

Kidde is pleased to introduce its Mold detection kit.
Molds are microscopic fungi that exist almost everywhere.

Mold Detection Kit

Description

Molds feed off organic materials and facilitate the decomposition of these for use by other plants and animals. To thrive mold only requires moisture and a food source.

Molds act as irritants and can produce such symptoms as sneezing, watery eyes, skin rash, respiratory distress, infections of the lungs and other afflictions.

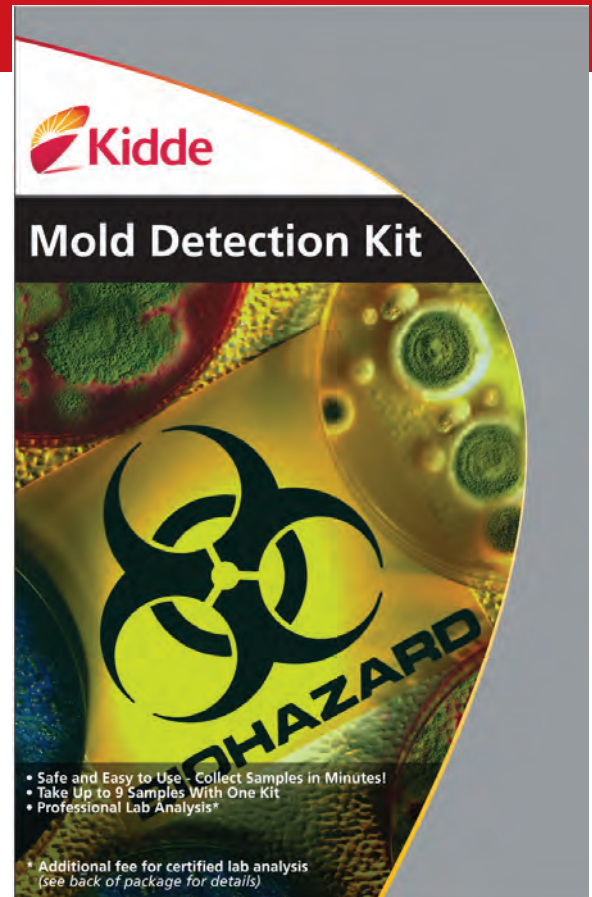

Follow the simple testing instructions and enclose the testing samples in the self-addressed envelope. The instructions guide the user through the process of mold sample collection. The cost of the kit does not include the laboratory analysis fee. The fee for each location sample test strip and/or bulk sample is \$10. A detailed report will be sent to you within 72 hours of receipt of the test and the laboratory fee.

The report includes the information on:

- Lab ID
- Report Date

For each location a sample was submitted: molds found and debris rating (% occurrence non mold spores).

Mold Glossary - describes the most common types of mold.
