

FastStone+ Wall Tile Care & Maintenance

With proper care and maintenance, your FastStone+ wall tile is made to be highly durable and long-lasting. Although pre-sealed, natural slate stone surfaces absorb liquids and moisture. Even a sealed surface can stain if left in contact with a staining agent for a long period of time. Therefore, all stains and spills should be wiped and cleaned as soon as possible.

REGULAR CLEANING

Avoid using cleaning chemicals on your wall after installation.

DO NOT USE commercial enzyme-based cleaners.

Regular damp wiping is recommended to keep your wall looking its best.

For deep cleaning, or to address messy or sticky spills, use a detergent cleaner designed for slate or natural stone. Avoid cleaning products that contain wax or paraffin.

For more information on maintenance, please contact us or visit our website www.faststoneplus.com.
