

2x4 basics

Just Add Lumber™

2x4 Basics offers kits for various types of furniture, all you need to add is lumber (not included). Assembly is incredibly easy, thanks to the included, easy-to-follow instructions and cut lists. All you need is a powered screwdriver and a saw--no other tools are necessary. For added convenience, only straight, 90-degree cuts are required--no miters or angles--and all the hardware you'll need is included in the kits.

Outdoor Furniture

2x4 Basics offers a wide variety of easy to build outdoor furniture. All you need is a few basic tools and lumber (not included). You can make pieces of furniture like the Flip Top BenchTable, chairs, benches, picnic tables, and standard tables. All of the furniture is designed to match, so you can create functional and attractive outdoor furniture groupings. You can also stain, paint, or finish the wood to fit your style and application.

Garage & Storage

2x4 Basics offers a complete set of Garage & Storage items. Build items like sawhorses, shelves, firewood racks, and a variety of different workbenches. You are no longer limited to a "standard size" workbench. Make a unit as small as 2 feet by 2 feet to use as a power tool stand, or make the largest workbench available on the market.

Dekmate

Using 2x4basics® Bench Brackets for Decks, make a short bench on one side of your deck or use as a railing with integrated seating around the entire perimeter. Just add 2x4's® and 2x6's. Simple assembly using basic tools. You can integrate benches into a deck design with much less measuring, cutting, and fitting than making them from scratch. ACQ treated lumber resistant hardware is included.
