

USE & CARE MANUAL

MUSKOGEE CRAPE MYRTLE

(*Lagerstroemia Indica*)

PLANTING GUIDE:

STEP 1) First, decide on a planting location. Consider carefully what kind of sun, soil, and growing-space your tree or shrub will need.

STEP 2) Once you've located the perfect spot, the hole you are digging must be at least double the width and as deep as the root system you are planting.

STEP 3) The top of the root system should be level with the ground. Before placing the tree or shrub in the hole, use your hands to gently break up the root system.

STEP 4) Once the tree is in place, backfill the hole with native soil and any leftover potting material.

STEP 5) Pack down the soil to eliminate any air pockets.

STEP 6) When finished, water thoroughly.

PLANTING CARE:

To help crape myrtles retain water, mulch with organic matter 2-3 inches deep, making sure to keep mulch a few inches away from the trunk. Water regularly until established. Remove dead branches any time and prune weak branches back in the spring in order to encourage a strong and productive tree.
