Any Hard Surface  
Easy-To-Follow Formulas  
Create Marbling or Graining**

## Color formulas inside

### HINTS & TIPS

- To save time, pre-fill deep gouges with untinted putty and let dry before topping off with final matching color.
- Save all putty mixes (including tests) under plastic wrap or on cards for 2nd application, marbling tests, etc.
- For very fine repairs, trim brush to make it smaller before applying lacquer.
- To achieve very light colors, add a small amount of the putty/tint mixture to some fresh putty until the desired lightness is achieved.
- To slightly alter colors, add tint to some fresh putty first, then add that to your existing mixture.
- If more space is needed, the back panel of package can be cut off and serve as a mixing plate.
- Putty will darken greatly as it dries.
- For minor scratches, try our ScratchAway concealer or our ScratchCure Repair Pens.
- Always test graining on a scrap piece of putty.
- Put some variations of your mix on cards or post-its, let dry, then hold against your needed repair areas. Save scraps to test graining.
- For a more realistic repair, match the background color (usually much lighter) first, then add darker foreground graining or marbling.
- Final lacquer application can darken some formulas.

# FloorFix Formula Card

1	20 White	Add drops to 1 line putty
2	5 White	Add drops to 1 line putty
3	Putty Only	
4	1 A 10 White	Add drops to 1 line putty
