

# Hortonova Trellis Net Installation Guide

## Horizontal Installation

1. Install posts with pre-drilled holes for each layer of net required during the growth cycle slightly further apart than the width of your Tenax Hortonova Trellis Net.
2. Attach a wooden crossbar between the posts at the first level.
3. Secure the net to the post with nylon string.
4. Run a cable along the edge of the netting and vertical support posts for added support.
5. Add additional layers of Hortonova Trellis Net as the growth cycle progresses.

## Vertical Installation

1. Set supporting posts 25 feet apart and stretch a cable from the top of one post to the other.
2. Secure the net to the initial post with a nylon string.
3. Attach netting along the cable by running the nylon string through the top meshes.
