Caring For Coddle /Woven Fabrics

Our fabrics are built to last!

All our fabrics are woven to precise standards for color fastness, abrasion, inerrant stain resistance and safety. They're also resistant to pilling, mold and mildew and impervious to attacks by moths, silverfish and insect pests.

Here are some recommendations to care for and extend the life of your Coddle product.

Avoid Heat!

Take care to avoid touching external walls or radiators to avoid moisture build up and scorch marks.

Avoid Direct Sunlight

The UV rays will fade any colored fabric so keep them out of direct sunlight whenever possible.

Vacuum Regularly!

Dust is a long-term villain to woven fabrics. Over time it works its way into each and every fiber, which leads to a breakdown of the fabric. So, extend the life of your couch by regular low suction vacuuming.

Pilling

If this does occur, we recommend a simple battery operated pilling tool.

Spot Cleaning Coddle Fabrics

Coddle Fabrics inherent stain resistance allows easy removal for most stains from non liquid repellent treated fabric.

Treat spills and stains as soon as possible. Gently scrape any soil or mop any liquid from the surface.

Always apply cleaning agents to a clean cloth first, not directly to the fabric surface. This method will help prevent channeling of stains into the fabric textures or patterns.

Use warm water and non-toilet soaps which do not contain optical brighteners; like Velvet Soap, Lux Flakes, or Softly. Mix a small amount of soap and warm water and apply to the stain, rubbing gently. Blot dry with a clean towel. Apply cold water and blot dry again. Then with a hairdryer working outward from the center of the stain, dry quickly to prevent rings forming. For the best results, consider cleaning whole panels of fabric this way

Once residual stains have been removed, deodorize the affected area to remove any lingering odors. Then re-apply fabric protector to restore any liquid repellency lost during stain removal.
