Signature of Preparer (optional)

Section II - Hazardous Ingredients/Identity Information

| Hazardous Components (Specific Chem | nical Identity, Common Names) | (contents, %/wt) | CAS No. | |
|-------------------------------------|-------------------------------|------------------|-----------|--|
| Manganese Dioxide | (MnO ₂) | 35.26% | 1313-13-9 | |
| Zinc | (Zn) | 15.56% | 7440-66-6 | |
| Potassium Hydroxide | (KOH) | 6.25% | 1310-58-3 | |
| Graphite | (C) | 2.43% | 7782-42-5 | |
| Cadmium | (Cd) | $\leq 0.0005\%$ | 7440-43-9 | |
| Mercury | (Hg) | $\leq 0.0001\%$ | 7439-97-6 | |
| Lead | (Pb) | $\leq 0.001\%$ | 7439-92-1 | |
| | | | | |

Section III – Physical/Chemical Characteristics

| Boiling Point KOH aqua solution = 140 °C | Specific Gravity ($H_2O=1$) MnO ₂ = 4.4, Zn = 7.1, KOH = 2.0 | |
|---|---|--|
| Vapor Pressure (mmHg) KOH aqua solution = 3mmHg at 20 °C | Melting Point MnO ₂ decompose at 535° C Zn = 420 °C, KOH aqua = -35° C | |
| Vapor Density (Air = 1) | Evaporation Rate (Butyl Acetate = 1) | |

Solubility in Water KOH - complete

Appearance and Color

MnO₂ is a black powder, Graphite is also a black powder, Zinc is a silver metal. KOH aqua is a colorless liquid with stimulative order.

Section IV – Fire and Explosion Hazard Data

| Flash Point (Method Used) | Flammable Limits | LEL | UEL | |
|--|------------------|-----|-----|--|
| Incombustible | Not Available | | | |
| Extinguishing Media: See Special Fire Fighting Procedure | | | | |

Special Fire Fighting Procedure: In case of fire in an adjacent area, use water, CO₂ or dry chemical extinguishers if cells are packed in their original containers since the fuel of the fire is basically paper products. For bulk quantities of unpackaged cells use LITH-X (Graphite Base). In this case, do not use water.

As with any fire, wear self-contained breathing apparatus to avoid inhalation of hazardous decomposition products.

Unusual Fire and Explosion Hazards

Section XVI – Transportation Information

Golden Power batteries are considered to be "dry cell" batteries and are not regulated for purposes of transportation with reference to requirements of

- 1. U.S. Department of Transportation (DOT), Special Provision 130, i.e. "Batteries, dry are not subject to the requirements of this subchapter only when they are offered for transportation in a manner that prevents the dangerous evolution of heat (for example, by the effective insulation of exposed terminals)".
- 2. International Civil Aviation Administration (ICAO) and International Air Transport Association (IATA), Special Provision A123, i.e. "An electrical battery or battery powered device having the potential of dangerous evolutions of heat that is not prepared so as to prevent a short-circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or in the case of equipment, by disconnection of the battery and protection of exposed terminals) is forbidden from transportation."
- 3. International Maritime Dangerous Goods Regulations (IMDG), Special Provision 304, i.e. "Batteries, dry, containing corrosive electrolyte which will not flow out of the battery case is cracked are not subject to the provisions of this Code provided the batteries are securely packed and protected against short-circuits.

Examples of such batteries include alkali-manganese, silver oxide, zinc carbon, nickel metal hydride and nickel-cadmium batteries.
