

Granite Square Fire Pit Kit Installation Instructions

Step 1: Level the pad. Level an area of gravel or rock on compacted soil that is approximately 40" X 40" for the 21" Square Fire Pit Kit or 49" X 49" for the 30" Fire Pit Kit. The leveling pad will be approximately 6" larger than the fire pit kit.

Step 2: Install first course of block. Start at a corner and lay out the blocks going in both directions to form a square. The 21" fire pit kit will have 12 blocks per course, the 30" fire pit kit will have 16 blocks per course. If needed, use a framers square at the corners to set the fire pit square. Level the blocks from front to back and side to side. Blocks may need to be shifted slightly in order to get a tight fit between all the blocks on the first course.

Step 3: Install second course of blocks. Place a block on top of the bottom corner block staggering the intersection of two blocks on the course below. Continue around the fire pit making slight adjustments as needed so that the edge of the blocks fit together. When the 2nd course is in place, remove the blocks one at a time and adhere each block to the blocks below using quarter sized dabs of a quality construction adhesive.

Step 4: Install the remaining 7 rows. Place the blocks in the same manner as Step 2 for each row staggering the joints of the blocks below. After making any adjustments to each row, remove one block at a time and glue to the two blocks below using a quarter sized dabs of construction adhesive. Installation is complete – Enjoy!

Important Product Information

The granite blocks are natural aggregates so color variation is normal. Keep the fire inside of the fire pit as the granite can become hot to the touch. For more information, contact us at www.naturalconcreteproducts.com.
