Installing the refrigerator

- Before installing your new fridge, read all safety instructions in this manual, then follow the instructions below.
- Place the fridge on the sturdy, level floor for quieter operation. Ensure that the floor is strong enough to support the fridge when it is fully loaded.
- If the refrigerator is to be placed on carpet, support it with a wooden board underneath. Be aware that placing the refrigerator on carpet may mean that heat from the compressor may cause the carpet to fade.
- Avoid areas where the appliance would be exposed to direct sunlight, sources of heat (stove, heater, radiator, etc.), extreme cold ambient temperatures or excessive moisture and high humidity. Installing it in the coolest area of the room will save energy consumption and running cost.
- The appliance must be installed level to work properly. The appliance is designed to be freestanding only and should not be recessed or built in.
- Allow at least 100mm clear space at the back of the refrigerator the back of the evaporator.
- The metal rails on the bottom of this refrigerator may have sharp edges, so always unpack and handle with care. Do not drag the unit: place it carefully in position to avoid scratching the floor.
- The surface of the evaporator ices up when the Refrigerator is working. This is an entirely normal part of operation. If the frost layer is more than 3mm/1/8" thick, the Refrigerator must be defrosted and cleaned to avoid unnecessary energy consumption and inefficient operation.
- The internal temperature varies in different parts of the refrigerator the back of the refrigerators is coldest. Please keep the cans/bottles away from rear wall to avoid freezing the bottles and to allow the circulation of cold air.

**WARNING!**

- Handle with care! Do not apply force to any part such as the condenser or door. The metal rails on the bottom of this refrigerator may have sharp edges, so always unpack and handle with care. Do not drag the unit: place it carefully in position to avoid scratching the floor.

**Space requirements**

- Place the unit so there is enough space for the door to open.
- Ensure that air can circulate freely around the back of the cabinet, which is necessary to cool the compressor and condenser. Allow at least 100mm clear space at the back and 50mm at the sides of the unit.

**Defrosting**

The surface of the evaporator ices up when the Refrigerator is working. This is an entirely normal part of operation. If the frost layer is more than 3mm/1/8" thick, the Refrigerator must be defrosted and cleaned to avoid unnecessary energy consumption and inefficient operation.

- Remove all items inside and unplug the Refrigerator.
- After defrosting, clean the refrigerator and allow it to dry.
- Reconnect to the mains supply to run the refrigerator.

**Replacing the Bulb**

If the bulb is suddenly faulty, contact an authorized professional, do not service by yourself.

**Mechanical Controller**

The mechanical thermostat temperature control and the LIIGHT on/off switch is located at below places:

**Setting the Temperature Control:**

- To start the refrigerator, turn the temperature control to the position corresponding to the desired cooling. The temperature of the refrigerator is controlled by adjusting/setting the thermostat control knob, located on the top in the cabinet.
- The settings 0(OFF) - 7(MAX) regulate the interior temperature of the refrigerator.
  - Setting 0(OFF) = not operating (Please press the knob and turn to get the “0” position)
  - Setting 1(MIN) = lowest setting (warmest internal temperature)
  - Setting 7(MA X) = Highest setting (Coldest internal temperature)

**NOTE:**

- The refrigerator temperature will vary depending on the quantity of cans/bottles stored and on the frequency with which the door is opened. The internal temperature varies in different parts of the refrigerator the back of the refrigerators is coldest. Please keep the cans/bottles away from rear wall to avoid freezing the bottles and to allow the circulation of cold air.

**NOTE:**

- Thermostat 0(OFF) position indicates the refrigerator is turned off although power is still being supplied. By turning the thermostat dial to the left, the refrigerator will turn on automatically. When the refrigerator is not to be used for an extended period, disconnect the plug and leave the door partially open.
