Installation

1. For non-modular conversions, remove all connections down to the main wire and remove 1/2 of the foam insulation from the color wire leads.

2. Gently pry the cover off at the notches on the side with a small screwdriver.

3. Loosen the screws (1) on the block and connect each of the color-coded wires to the corresponding color wire terminal on the block. See the Pin Connections table below. Retighten the screws (1) to secure the wire connections together.

4. Secure the wiring block to the wall receptacle using screws (AA) or foam tape (not included). Then snap the jack cover back into place over the wiring block.

---

**NOTE:** Most networks use the T-568-B Standard.
