

On behalf of the entire team at Activa North America, we thank you for your purchase of our intelligent, photocatalytic paint.

This Paint is self-cleaning, odor reducing, anti-microbial, and contains no VOC's. The photocatalytic process was discovered in Japan in the late 1960's, and we now bring this Nano-technology to you. We are glad to have you on the forefront of this sustainable process.

- **ELIMINATES** airborne toxic pollutants produced by cars, factories, varnishes, glues, heating, etc.
- **REDUCES** the presence of microorganisms (bacteria, fungi, etc.) by destroying the substances they feed on.
- **REMOVES** dirt from surfaces. This ensures that your walls stay **CLEANER** for **LONGER** without washing or repainting.
- **ELIMINATES** odors produced by organic substances present in the air.

A couple hints as you start your painting process:

1. Add a cup of water to your gallon of paint the first time you open it. We manufacture in Spain, and time and travel can cause some of the water to leave the product. Any type of water is fine, just make sure it's clean tap, bottled, or filtered.
2. Our white paint (Photo Deco, Wall, and Lacq) can be used as a tint base. Just have your paint store add the colorant, and you will need to hand blend this in. Chances are the machines will not be able to shake our containers after they are opened. Make sure you added the cup of water!
3. This paint uses light energy to clean and purify. Open the drapes or blinds when the light are not turned on for this process to be constantly working.
4. Let us know what you think, and look for us at www.activacoating.com, Facebook, and Twitter. We can also be reached at 800 660-6238.
