

Poultry Hex Netting

The BOEN Poultry Netting is used to confine poultry, rabbits and other small animals. It can also be used for plant protection from critters. Our plastic Poultry Netting is a safe and useful alternative to metal chicken wire. Lightweight, flexible plastic mesh, that can easily be trimmed to the desired size needed for your area. Condensation and urine will not cause the netting to rust or rot. It will also not deform or stretch, like thin metal mesh would. Easy to assemble with T-Posts or U-Posts and easy to disassemble and transport or put away from season to season.

- Lightweight Plastic Mesh, HDPE
