

## Description:

CO2 is essential to photosynthesis and is often the most overlooked element limiting plant growth.

Plants can use up to five times more CO2 than naturally occurs in air.

Fertilizing the air with CO2 can shorten growing time and double your harvest.

Hydro Crunch CO2 Regulator will allow you to maintain ideal CO2 levels for optimal growth and helps you speed up your plant growth rate.

## WARNING:

1. CO2 Regulators need to be used with a timer. Depending on your needs, a digital wall timer, repeat cycle timer, or CO2 Monitor Unit should be purchased. The timer activates the CO2 Regulator at specified intervals that are optimal for the growing environment.

2. CO2 Regulators attach to the CO2 tank - be sure to place the CO2 tank on a flat surface and secure it to a wall or solid frame to insure it does not fall over. CO2 tanks are under extreme pressure and could cause bodily harm if damaged.

3. Be sure to turn the CO2 tank valve to "OFF" when attaching or detaching the CO2 regulator.

4. Do not exceed 2500 PPM, high levels can be harmful to people and animals.

## Parameters:

Flowmeter: 0-15 scfh

Inlet connection: cga-320

Plastic Tubing: 5 Meters

Hose tail: suit for 4.2 mm inside diameter hose

Solenoid valve

1.58" high pressure gauge

Volts: 110 Volts

US standard plug
