

Did you know that the **MSystem** Components work together to reduce air and water infiltration

The MSystem is a radical departure from door components offered by most distributors. From extensive product testing and experience with door components, MMI has discovered what it takes to offer the best door components currently available. With The MSystem, you get components designed and constructed to work together.

The System & Components

(A) Frame

(B) High Dam Sill
Dams provide a positive barrier to wind driven air and water.

(C) Threshold Cap (Composite)
Narrow threshold caps allow better weatherstrip positioning outside of the dam, creating a better seal.

(D) Door Bottom Design
Fin Seals provide more contact with the threshold and hold up better against air pressure, wear and tear.

(E) Corner Pad (Continuous Seal)
There is a gap in every door due to the thickness of the hinge. Corner pads prevent air and water from infiltrating this gap.

(F) Weatherstrip (Compression)
Only Msystem offers the resilience, durability and consistent compression for lasting performance.

(G) Mull Systems
We build the components of our continuous sill systems to work together with the highest precision.

(H) Flip Lever Astragal
The ultimate protection from water and weather damage plus the best security by simply flipping a handle.

One piece mulls feature superior strength, a perfect fit and no additional trim required

Continuous headers with non-invasive routing provide exceptional strength

Continuous sills provide more strength and continuous seal across the door unit

Our mull systems include inactive seats engineered for perfect panel placement

Patio & Double Doors

Easy to use flush bolt locks

Limited Lifetime Warranty when upgrading to composite or FrameSaver Frames.

The Energy Star® Program identifies Milliken Millwork, Inc. as a partner that builds energy efficient products per their guidelines. This reduces the use of fossil fuels and lowers emissions of harmful greenhouse gases into our environment.

Milliken Millwork, Inc. is proud to be an Energy Star Partner®.
