

Thank you for ordering our **BLOOMAKER** Amaryllis bulb!

Plant the bulb up to its neck in the potting compost, being careful not to damage the roots. Press the soil down firmly to set the bulb securely in place after planting.

Plant the bulb, or place the potted bulb in a warm place with direct light since heat is necessary for the development of the stems. The ideal temperature is 68 to 70 degrees F. Water sparingly until the stem appears, then, as the bud and leaves appear, gradually water more. At this point, the stem will grow rapidly and flowers will develop after it has reached full growth.

After the amaryllis has stopped flowering, it can be made to flower again. Cut the old flowers from the stem after flowering, and when the stem starts to sag, cut it back to the top of the bulb.
