candelabra E12 base bulbs (Max. 60W, included) to the lamp sockets.

WARNING

OVER LAMPPING THE FAN WILL RESULT IN THE FAN LIGHTS SHUTTING DOWN UNTIL THE PROPER WATTAGE OF BULBS ARE INSTALLED. RESET THE LIGHTS BY TURNING OFF, REPLACE BULBS WITH THE POWER ON.

9. Place the glass bowl over the threaded stem of the light fixture and up against the upper cap.

10. Place the decorative leaves, rubber washer, hex nut and cap over the threaded stem of the light fixture, direct the fan pull chain through the side hole on the glass.
11. Place the finial over the threaded stem and direct the light pull chain through the hole of the finial, tighten the finial securely.
12. Attach the pull chain extensions provided to the light pull chain and the fan pull chain.
Turn on the power and check the operation of the fan. The pull chain controls the fan speeds as follows: 1 pull - High, 2 pulls - Medium, 3 pulls - Low and 4 pulls - Off.

Speed settings for warm or cool weather depend on factors such as room size, ceiling height, number of fans, and so on.

The slide switch controls the direction: forward (switch left) or reverse (switch right).

**Warm weather** - (Forward) A downward air flow creates a cooling effect as shown in Figure 18. This allows you to set your air conditioner on a higher setting without affecting your comfort.

**Cool weather** - (Reverse) An upward air flow moves warm air off the ceiling as shown in Figure 19. This allows you to set your heating unit on a lower setting without affecting your comfort.

---

**WARNING**

TO REDUCE THE RISK OF PERSONAL INJURY, DO NOT BEND THE BLADE HOLDERS WHILE INSTALLING, BALANCING THE BLADES, OR CLEANING THE FAN. DO NOT INSERT FOREIGN OBJECTS BETWEEN ROTATING BLADES.

---

**NOTE**

WAIT FOR FAN TO STOP BEFORE REVERSING THE DIRECTION OF BLADE ROTATION.
Care of Your Fan

Here are some suggestions to help you maintain your fan.

1. Because of the fan’s natural movement, some connections may become loose. **Check the support connections, brackets, and blade attachments twice a year.** Make sure they are secure. **(It is not necessary to remove fan from ceiling.)**

2. Clean your fan periodically to help maintain its new appearance over the years. Do not use water when cleaning, this could damage the motor, or the wood or possibly cause an electrical shock. Use only a soft brush or lint-free cloth to avoid scratching the finish. The plating is sealed with a lacquer to minimize discoloration or tarnishing. **Warning – Make sure the power is off before cleaning your fan.**

3. You can apply a light coat of furniture polish to the wood for additional protection and enhanced beauty. Cover small scratches with a light application of shoe polish.

4. **There is no need to oil your fan.** The motor has permanently lubricated sealed ball bearings.

Troubleshooting

**Problem** | **Solution**
---|---
Fan will not start | 1. Check main and branch circuit fuses or breakers
2. Check line wire connections to the fan and switch wire connections in the switch housing. **CAUTION: Make sure main power is off.**

Fan sounds noisy | 1. Make sure all motor housing screws are snug.
2. Make sure the screws that attach the fan blade bracket to the motor hub are tight.
3. Make sure wire nut connections are not rattling against each other or the interior wall of the switch housing. **CAUTION: Make sure power is off.**
4. Allow a 24-hour “breaking in” period. Most noises associated with a new fan disappear during this time.
5. If using the Ceiling Fan light kit, make sure the screws securing the glassware are tight. Check that the light bulb is also secure.
6. Make sure the canopy is a short distance from the ceiling. It should not touch the ceiling.
7. Make sure your outlet box is secure and rubber isolator pads were used between the mounting plate and outlet box.

**WARNING**

**MAKE SURE THE POWER IS OFF AT THE ELECTRICAL PANEL BOX BEFORE YOU ATTEMPT TO MAKE ANY REPAIRS. REFER TO THE SECTION, “MAKING ELECTRICAL CONNECTIONS.”**
