Chapter 1 Introduction

Thank you for purchasing Laview Premium Network Video Recorder System. Your LV-N System Represents the state of art in Network video Recording and is designed for reliable and trouble-free performance. This User Guide is designed to illustrate the most common feature. Content of User manual may vary between different model number/ device. For complete instruction/ user manual please refer to the Utility disk that comes with the kit or go to our website at www.laviewusa.com/support

Front Panel

Description of Control Panel Buttons

No.	Na	me	Function Description
		POWER	Turns green when NVR is powered up.
		READY	The indicator is green when the device is running normally.
			The light is green when the IR remote control is enabled;
		STATUS	The light is red when the function of the composite keys (SHIFT) are used;
1	Status Indicators		The light is out when none of the above condition is met.
		ALARM	The light is red when there is an alarm occurring.
		HDD	Blinks red when HDD is reading/writing.
		Tx/Rx	Blinks green when network connection is functioning normally.
2	DVD-	·R/W	Slot for DVD-R/W.
3 Control Buttons			In menu mode, the direction buttons are used to navigate between different fields and items and
			select setting parameters.
			In playback mode, the Up and Down buttons are used to speed up and slow down record
			playing, and the Left and Right buttons are used to move the recording 30s forwards or
		DIRECTION	backwards.
			In the image setting interface, the up and down button can adjust the level bar of the image
	Control Buttons		parameters.
			In live view mode, these buttons can be used to switch channels.
		ENTER	The Enter button is used to confirm selection in menu mode; or used to check checkbox fields
			and ON/OFF switch.
			In playback mode, it can be used to play or pause the video.
			In single-frame play mode, pressing the Enter button will play the video by a single frame.
			In auto sequence view mode, the buttons can be used to pause or resume auto sequence.
			Switch between the numeric or letter input and functions of the composite keys. (Input letter or
		SHIFT	numbers when the light is out; Realize functions when the light is red.)
4	Composite Keys	Numbers/	
		letters	Key in numbers or letters in NVR user interface.
			Move the active selection in a menu. It will move the selection up and down.
_	5 JOG SHUTTLE Control		In Live View mode, it can be used to cycle through different channels.
5			In the Playback mode, it can be used to jump 30s forward/backward in video files.
			In PTZ control mode, it can control the movement of the PTZ camera.
6	POWER	ON/OFF	Power on/off switch.
_			Universal Serial Bus (USB) ports for additional devices such as USB mouse and USB Hard
7	USB Interfaces		Disk Drive (HDD).

Rear Panel

Description of Rear Panel Interfaces

No.	Item	Description
1	VIDEO OUT	BNC connector for video output.
2	CVBS AUDIO OUT	BNC connector for audio output. This connector is synchronized with CVBS video output.
	VGA AUDIO OUT	BNC connector for audio output. This connector is synchronized with VGA video output.
3	LINE IN	BNC connector for audio input.
4	RS-232 Interface	Connector for RS-232 devices.
5	VGA	DB9 connector for VGA output. Display local video output and menu.
6	HDMI	HDMI video output connector.
7	eSATA (Optional)	Connects external SATA HDD, CD/DVD-RM.
8	LAN Interface	Connector for LAN (Local Area Network).
9	Termination Switch	RS-485 termination switch.
		Up position shows the RS-485 is not terminated.
		Down position shows the RS-485 is terminated with 120Ω resistance.
	RS-485 Interface	Connector for RS-485 devices. T+ and T- pins connects to R+ and R- pins of PTZ receiver
		respectively.
		D+, D- pin connects to Ta, Tb pin of controller. For cascading devices, the first NVR's D+, D-
10	Controller Port	pin should be connected with the D+, D- pin of the next NVR.
	ALARM IN	Connector for alarm input.
	ALARM OUT	Connector for alarm output.
11	GROUND	Ground (needs to be connected when NVR starts up).
12	AC 100V~240V	AC 100V ~ 240V power supply.
13	POWER	Switch for turning on/off the device.
14	USB interface	Universal Serial Bus (USB) ports for additional devices such as USB mouse and USB Hard
		Disk Drive (HDD).
15	Network Interfaces with PoE	Network interface for the cameras and to provide power over Ethernet.
	function	

IR Remote Control Operations

The NVR may also be controlled with the included IR remote. Complete instruction on remote control can be found in the online user manual at our download center at www.laviewusa.com/support/download.

Note: Batteries (2×AAA) must be installed before operation.

USB Mouse Operation

A regular 3-button (Left/Right/Scroll-wheel) USB mouse can also be used with this NVR. To use a USB mouse:

- 1. Plug USB mouse into one of the USB interfaces on the front panel of the NVR.
- 2. The mouse should automatically be detected. In the rare case that the mouse is not detected, the possible reason may be that the two devices are not compatible, please refer to the recommended

device list from your provider.

Chapter 2 Getting Started

Starting Up and Shutting Down the **NVR**

Before vou start:

Check that the voltage of the extra power supply is the same as the NVR's requirement, and the ground connection is working properly.

Starting up the NVR:

Steps:

- 1. Check that the power supply is plugged into an electrical outlet. It is HIGHLY recommended that an Uninterruptible Power Supply (UPS) be used in conjunction with the device.
- 2. Turn on the power switch on the rear panel.
- 3. After startup, the Power LED indicator turns on . A splash screen with the status of the HDD appears on the monitor. The row of icons at the bottom of the screen shows the HDD status. 'X' means that the HDD is not installed or cannot be detected.

Shutting down the NVR

Steps:

Enter the Shutdown menu. 1. Menu > Shutdown

c°	Configuration	×	Logout
¥	Maintenance	•	Shutdown
Ċ	Shutdown	Þ	Reboot

Shutdown Menu

- Click the Shutdown button 2.
- 3. Click the Yes button.
- 4. Turn off the power switch on the rear panel when the Prompt pops up.

Shutdown Prompt

Rebooting the NVR In the Shutdown menu, you can also reboot the

NVR. Steps:

- 1. Enter the Shutdown menu by clicking Menu > Shutdown.
- 2. Click the Logout button to lock the NVR or the **Reboot** button to reboot the NVR.

Password

The default password for the NVR is 12345. In newer firmware, you may be asked to create your own password the first time you turn on the system. Please contact our tech support if you do not remember your password.

Adding and Connecting IP Cameras

Note: ONVIF compatibility means the camera can be supported both when it uses the ONVIF protocol and its private protocols. Only ONVIF is supported means the camera can only supported

when it uses the ONVIF protocol.

Adding the Online IP Cameras

Purpose:

The main function of the NVR is to connect the network cameras and record the video captured. So before you can get live view or recorded video, you should add the network cameras to the connection list of the device.

Before you start:

Ensure that the network connection is valid and correct. For detailed checking and configuring of the network, please see Chapter Checking Network Traffic and Chapter Configuring Network Detection.

Option 1: Steps:

2.

1. Right-click the mouse when you are in live view mode to show the menu bar.

A (Auto) or (Manual). Select

Auto

The device will add the detected IP cameras or encoders automatically by using the admin user name and password.

Auto Adding IP Camera Interface

Note: If the user name and password are changed, the auto adding of IP camera may fail. you may add it manually if necessary.

Manual Steps:

- 1. To add online cameras with same network segment:
 - The detected online camera will be 1) listed in the camera list, as shown in the figure below.

Manual Adding IP Camera Interface

- Click the with button to add the 2) camera.
- To add other IP cameras: 2.
 - Click the Custom Adding button 1) to see the Add IP Camera (Custom) interface.

Manual Adding IP Camera Interface

2) You can edit the IP address, protocol. management port, and other information for the IP camera.

Manag

NC-KDO32 PRIVATE 8000

3) Click Add to add the camera.

Option 2:

Steps:

1 Enter the Camera Management interface. Menu> Camera> Camera

🕹 Export	•	Camera
🖫 Manual	•	OSD
🗳 HDD	•	Image
🕮 Record	•	PTZ
🚾 Camera	•	Motion
다 Configu	ration 🕨	Privacy Mask
😵 Mainten	ance 🕨	Video Tampering Detection
ථ Shutdov	vn 🕨	Video Loss

Menu

- 2. To add online cameras with same network segment:
 - 1) Click Search to search for online cameras.

4

Camera Settings Interface

- 2) Check the box next to cameras to be added.
- 3) Click **Quick Add** to add the camera.
- 3. To add other IP cameras:
 - On the left side of the interface, you can enter the IP address, protocol, management port, user name, password and other information for the IP camera.
 - Click Add to add the camera. *Note:* If you check the Synchronize IP Camera checkbox, the default settings of the NVR for IP cameras is applied to the added camera.

Editing the Connected IP cameras and Configuring Customized Protocols

After the IP cameras are added, the basic information of the camera will show in the page, you can configure the basic settings of the IP cameras. *Steps:*

Click the ion to edit the parameters; you can edit the IP address, protocol and other settings.

Edit the Parameters

Click **apply** to save the settings and click **OK** to exit the editing interface.

Configuring customized protocols *Purpose:*

2

To connect the network cameras which are not configured with standard protocols, you can configure customized protocols for them. *Steps:*

1. Choose the protocol type and choose the transfer protocols.

Note: The protocol type and the transfer protocols must be supported by the connected network camera.

After adding customized protocols, you can see the protocol name listed in the dropdown list.

0 L	🐺 🚅 🎬 🚰 🗠 👌 Camera

A Live View	Net Receive Idle Bandwidth: 37Mbps Back

Protocol Setting

2. Choose the protocols you just added to validate the connection of the network camera.

Editing IP Cameras connected to the PoE interfaces

The PoE interface enables the NVR system to pass electrical power and data, through Ethernet cabling to the connected network cameras.

LaView NVRs provides PoE interfaces which can connect to network cameras directly; and if you dont use the PoE interface, you can also connect to the online network cameras. The PoE interface supports the Plug-and-Play function.

Example:

For LaView NVRs, when you want to connect 1 online camera and connect 3 network cameras via PoE interfaces, you must disable 1 PoE interface in the **Edit IP camera** panel.

To add Cameras for NVR supporting PoE function:

Before you start:

Connect the network cameras using the PoE interfaces.

- Steps:
- Enter the Camera Management interface. Main menu> Camera> Camera The connected cameras are listed.

Edit IP Camera Interface

Note: Plug-and-Play means that the camera is connected to the PoE interface. The parameters of the camera can't be edited here. The IP address of the camera can only be edited in the Network Configuration interface, see *Chapter Configuring General Settings* for detailed information.

Editing IP cameras connected to the built-in switch network interfaces

In LaView NVRs, the extra network interfaces provide a built-in switch with plug-and-play function.

Example:

When you want to connect 2 online cameras and 6 network cameras via built-in switch interfaces, you must disable 2 built-in switch interfaces in the Edit **IP camera** panel.

To add Cameras for NVR via built-in switch interfaces:

Before you start:

Connect the network cameras via the built-in switch interfaces.

Steps:

1. Enter the Camera Management interface. Main menu> Camera> Camera The connected cameras should be listed.

List of Connected Cameras

Note: The cameras connected to the builtin switch interface cannot be deleted in this menu.

2. Click the **Edit** button.

Edit IP Camera Interface

Note: Plug-and-Play means that the camera is connected to the switch interface. The parameters of the camera can't be edited here. The IP address of the camera can only be edited in the Network Configuration interface.

Chapter 3 Live View

Introduction of Live View

Live view shows you the video captured by each camera in real time. The NVR automatically enters Live View mode when powered on.

Live View Icons

In the live view mode, there are icons at the top right of the screen, showing the status of each channel, so that you can see whether the channel is recording, or whether there are alarms are being triggered.

Operations in Live View Mode

In live view mode, there are many functions provided. The functions are listed below.

- Single Screen: Showing only one screen on the monitor.
- **Multi-screen:** Showing multiple screens on the monitor simultaneously.
- Auto-switch: The screen is auto switched to the next one. You must set the dwell time for each screen on the configuration menu before enabling auto-switch. Menu>Configuration>Live View>General.
- Start Recording: Normal record and motion detection record are supported.
- **Output Mode:** Select the output mode to Standard, Bright, Gentle or Vivid.
- All-day Playback: Playback the recorded videos for the selected day.

Using the Mouse in Live View

Mouse Operation in Live View *Note:* The *dwell time* of the live view configuration must be set before using **Start Auto-switch**. *Note:* Reboot Intelligence is enabled when rightclicking on a camera as long as, the corresponding camera supports intelligent function

🛧 Menu 🗆 🖽 🖽 🖽 📾 🕷 🐼 🗊 🜑 🚳 🖏

Right-click Menu

Note:

- Two ways to show the Right-click Menu Bar: right-clicking or moving the mouse to the bottom of <u>the screen</u>.
- You can click on the right side of the menu bar to clip the menu on the screen.

Quick Setting Toolbar in Live View Mode

On the screen of each channel, there is a quick setting toolbar which shows up when you single click the mouse in the one of the camera views.

Note: Live View Strategy is only available for network cameras.

🗏 🖻 🖪 🔸 🅸 🔍 🗨 🗔 🔍 T 🎍

Quick Setting Toolbar

Description of Quick Setting Toolbar Icons

Instant Playback only shows the last five minutes. If no recording is found, it means there was no recording during the last five minutes.

Digital Zoom can zoom in on a selected area Left-click and draw to select the area to zoom in.

Digital Zoom

Adjusting Live View Settings

Purpose:

Live View settings can be customized according to your needs. You can configure the output interface, dwell time for each channel, mute /volume for audio, the screen number for each channel, etc. *Steps:*

1. Enter the Live View Settings interface. Menu> Configuration> Live View

General View		
Video Output Interface	VGA/HDMI	
Live View Mode		
Dwell Time	No Switch	
Enable Audio Output		
Event Output	VGA/HDMI	
Full Screen Monitoring D	10s	۲

Live View-General

The settings available in this menu include:

- Video Output Interface: Designates the output to be used options include VGA/ HDMI.
- Live View Mode: Designates the display mode to be used for Live View.
- **Dwell Time:** The time in seconds between switching of channels when auto-switch is enabled in Live View.
- Enable Audio Output: Enables/disables audio output for the selected video output.
- Event Output: Designates the output where to show event video.
- Full Screen Monitoring Dwell Time: The time in seconds to show an event on screen.
- 2. Setting order of cameras

Live View- Camera Order

To set the camera order:

 Select the small box, and doubleclick on the camera number to display that channel on the window.

You can click button to enable live view for all the

channels and click to stop live view.

3) Click the **Apply** button to save the settings.

Chapter 4 PTZ Control

Configuring PTZ Settings

Purpose:

Follow the procedure to set the parameters for PTZ. The configuring of the PTZ parameters must be done before you can control the PTZ camera. *Steps:*

1. Enter the PTZ Settings interface. Menu >Camera> PTZ

IP Camera 1	
Default	
0	

PTZ- General

2. Choose the camera in the **Camera** dropdown list.

3. Enter the parameters of the PTZ camera. *Note:* All the parameters should be in the PTZ

camera parameters section of the camera manual. *Example:* If the PTZ camera uses the protocol of DRAGON, you should select DRAGON in the PTZ Protocol field.

4. Click Apply button to save the settings.

Setting PTZ Presets, Patrols & Patterns

Before you start:

Please make sure that the presets, patrols and patterns are be supported by PTZ protocols.

Customizing Presets

Purpose:

Follow the steps to set the Preset location, which is where you want the PTZ camera to point when an event takes place. *Steps:*

1. Enter the PTZ Control interface. Menu>Camera>PTZ>More Settings

PTZ- More Settings

Use the directional button to wheel the camera to the location that you want to as preset.
 Click the round icon next to Save Preset.

4. Click the preset number to save the preset.

Repeat the steps2-4 to save more presets. If the number of the presets you want to save is more than 17, you can click [...] and choose the available numbers.

More Presets

Calling Presets

Purpose:

This feature enables the camera to point to a specified position such as a window when a preset is needed.

Call preset in the PTZ setting interface: *Steps:*

- 1. Enter the PTZ Control interface. Menu>Camera>PTZ>More Settings
- 2. Check the round icon of Call Preset.

PTZ- Call Preset

3. Choose the preset number.

Call preset in live view mode:

Steps:

1. Press the PTZ button on the front panel or click the PTZ Control icon in the

quick setting bar to enter the PTZ setting menu in live view mode.

PTZ 🖃 🗵	PTZ	L×

- 2. Choose Camera in the list on the menu.
- 3. Double click the preset in the **Preset** list to call it. The camera will move to the saved location from the preset selected.

Chapter 5 Recording Setting

Configuring Encoding Parameters

Purpose:

By configuring the encoding parameters you can adjust image quality, through changing transmission stream type, resolution. etc.

Before you start:

Make sure that the HDD has already been installed. If not, please install a HDD and initialize it. (Menu>HDD>General)

HDD- General

Check the storage mode of the HDD:

Click **Advanced** to check the storage mode of the HDD.

If the HDD mode is *Quota*, please set the maximum record capacity and maximum picture capacity. For detailed information, see *Chapter Configuring Ouota Mode*.

If the HDD mode is **Group**, you should set the HDD group. For detailed information, see *Chapter Configuring HDD Group for Recording*.

HDD- Advanced

Steps:

Enter the Record settings interface to configure the encoding parameters: Menu>Record>Encoding

Camera	IP Camera 1		
Encoding Parameters	Main Stream(Normal)		
	Video & Audio		
	1280*720(HD720P)		
Bitrate Type	Constant		
	10fps		
	General		
	512		
Max. Bitrate Range Reco	1023~1706(Kbps)		
	5s		
	✓		

Record Encoding

Encoding Parameters for Recording

Select **Record** tab page to configure stream type, resolution, and other parameters as needed.

Pre-record: The amount of time to be recorded prior to an alarm-triggered event. For example, if you set the pre-record time as 5 seconds, when an alarm triggers recording at 10:00, the camera saves video starting at 9:59:55.

Post-record: The time you set to be recorded after the event. For example, if you set the post-record time as 5 seconds, when an alarm triggered the recording ends at 11:00, it continues recording till 11:00:05.

Expiration Time: Expired time, is the amount of time for a record file to be kept in the HDD. If the deadline is reached, the file will be deleted. You can set the expired time to 0, and then files will never be deleted. Storage time for files should be determined by the capacity of the HDD.

Redundant Record: Enabling redundant record means the recording is saved in the redundant HDD. See *Chapter Configuring Redundant Recording*. **Record Audio:** Check the checkbox to enable or disable audio recording.

Click Apply to save the settings.

Encoding Parameters Settings for Sub-stream Enter the Sub-stream tab page.

Camera	IP Camera 1

Max. Bitrate Range Reco	. 1023~1706(Kbps)	

Sub-stream Encoding

Configure the parameters of the camera. Click Apply to save the settings.

Configuring Record Schedule

Purpose:

Set the recording schedule for the camera to automatically start/stop recording according to the configured schedule. Steps: Enter the Record Schedule interface.

www.LaViewUSA.com

Menu>Record>Schedule Configure Record Schedule Select Record Schedule.

Record													
			IP C	amen	a 1								
	0			10	12	14	16	18	20	22	24	Edit	
Mon												Normal	
Tue												Event	
Wed												Motion	
Thu												Alarm	
												M & A	
Sat												POS	
Sun												None	

Record Schedule

Choose the camera you want to configure. check the checkbox next to **Enable Schedule** item. Click **Edit** button or click the icon under the edit button and click and drag the schedule desired on the panel.

Edit the schedule:

In the message box, you can choose the day to which you want to set schedule.

Start/End Time 00:0	0-00:00	Туре • Туре	Normal Normal	
Start/End Time 00:0		🕘 Туре	Normal	
	0-00-00			
	0-00.00	🕘 Туре	Normal

Draw the Schedule

Descriptions of the scheduled recording icons are shown in the figure below.

Descriptions of the scheduled recording icons

Click the **Apply** button to validate the settings. If you wish to use these settings for other channels, click **Copy**, then choose the channel to which you want to copy the settings.

Copy Schedule to Other Channels

Configuring Motion Detection Record

Purpose:

Follow these steps to set the motion detection parameters. In live view mode, when a motion detection event takes place, the NVR can analyze it and carry out a variety of actions to handle it. Enabling motion detection function can trigger certain channels to start recording, full screen monitoring, audio warning, notify the surveillance center etc.

Steps:

Enter the Motion Detection interface. Menu>Camera>Motion

Motion Detection

Configure Motion Detection: Choose camera you want to configure. Check the checkbox next to **Enable Motion Detection**.

Crop the area for motion detection by mouse. If you want to set motion detection for the area shot by the camera, click **Full Screen**. To start over, click **Clear**.

Motion Detection- Grid

Click **Setting** to select channels that will link to the motion detection trigger.

Motion Detection Settings

14

Select the channels for which you want the motion detection event to trigger recording. Click Apply to save the settings. Click **OK** to go back to menu. Exit the Motion Detection menu. For detailed information on schedule configuration, see Chapter Configuring Record Schedule.

Manual Record

Purpose:

Follow the steps to set parameters for manual recording.

Steps:

Enter the Manual settings interface. Menu> Manual Or press the **REC** button on the remote control.

Manual Record

Enabling Manual Record: Select Record on the left bar. off to 🕅 Next to the camera number, change

Disabling manual record: Next to the camera number, change to

Note: After rebooting, all manual records enabled are canceled.

Start all-day continuous recording or all-day motion detection recording of all channels: Click 🖉 for Continuous or Motion Detection

Continuous Recording

Motion Detection Recording

Click to enable all-day continuous recording or all-day motion detection recording on all channels.

Chapter 6 Playback

Playing Back Record Files

Playing Back by Channel

Purpose:

Play back the recorded video files of a specific channel in live view mode. Channel switch is supported.

OPTION 1:

Choose a channel in live view mode using the mouse

and click the button in the quick setting toolbar. Note: In instant playback mode, only files recorded during the last five minutes on this channel will be played back.

Instant Playback Interface

OPTION 2:

Enter the Playback interface. Mouse: right click a channel in live view mode and

Right-click Menu under Live View

Front Panel: press PLAY button to play back recorded files from the channel under single-screen live view mode.

When on multi-screen live view mode, the recorded files from the top-left channel will be played back. Note: During playback process, pressing the numerical buttons will switch playback to the corresponding channels.

Playback management:

The toolbar on the bottom of the Playback interface can be used to control playing progress.

Playback Interface

Click on multiple channel(s) to execute simultaneous playback.

Toolbar of Playback

Note:

2013-09-10 16:18:14 -- 2013-09-10 18:44:22

indicates the start/end time of recording. Detailed Explanation of Playback Toolbar

Note: Playback progress bar: Use the mouse to click on point in the progress bar or drag the progress bar to locate specific frames.

Playing Back by Time

Purpose:

in ai

Play back video files recorded in specified time duration. Multi-channel simultaneous playback and channel switch are supported.

Steps:

Enter playback interface. Menu>Plavback Check off channel(s) in the channel list and then double-click to select a date on the calendar.

Playback Calendar

Note:

If a camera has recordings from that day, the icon in the calendar is displayed as **10**. Otherwise it is displayed as **11**. The selected date is surrounded by a white rectangle, as in **10**. In the Playback interface:

The toolbar at the bottom of the Playback interface can be used to control playing progress.

Interface of Playback by Time

Toolbar of Playback by Time

Note: The

2013-09-10 16:18:14 -- 2013-09-10 18:4

indicates the start/end time of the recording.

Detailed Explanation of Playback-by-time Interface

Note:

Playback progress bar: Use the mouse to click on any point in the progress bar or drag the progress bar to locate specific frames.

Playing Back by Event Search

Purpose:

Play back specific files on one or several channels by restricting event type (e.g. alarm input and motion detection).

Steps: Enter the Playback interface.

Menu>Playback

Select **Event** in the drop-down list on the top-left. Select **Alarm Input** or **Motion** as the event type and set the Start time and End time.

Search Result Bar(Alarm In and Motion)

Click which button to play back the file. *Note:*

Pre-play and post-play can be configured. If the event is set to trigger recording on multiple

channels, clicking the O will activate the Synch

Playback interface. You can select which channels to play back synchronously.

Click the ${\bf Back}$ button to go back to the search interface.

Playback interface:

The toolbar at the bottom of the Playback interface can be used to control playing progress.

Toolbar of Playback by Event

Detailed Explanation of Playback-by-Event Toolbar

Note:

Playback progress bar: Use the mouse to click on any point in the progress bar or drag the progress bar to locate specific frames.

Smart Search

Purpose:

In order to locate motion detection events easily in the playback progress bar, you can analyze a certain area/scene to get all of the related motion detection events that occurred in the area.

Note: The smart search function may vary according to the camera connected to the NVR.

Before you start:

Log in the network camera using your web browser, and enable the Dynamic Analysis for Motion by checking the checkbox next to it. Enter the motion detection configuration interface:

Configuration> Advanced Configuration> Events> Motion Detection.

Motion Detection Tamper-proof Exception Email Snapshot Other Alar

Enable Motion Detection
 Enable Dynamic Analysis for Motion

Chable Dynamic Analys

Area Settings

Draw Area Clear All Sensitivity

Motion Detection Settings

Enable the motion detection function and set the arming area to full screen using the NVR's local menu.

Steps:

Enter the Playback interface and play a record file.

Interface of Playback by Time

Click on the playback toolbar to enter Smart Search mode.

Click and drag the mouse to crop an area. You can

click the button to set the whole screen as a

search area. After cropping an area, click the button to execute smart search in this area. *Note:* Multi-area searching modes are supported.

Crop of Smart Search Area

Smart search findings will be marked as in the progress bar. The hidden list of recorded files appear when mouse

is moved to the right of the playback interface.

Smart Search Findings

Note:

Playback progress bar: Use the mouse to click on any point in the progress bar or drag the progress bar to locate specific frames.

Digital Zoom

Steps:

Click the button on the playback toolbar to enter Digital Zoom interface. Use the mouse to crop an area and the cropped image will be enlarged up to 16 times.

4-ch Synchronous Playback Interface

Draw Area for Digital Zoom

Right-click the image to exit the digital zoom interface.

Reverse Playback of Multichannel

Purpose:

You can play back multi-channel recordings in reverse. 16-ch (with up to 1280*720 resolution), 4-ch (with up to 1920*1080P resolution) and 1-ch (with up to 2560*1920 resolution) reverse playback are all supported. *Steps:* Enter Playback interface. Menu>Playback Check multiple checkboxes to select multiple channels, and select a date on the calendar.

Chapter7 Backup

Backing Up Footage Files

Quick Export

Purpose:

Export record files to backup device(s) quickly. *Steps:*

 Enter Video Export interface. Menu>Export>Normal Choose the channel(s) you want to back up and click Quick Export

Note: The time duration of recordings on a specified channel cannot exceed one day. Otherwise, the message box "Max. 24 hours are allowed for quick export." will pop up.

Checkup of Quick Export Result Using USB1-1

Backing up by Video Search

Purpose:

Files can be stored to various devices, such as USB devices (USB flash drives, USB HDDs, USB writer) and DVD-R/W.

Backup using USB flash drives, USB HDDs, USB writer and DVD-R/W

- Steps: 1.
 - Enter Export interface. Menu>Export>Normal
- 2. Set search condition and click Search

Notes:

- Six different Record types are selectable: Continuous, Motion, Alarm, Motion & Alarm, Command Triggered and Manual.
- 2) Two different file types are selectable: Unlocked and Locked.

Normal Video Search for Backup

3. Select the files you want to back up. Click to play the file if you want to

check it. Check the checkbox next to the files you

want to back up. *Note:* The size of currently selected files is displayed in the lower-left corner of the window.

Result of Normal Video Search for Backup

4. Export.

Click Export and start backup. *Note:* If the inserted device is not

recognized:

- Click Refresh
- · Reconnect device.

• Check for compatibility from vendor. You can also format USB flash drives

or USB HDDs via the device. USB writer and DVD-R/W cannot be formatted.

Checkup of Export Result using USB Writer

Chapter 8 Network Settings

Configuring General Network Settings

Purpose:

Network settings must be properly configured before you operate NVR over network.

Steps:

- 1. Enter the Network Settings interface. Menu >Configuration>Network
- 2. Select the General tab.

NIC Type	10M/100M/1000M Self-adaptive
Enable DHCP	
	172 .6 .23 .8
IPv4 Subnet Mask	255 .255 .255 .0
	172 .6 .23 .1
	fe80::8ee7:48ff:fe16:f73c/64
IPv6 Default Gateway	
MAC Address	8c:e7:48:16:f7:3c
MTU(Bytes)	1500
Preferred DNS Server	10.1.7.88
Alternate DNS Server	10.1.7.77
Internal NIC IPv4 Address	192 . 168 . 254 . 1

Network Settings Interface

3. In the General Settings interface, you can configure the following settings: NIC Type, IPv4 Address, IPv4 Gateway, MTU and DNS Server.

If the DHCP server is available, you can check the checkbox next to **DHCP** to automatically obtain an IP address and other network settings from that server. *Note:* For the LV-N9808C8E series NVR, you need to configure the internal NIC address, so that IP addresses are assigned to the cameras connected to the PoE or built-in switch interfaces.

Note: The valid value range of MTU is 500 \sim 9676.

4. After configuring the general settings, click **Apply** to save the settings.

Configuring advanceed Settings

Configuring DDNS

Purpose: If your NVR is set to use PPPoE as its default

network connection, you may set Dynamic DNS (DDNS) to be used for network access. Prior registration with your ISP is required before configuring the system to use DDNS. *Steps:*

- 1. Enter the Network Settings interface. Menu >Configuration> Network
- 2. Select the DDNS tab to enter the DDNS Settings interface.

DDNS Settings Interface

- 3. Check the **DDNS** checkbox to enable this feature.
- 4. Select **DDNS Type**. Five different DDNS types are selectable: IPServer, DynDNS, PeanutHull, NO-IP and HiDDNS.

Configuring NTP Server

Purpose:

4.

A Network Time Protocol (NTP) Server can be configured on your NVR to ensure the accuracy of system date/time. *Steps:*

- 1. Enter the Network Settings interface. Menu >Configuration> Network
- 2. Select the **NTP** tab to enter the NTP Settings interface.

nable NTP	
	60
ITP Server	210.72.145.44
ITP Port	123

NTP Settings Interface

- **3.** Check the **Enable NTP** checkbox to enable this feature.
 - Configure the following NTP settings: • Interval: Time between the two synchronizing actions with NTP server. The unit of time is in minutes.
 - NTP Server: IP address of NTP server.
 - NTP Port: Port of NTP server.
- 5. Click the **Apply** button to save settings and exit the interface.

Note: The time synchronization interval can be set from 1 to 10,080 min, and the default

value is 60min. If the NVR is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the NVR is set up in a customized network, NTP software can be used to establish a NTP server used for time synchronization.

Configuring RTSP

Purpose:

The RTSP (Real Time Streaming Protocol) is a network control protocol designed for use in entertainment and communications systems to control streaming media servers.

Steps:

- 1. Enter the Network Settings menu Menu >Configuration> Network
- 2. Select the **More Settings** tab to enter the More Settings menu

Alarm Host IP	172.6.21.58
Alarm Host Port	7200
Server Port	8000
HTTP Port	
Multicast IP	239.255.235.112
RTSP Port	554
Enable HTTPS	
HTTPS Port	443
Enable High-speed Download	

RTSP Settings Interface

- 3. Enter the RTSP port in the text field next to **RTSP Service Port**. The default RTSP port is 554, and you can change it accordingly.
- 4. Click **Apply** button to save settings and exit the menu.

Configuring Server and HTTP Ports

Purpose:

You can change the server and HTTP ports in the Network Settings menu. The default server port is 8000 and the default HTTP port is 80. *Steps:*

- 1. Enter the Network Settings interface. Menu >Configuration> Network
- 2. Select the More Settings tab to enter the More Settings interface.

Alarm Host IP		
	6007	
	80	
	8554	

More Settings Interface

- 3. Enter the Server Port and HTTP Port in the text fields. The default Server Port is 8000 and the HTTP Port is 80, and you can change them according to different requirements.
- 4. Click **Apply** button to save settigns and exit the interface.

Note: The Server Port should be set to the range of 2000-65535 and is used for remote client software access. The HTTP port is used for remote IE access.

Configuring Email

Purpose:

The system can be configured to send an email notification to designated users if, an alarm motion event is detected or if the administrator password is changed.

Before configuring the email Settings, the NVR must be connected to a local area network (LAN) that maintains an SMTP mail server. The network must also be connected to either an intranet or the Internet depending on the location of the e-mail accounts to which you want to send notifications. **Steps:**

1. E

- Enter the Network Settings interface. Menu >Configuration> Network
- 2. Set the IPv4 Address, IPv4 Subnet Mask, IPv4 Gateway and the Preferred DNS Server in the Network Settings menu.
- Click the Apply button to save the settings.
 Select the Email tab to enter the Email Settings interface.

Email Settings Interface

Configure the following settings: Server Authentication (optional): Check the checkbox to enable the server authentication feature. User Name: The user account of sender's email for SMTP server authentication. Password: The password of sender's email for SMTP server: The SMTP Server IP address or host name (e.g., smtp.263xmail.com). **SMTP Port No.:** The SMTP port. The default TCP/IP port used for SMTP is 25. **Enable SSL (optional):** Click the checkbox to enable SSL if required by the SMTP server.

Sender: The name of sender.

Sender's Address: The email address of sender.

Receivers: Select the receiver. Up to 3 receivers can be configured. Receiver: The name of user to be notified. Receiver's Address: The email address of user to be notified.

Attached Pictures: Check the checkbox next to Enable Attached Picture if you want to send emails with attached alarm scene images. The interval is the time before another alarm scene image is sent. You can also set SMTP port and enable SSL here. Interval: The interval refers to the time between two alam scene pictures. E-mail Test: Sends a test message to verify that the SMTP server can be reached.

3. Click the **Apply** button to save settings.

 You can click Test button to test whether your settings work. An Attention message box will pop up. Refer to 0.

Remote Viewing

Purpose:

You can view both the live and recorded footage from your mobile devices like smart phones, tablets or laptops.

Steps:

1.Connect the NVR to your router.
2.Find out the Local IP address of the NVR in your Local Area Network (i.e.: 192.168.x.x, 10.0.x)
3.In your network router setting interface, complete the Port Forwarding of the HTTP Port (Default: 80), SERVER Port (Default: 8000) and RTSP Port (Default: 8554) for the IP address of the NVR.

Setup Wizard Add WPS Client	Ports - Custom Services					
Setup	Service Name	DVR1				
Basic Settings	Protocol	TCP/UDP -				
Wireless Settings Content Filtering	Starting Port	80 (1-65534)				
Logs	Ending Port	80 (1-65534)				
Block Sites	Server IP Address	192 168 1 6				
Block Services		1 4 4 4				
Schedule		Apply Cancel				
E-mail						
Router Status						
Attached Devices						

4.Download LaView Net / LaView Net HD from the IOS App Store or Google Play Store

5.Set up the device in the app by going to Menu > Devices > Add > Manual Adding.
See figure below for more details
6.Save the setting and click on 'Start Live View' to view the footage.

Chapter 9 HDD Management

Initializing HDDs

Purpose:

A newly installed hard disk drive (HDD) must be initialized before it can be used with your NVR. Steps:

Enter the HDD Information interface. 1. Menu > HDD> General

HDD Information Interface

- 2. Select HDD to be initialized.
- 3. Click the Init button.

Confirm Initialization

4. Click the OK button to start initialization.

L	Capacity	Status	Property	Туре	Free Space	Gr	Edit	D
5	76,319MB	Initializing 20%	RAW	Local	0MB	1	-	-

Status Changes to Formatting

5. After the HDD has been initialized, the status of the HDD will change from Uninitialized to Normal.

HDD Status Changes to Normal

Note: Initializing the HDD will erase all data on it.

Managing Network HDD

Purpose:

You can add the allocated NAS or disk of IP SAN to your NVR, and use it as a network HDD. Steps:

- 1. Enter the HDD Information interface. Menu > HDD>General
- Click the **Add** button to enter the Add 2. NetHDD interface.

HDD Information Interface

- Add the allocated NetHDD. 3.
- 4. Select the type as either NAS or IP SAN.
 - Configure the NAS or IP SAN settings.
 - Add NAS disk: 1)Enter the NetHDD IP address in the
 - text field. 2)Enter the NetHDD Directory in the
 - text field.
 - 3)Click the **OK** button to add the configured NAS disk.
 - Note: Up to 8 NAS disks can be added.

Add NAS Disk

• Add IP SAN:

- 1) Enter the NetHDD IP address in the text field.
- 2) Click the Search button to view available IP SAN disks.
- 3) Select the IP SAN disk from the list shown.
- 4) Click the **OK** button to add the selected IP SAN disk.

Note: Only 1 IP SAN disk can be added.

AddIP SAN Disk

6. After successfully adding the NAS or IP SAN disk, return to the HDD Information menu. The added NetHDD will now be displayed in the list.

Note: If the added NetHDD is uninitialized, please select it and click the Init button for initialization.

Managing HDD Group

Setting HDD Groups

Purpose:

Multiple HDDs can be managed in groups. Video from specified channels can be recorded onto a particular HDD group through HDD settings. Steps:

- 1. Enter the Storage Mode interface. Menu > HDD > Advanced
- 2. Set the **Mode** to Group.

Storage Mode									J
Mode	G	iroup							
Record on HDD Grou									
🖬 Analog	⊠ A1	🖬 A2	MA3	🖬 A4					
■IP Camera	⊠ D1	⊠ D2	∎D3	∎D4	∎D5	■D6	■D7	■D8	

Storage Mode Interface

3. Click the Apply button and the following message box will pop up;

Attention for Reboot

4. Click the Yes button to reboot the device and activate the changes.

5.

- After reboot of device, enter the HDD Information interface. Menu > HDD> General
- 6. Select HDD from the list and click the icon to enter the Local HDD Settings interface.

Local HDD Settings Interface

- 7. Select the Group number for the current HDD.
- *Note:* The default group No. for each HDD is 1.
- 8. Click the **OK** button to confirm settings.

Confirm HDD Group Settings

9. In the pop-up message box, click the Yes button to confirm the settings.

Setting HDD Property

Purpose:

The HDD property can be set to redundancy, readonly or read/write (R/W). Before setting the HDD property, please set the storage mode to Group (refer to steps 1-4 of Chapter Setting HDD Groups).

A HDD can be set to read-only to prevent important recorded files from being overwritten when the HDD becomes full in overwrite recording mode.

When the HDD property is set to redundancy, the video can be recorded both onto the redundancy

HDD and the R/W HDD simultaneously so as to ensure that reliability of video data is highly secured and realiable.

Steps:

- 1. Enter the HDD Information interface. Menu > HDD> General
- 2. Select HDD from the list and click the icon to enter the Local HDD Settings interface.

Set HDD Property

- **3.** Set the HDD property to R/W, Read-only or Redundancy.
- 4. Click the **OK** button to save settings and exit the interface.
- 5. In the HDD Information menu, the HDD property will be displayed in the list.

Note: At least 2 hard disks must be installed on your NVR (and one must be set to R/W property) if you want to set a HDD to Redundancy.

Chapter 10 Camera Settings

Configuring OSD Settings

Purpose:

You can configure the OSD (On-Screen Display) settings for the camera, including date /time, camera name, etc.

Steps:

- 1. Enter the OSD Configuration interface. Menu > Camera > OSD
- 2. Select the camera to configure OSD settings.
- **3.** Edit the Camera Name in the text field.
- 4. Configure the Display Name, Display Date and Display Week by clicking the checkbox.
- 5. Select the Date Format, Time Format and Display Mode.
- You can use the mouse to click and drag the text frame on the preview window to adjust the OSD position.
- 7. Click the **Apply** button to apply settings.

Configuring Privacy Mask

Purpose:

You can configure up to four privacy mask zones which will prevent certain areas from being viewed or recorded.

Steps:

- 1. Enter the Privacy Mask Settings interface. Menu > Camera > Privacy Mask
- 2. Select the camera to set a privacy mask on.
- 3. Check the checkbox next to Enable Privacy Mask to enable this feature.

Privacy Mask Settings Interface

4. Use the mouse to crop a zone on the window. Different zones will be marked

with different frame colors. *Note:* Up to 4 privacy masks zones can be configured and the size of each area can be adjusted.

5. The designated privacy mask zones on the window can be deleted by clicking the corresponding Clear Zone1-4 buttons on the right side of the window, or you canclick **Clear All** to clear all zones.

Set Privacy Mask Area

6. Click the Apply button to save settings.

Configuring Video Parameters

Steps:

1. Enter the Image Settings interface. Menu > Camera >Image

Image Settings Interface

- 2. Select the camera to set image parameters for.
- **3.** Click the arrows to adjust each parameter. Click the **Apply** button to save settings.

Chapter 11 Maintenance

Viewing Device Information

Steps:

- 1. Enter the System Information interface. Menu >Maintenance>System Info
- 2. Click the **Device Info** tab to see the Device Information menu where you can access the device name, model, serial No., firmware version and encoding version.

ļ	Device Info	Camera	Rec	ord	Alarm	Network	HDD
	Device Nam			xxx	xxxx	x	
	Model			xx)	(XXX	хх	
				xx>	< x x x	x x x x x x x	(XXXX

Network Information Menu

Viewing HDD Information

Steps:

- 1. Enter the System Information interface. Menu >Maintenance>System Info
- 2. Click the HDD tab to see the HDD

Information menu where you can view the HDD status, free space, property, etc.,

HDD Information Menu

Searching & Export Log Files

Purpose:

The operation, alarm, exception and other information about the NVR can be stored in log files, which can be viewed and exported at any time.

Steps:

1. Enter the Log Search interface. Menu >Maintenance>Log Search

Log Search Interface

- 2. Set the log search conditions to refine your search: Start Time, End Time, Major Type and Minor Type.
- 3. Click the **Search** button to find matching log files.
- 4. The matching log files will be displayed on the list shown below.

Export Log Files

- Select the backup device from the dropdown list under Device Name.
- Click Export to export the log files to the selected backup device. You can click the New Folder button to create a new folder in the backup device, or click the Format button to format the backup device before log export.

Notes:

- 1) Please connect the backup device to NVR before initiating log export.
- The log files exported to the backup device are named according to exporting time, e.g., 20110514124841logBack.txt.

To export all the log files:

You can enter the Log Export interface. Menu> Maintenance> Log Information> Log Export

Log Export Interface

Check the checkbox next to the HDD, and click the Export button to export all the log files stored in the HDD.

Upgrading System

Purpose:

The firmware on your NVR can be upgraded by local backup device or remote FTP server.

Upgrading by Local Backup

Device

- *Steps:* **1.** Connect your NVR with a local backup
- device where the update firmware file is located.
 Enter the Upgrade interface.
 - Enter the Upgrade interface. Menu >Maintenance>Upgrade
- 3. Click the Local Upgrade tab to enter the local upgrade menu.

Device Name USE	31-1				Refres	sh
Name	Size	Туре			Delet	Play

Local Upgrade Menu

- Select the update firmware file from the backup device.
- 5. Click the **Upgrade** button to start upgrade.
- 6. After the upgrading is complete, reboot the NVR to activate the new firmware.

Restoring Default Settings

Steps:

Default

4.

1. Enter the Default interface. Menu > Maintenance > Default

System will rebool after restoring the default settings. Continue?

Restore Factory Default

2. Click the **OK** button to restore the default settings.

Note: Besides network parameters (IP address, subnet mask, gateway, MTU, default route and server port), all other parameters of the device will be restored to factory default settings.

Chapter 12 Others

Configuring General Settings

Purpose:

Configure the output resolution, system time, and mouse pointer speed. Menu > Configuration > General interface.

Steps:

- 1. Enter the General Settings interface. Menu >Configuration> General
- 2. Select the General tab.

General DST Setting	s More Settings	
Language	English	Ŷ
	1024'768/60HZ	*
	(GMT+08:00) Beijing, Urumqi, Singapore	v
	DD-MM-YYYY	v
	10-09-2013	=
	16:43:12	٩
Mouse Pointer Speed		

General Settings Interface

3. Configure the following settings:

- Language: The default language used is *English*.
 - **Resolution:** Select the output resolution, which must be the same as the resolution of the monitor screen.
 - Time Zone: Select the time zone.
 - **Date Format:** Select the date format.
 - System Date: Select the system date.
 - System Time: Select the system time.
 - **Mouse Pointer Speed:** Set the speed of the pointer; 4 levels are configurable.
 - Enable Wizard: Enable/disable the Wizard to appear when the device starts up.
 - Enable ID Authentication: Enable/disable the use of the login password.
- 4. Click the **Apply** button to save settings.

Configuring DST Settings

Steps:

- 1. Enter the General Settings interface. Menu >Configuration>General
- 2. Select the DST Settings tab.

							_
Auto DST Adjustn	nent

	60 Min	utes					

DST Settings Interface

Check the checkbox next to the Auto DST Adjustment item or check the Enable DST checkbox, then choose the date of the DST period.

Managing User Accounts

Purpose:

The default account in the NVR is *Administrator*. The user name is *admin* and the password is *12345*. The *Administrator* has the permission to add/delete users and configure user parameters.

Adding a User

Steps:

1. Enter the User Management interface. Menu >Configuration>User

User M	anagement			
No.	User Name	Level	User's MAC Address	Pe Edit Del
1	admin	Admin	00:00:00:00:00:00	- 🗊 -

User Management Interface

2. Click the Add button to enter the Add User menu.

Add User Menu

Enter the information for a new user: 3. User Name, Password, Level and User's MAC Address.

> Level: Set the user level to Operator or Guest. Different user levels have different operating permission.

- Operator: The Operator user level has permission for Two-way Audio in Remote Configuration and all operating permission in Camera Configuration.
- Guest: The Guest user does not have permission for Two-way Audio in Remote Configuration and has local/remote playback in Camera Configuration.
- User's MAC Address: The MAC address of the remote PC which logs onto the NVR. If it is configured and enabled, it only allows the remote user with this MAC address to access the NVR.
- 4. Click the **OK** button to save settings and go back to the User Management interface. The added new user will be displayed on the list.

Added User Listed in User Management Interface

Select the user from the list and then click 5.

the 🥙 button to enter the Permission Settings interface.

Local Parameters Settings

Local Camera Management

Local Advanced Operation

Local Shutdown / Reboot

- Set the operating permissions (Local Configuration. Remote Configuration and Camera Configuration) for the user. **Local Configuration**
 - Local Log Search: Searching/viewing • logs and system information of NVR.
 - ٠ Local Parameters Settings: Configuring parameters, restoring factory default parameters and importing/exporting configuration files.
 - ٠ Local Camera Management: The adding, deleting and editing of IP cameras.
 - Local Advanced Operation: Operating ٠ HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
 - Local Shutdown Reboot: Shutting down or rebooting the NVR.

Remote Configuration

- ٠ Remote Log Search: Remotely viewing logs that are saved on the NVR.
- Remote Parameters Settings: Remotely configuring parameters, restoring factory default parameters and importing/exporting configuration files.
- Remote Camera Management: Remote adding, deleting and editing of the IP cameras.
- ٠ Remote Serial Port Control: Configuring settings for RS-232 and RS-485 ports.
- Remote Video Output Control: Remotely Sending button control signals.
- Two-Way Audio: Realizing two-way audio between the remote client and the NVR

- Remote Alarm Control: Remotely arming (notify alarm and exception message to the remote client) and controlling the alarm output.
- . Remote Advanced Operation: Remotely operating HDD (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
- Remote Shutdown/Reboot: Remotely shutting down or rebooting the NVR.

Camera Configuration

- Remote Live View: Remotely viewing live video from selected camera (s).
- ٠ Local Manual Operation: Locally starting/stopping manual recording, photo capturing and alarm output of selected camera (s).
- Remote Manual Operation: Remotely starting/stopping manual recording, photo capturing and alarm output of selected camera (s).
- Local Playback: Locally playing back ٠ recorded files from selected camera (s).
- ٠ Remote Playback: Remotely playing back recorded files from selected camera (s).
- Local PTZ Control: Locally ٠ controlling PTZ movement of selected camera (s).
- Remote PTZ Control: Remotely controlling PTZ movement of selected camera (s).
- Local Video Export: Locally exporting recorded files from selected camera (s).
- 7. Click the **OK** button to save settings and exit interface.

Note: Only the admin user account has the permission to restore factory default parameters.

Deleting a User

Steps:

- Enter the User Management interface. 1. Menu >Configuration>User
- Select the user to be deleted from the list. 2.

No.	User Name	Level	User's MAC Address	Pe	Edit	Del

User List

Click the icon to delete the selected 3. user.

Editing a User

Steps:

- Enter the User Management interface. 1. Menu >Configuration>User
- Select the user to be edited from the list. 2.
- Click the *solution* icon to enter the Edit User 3. interface.

Note: The admin user can also be edited.

	Edit User
User Name	01
Change Password	
Password	
Confirm	
Level	Operator ~
User's MAC Address	00 :00 :00 :00 :00 :00
	OK Cancel

Edit User Interface

- 4. Edit user information: User name. password, level and MAC address. Check the checkbox Change Password if you want to change the password of the current user.
- 5. Click the OK button to save settings and exit the menu.

FAQ

• No image displayed on the monitor after starting up normally.

Possible Reasons

- a) No VGA or HDMI connections.
- b) Connection cable is damaged.
- c) Input mode of the monitor is incorrect.

Steps

1. Verify the device is connected to the monitor via HDMI or VGA cable.

If not, please connect the device with the monitor and reboot.

2. Verify the connection cable is good.

If there is still no image display on the monitor after rebooting, please check if the connection cable is good, and change a cable to connect again.

3. Verify Input mode of the monitor is correct.

Please check the input mode of the monitor matches with the output mode of the device (e.g. if the output mode of NVR is HDMI output, then the input mode of monitor must be the HDMI input). And if not, please modify the input mode of monitor.

4. Check if the fault is solved by the step 1 to step 3.

If it is solved, finish the process.

If not, please contact the engineer to do the further process.

- There is an audible warning sound "Di-Di-Di-DiDi" after a new bought NVR starts up. *Possible Reasons*
 - a) No HDD is installed in the device.
 - b) The installed HDD has not been initialized.
 - c) The installed HDD is not compatible with the NVR or is broken-down.

Steps

1. Verify at least one HDD is installed in

the NVR.

1) If not, please install the compatible HDD.

Note: Please refer to the "Quick Operation Guide" for the HDD installation steps.

- If you don't want to install a HDD, select "Menu>Configuration > Exceptions", and uncheck the Audible Warning checkbox of "HDD Error".
- 2. Verify the HDD is initialized.
 - 1) Select "Menu>HDD>General".
 - If the status of the HDD is "Uninitialized", please check the checkbox of corresponding HDD and click the "Init" button.

3. Verify the HDD is detected or is in good condition.

- 1) Select "Menu>HDD>General".
- 2) If the HDD is not detected or the status is "Abnormal", please replace the dedicated HDD according to the requirement.
- 4. Check if the fault is solved by the step 1 to step 3.
 - 1) If it is solved, finish the process.
- 2) If not, please contact the engineer to do the further process.
- The status of the added IPC displays as "Disconnected" when it is connected through Private Protocol. Select "Menu>Camera>Camera>IP Camera" to get the camera status.

Possible Reasons

- a) Network failure, and the NVR and IPC lost connections.
- b) The configured parameters are incorrect when adding the IPC.
- c) Insufficient bandwidth.

Steps

1. Verify the network is connected.

- 1) Connect the NVR and PC with the RS-232 cable.
- 2) Open the Super Terminal software, and execute the ping command. Input "ping IP" (e.g. ping 172.6.22.131).

Note: Simultaneously press **Ctrl** and **C** to exit the ping command.

If there exists return information and the time value is little, the network is normal.

- 2. Verify the configuration parameters are correct.
- 1) Select "Menu>Camera>Camera>IP Camera".
- Verify the following parameters are the same with those of the connected IP devices, including IP address, protocol, management port, user name and password.
- 3. Verify the whether the bandwidth is enough.
- Select "Menu > Maintenance > Net Detect > Network Stat.".
- Check the usage of the access bandwidth, and see if the total bandwidth has reached its limit.
- 4. Check if the fault is solved by the step 1 to step 3.

If it is solved, finish the process.

If not, please contact the engineer to do the further process.

- The IPC frequently goes online and offline and the status of it displays as "Disconnected".
 Possible Reasons
 - a) The IPC and the NVR versions are not compatible.
 - b) Unstable power supply of IPC.
 - c) Unstable network between IPC and NVR.
 - d) Limited flow by the switch connected with IPC and NVR.

Steps

- 1. Verify the IPC and the NVR versions are compatible.
 - Enter the IPC Management interface "Menu > Camera > Camera>IP Camera", and view the firmware version of connected IPC.
 - 2) Enter the System Info interface "Menu>Maintenance>System Info>Device Info", and view the firmware version of NVR.
- 2. Verify power supply of IPC is stable.
 - 1) Verify the power indicator is normal.
- 2) When the IPC is offline, please try the ping command on PC to check if the PC connects with the IPC.
- 3. Verify the network between IPC and NVR is stable.
 - 1) When the IPC is offline, connect PC and NVR with the RS-232 cable.
 - Open the Super Terminal, use the ping command and keep sending large data packages to the connected IPC, and check if there exists packet loss.

Note: Simultaneously press **Ctrl** and **C** to exit the ping command.

Example: Input **ping 172.6.22.131 –l** 1472 –f.

4. Verify the switch is not flow control.

Check the brand, model of the switch connecting IPC and NVR, and contact with the manufacturer of the switch to check if it has the function of flow control. If so, please turn it down.

5. Check if the fault is solved by the step 1 to step 4.

If it is solved, finish the process.

If not, please contact the engineer to do the further process.

 No monitor connected with the NVR locally and when you manage the IPC to connect with the device by web browser remotely, of which the status displays as Connected. And then you connect the device with the monitor via VGA or HDMI interface and reboot the device, there is black screen with the mouse cursor.

Connect the NVR with the monitor before startup via VGA or HDMI interface, and manage the IPC to connect with the device locally or remotely, the status of IPC displays as Connect. And then connect the device with the CVBS, and there is black screen either.

Possible Reasons:

After connecting the IPC to the NVR, the image is output via the main spot interface by default. Steps:

- 1. Enable the output channel.
- 2. Select "Menu > Configuration > Live View > View", and select video output interface in the drop-down list and configure the window you want to view.

Notes:

- 1) The view settings can only be configured by the local operation of NVR.
- 2) Different camera orders and windowdivision modes can be set for different output interfaces separately, and digits like "D1" and "D2" stands for the channel number, and "X" means the selected window has no image output.
- 3. Check if the fault is solved by the above steps.

If it is solved, finish the process.

If not, please contact the engineer to do the further process.

- Live view stuck when video output locally. ٠ **Possible Reasons:**
 - Poor network between NVR and IPC, a) and there exists packet loss during the transmission.
 - b) The motion detection and alarm functions are enabled, and the parameters of Main Stream (Normal) and Main Stream (Event) are different. So the image looks stuck due to the image changes between different resolutions.

c) The frame rate has not reached the realtime frame rate.

Steps:

- 1. Verify the network between NVR and IPC is connected.
- 1) When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
- 2) Open the Super Terminal, and execute the command of "ping 192.168.0.0 -l 1472 -f" (the IP address may change according to the real condition), and check if there exists packet loss.

Note: Simultaneously press Ctrl and C to exit the ping command.

2. Check the parameters of Main Stream (Normal) and Main Stream (Event).

Select "Menu > Record > Parameters > Record", and set the resolution of Main Stream (Event) the same as the one of Main Stream (Normal).

3. Verify the frame rate is real-time frame rate.

Select "Menu > Record > Parameters > Record", and set the Frame rate to Full Frame.

4. Check if the fault is solved by the above steps.

If it is solved, finish the process. If not, please contact the engineer to do the further process.

Live view stuck when video output remotely via the Internet Explorer or platform software.

Possible Reasons:

- a) Poor network between NVR and IPC. and there exists packet loss during the transmission.
- b) Poor network between NVR and PC, and there exists packet loss during the transmission
- c) The performances of hardware are not good enough, including CPU, memory, etc..

Steps:

www.LaViewUSA.com

1. Verify the network between NVR and IPC is connected.

- 1) When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
- Open the Super Terminal, and execute 2) the command of "ping 192.168.0.0 -l 1472 –f° (the IP address may change according to the real condition), and check if there exists packet loss.

Note: Simultaneously press Ctrl and C to exit the ping command.

- 2. Verify the network between NVR and PC is connected.
- Open the cmd window in the Start 1) menu, or you can press "windows+R" shortcut key to open it.
- Use the ping command to send large 2) packet to the NVR, execute the command of "ping 192.168.0.0 -l 1472 -f" (the IP address may change according to the real condition), and check if there exists packet loss.

Note: Simultaneously press Ctrl and C to exit the ping command.

3. Verify the hardware of the PC is good enough.

Simultaneously press Ctrl, Alt and Delete to enter the windows task management interface. as shown in the following figure.

Windows task management interface

• Select the "Performance" tab: check

the status of the CPU and Memory.

- If the resource is not enough, please • end some unnecessary processes.
- 4. Check if the fault is solved by the above steps.

If it is solved, finish the process. If not, please contact the engineer to do the further process.

When using the NVR to get the live view audio, there is no sound or there is too much noise, or the volume is too low.

Possible Reasons:

- a) Cable between the pickup and IPC is not connected well; impedance mismatches or incompatible.
- b) The stream type is not set as "Video & Audio".
- c) The encoding standard is not supported with NVR.

Steps:

1. Verify the cable between the pickup and IPC is connected well; impedance matches and compatible.

Log in the IPC directly, and turn the audio on, check if the sound is normal. If not, please contact the manufacturer of the IPC.

2. Verify the setting parameters are correct.

Select "Menu > Record > Parameters > Record", and set the Stream Type as "Audio & Video".

3. Verify the audio encoding standard of the IPC is supported by the NVR.

NVR supports G722.1 and G711 standards, and if the encoding parameter of the input audio is not one of the previous two standards, you can log in the IPC to configure it to the supported standard.

4. Check if the fault is solved by the above steps.

If it is solved, finish the process. If not, please contact the engineer to do the further process.

The image gets stuck when NVR is playing back by single or multi-channel.

Possible Reasons:

a) Poor network between NVR and IPC, and there exists packet loss during the

transmission.

- b) The motion detection and alarm functions are enabled, and the parameters of Main Stream (Normal) and Main Stream (Event) are different. So the image looks stuck due to the image changes between different resolutions.
- c) The frame rate is not the real-time frame rate.
- d) The NVR supports up to 16-channel synchronize playback at the resolution of 4CIF, if you want a 16-channel synchronize playback at the resolution of 720p, the frame extracting may occur, which leads to a slight stuck.

Steps:

- 1. Verify the network between NVR and IPC is connected.
- When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
- Open the Super Terminal, and execute the command of "ping 192.168.0.0 -l 1472 -f" (the IP address may change according to the real condition), and check if there exists packet loss.

Note: Simultaneously press the **Ctrl** and **C** to exit the ping command.

2. Check the parameters of Main Stream (Normal) and Main Stream (Event).

Select "Menu > Record > Parameters > Record", and set the resolution of Main Stream (Event) the same as the one of Main Stream (Normal).

3. Verify the frame rate is real-time frame rate.

Select "Menu > Record > Parameters > Record", and set the Frame Rate to "Full Frame".

4. Verify the hardware can afford the playback.

Reduce the channel number of playback.

Select "Menu > Record > Encoding > Record", and set the resolution and bitrate to a lower level. 5. Reduce the number of local playback channel.

Select "Menu > Playback", and uncheck the checkbox of unnecessary channels.

- 6. Check if the fault is solved by the above steps.
 - If it is solved, finish the process.

If not, please contact the engineer to do the further process.

• No record file found in the NVR local HDD, and prompt "No record file found".

Possible Reasons:

- a) The time setting of system is incorrect.
- b) The search condition is incorrect.
- c) The HDD is error or not detected.

Steps:

1. Verify the system time setting is correct.

Select "Menu > Configuration > General > General", and verify the "Device Time" is correct.

2. Verify the search condition is correct.

Select "Playback", and verify the channel and time are correct.

3. Verify the HDD status is normal.

Select "Menu > HDD > General" to view the HDD status, and verify the HDD is detected and can be read and written normally.

4. Check if the fault is solved by the above steps.

If it is solved, finish the process.

If not, please contact the engineer to do the further process.
