

# SPEAKMAN COMPANY

## Rainier Collection Combination Series SM-8000-P

### DESCRIPTION

Speakman Rainier Collection Combination Series unites the best products included in our Rainier Series. The combination begins with our anti-scald balanced pressure valve with integral stops, featuring a brass body and adjustable temperature limit stop. The wall plate and handle are designed with definitive Rainier Collection styling. Piston type pressure balancing/ceramic regulating cartridge assembly with built-in check valves. Meets ASME A112.18.1 / CSA B125.1 & ASSE 1016 standards

### SPECIFICATIONS

SM-8000-P Anti-Scald Balanced Pressure Valve:

Connections: 1/2" female copper sweat inlets & shower outlet; 1/2" NPT female tub outlet

Flow Rate: For use with showerheads rated at 2.0 GPM (7.6 LPM) or higher.

### INSTRUCTIONS

See individual products for installation of the components and warranty information.

### ROUGH-IN

NOTE: FOR ADA MOUNTING LOCATIONS CONSULT ADAAG,  
ANSI A117.1 OR STATE REGULATIONS.

## Instructions for Models:

### CPV-P-IS

## What You Need To Know:

### Tools:

#### Required:

\*Phillips  
Screwdriver

\*Pencil

\*Adjustable  
Wrench

\*Solder Kit

\*Tubing Cutter

#### Helpful:

\* Tape Measure

\*Level

\*Keyhole  
Saw

\*Socket  
Wrench

\*9/16" Deep  
Well Socket

\*Flat Tip  
Screwdriver

\*Eye Protection

## What You Need To Know:

### Important Notes:

Be sure to read instructions thoroughly before beginning installation.

Be sure to have properly adjusted the Temperature Limiting Stop (TLS) as outlined in this Instruction Manual.

Inspect all connections after installation of valve.

This valve has an operating range of 20-80 psi.

### Safety Tips:

Follow proper safety precautions recommended by tool manufacturers.

Wear proper eye protection.

Protect surrounding area while soldering.

### Maintenance:

Your new shower/bath valve is washerless and requires no routine maintenance.

This valve incorporates a cartridge using a piston style balancing module, combined with a ceramic regulating module. This method eliminates seat washers and other packing materials.

If service is required, please follow the instructions included within the appropriate repair part grouping.

- 1 Referencing the supplied rough-in dimensions (located on last page), determine the preferred location of valve. Align the supplied rough-in template with this location and trace outline of template onto wall. Using a keyhole saw or similar tool, cut along line and remove this section of wall.

- 2 To prevent damage while soldering, remove the integral stops (IS) using a socket wrench equipped with a 9/16" deep well socket.

- 3 Following the rough-in dimensions (located on last page) as well as the markings on the supplied rough-in template, install valve at proper depth. The distance from the inlet/outlet ports of the valve assembly to the finished wall MUST be between 2-1/2" - 3-1/2".

- 4** Plumb and solder all joints and fittings to valve. Take care to protect surrounding area when soldering.

- 5** Reinstall integral stops removed in STEP 2.

- 6** Plumb and solder all fittings required for accessories. If performing a standard installation proceed to STEP 11. If performing a back to back installation, proceed to STEP 7.

- 7** **BACK TO BACK INSTALLATION**

If a back to back installation is used, the balancing / regulating cartridge must be removed and rotated 180 degrees. **DO NOT** remove blue cover from cartridge.

STANDARD INSTALLATION:  
HOT INLET ON LEFT SIDE

BACK TO BACK INSTALLATION:  
HOT INLET ON RIGHT SIDE

- 8** **BACK TO BACK INSTALLATION**

To adapt your shower valve for back to back installation, remove spindle O-ring, TLS plate, and four (4) bonnet screws. Then remove bonnet and cartridge assembly from valve body.

- 9** **BACK TO BACK INSTALLATION**

Rotate cartridge 180 degrees, and reinstall into valve body. The "H" marking on the blue cover should now be on the right hand side.

- 10** **BACK TO BACK INSTALLATION**

Reinstall bonnet and four (4) bonnet screws, making sure bonnet O-ring is in place within valve body.

- 11** Turn on water supply and check all solder connections for leaks.

- 12** To limit the maximum hot water temperature the valve delivers, adjust the valve's temperature limit stop (TLS) plate.

- 1 Slip the retaining O-ring and the TLS plate towards the end of the spindle.
- 2 Rotate the valve spindle clockwise to the maximum desired hot water temperature.
- 3 Position the TLS plate so it contacts the lug on the valve bonnet and therefore restricts the clockwise rotation of the spindle.
- 4 Slip the retaining O-ring back into the groove of the spindle to hold the TLS plate in place.
- 5 Rotate the spindle counter clockwise to the "Off" position.

- 13** Install rough-in template over valve to protect valve during final wall preparation.

# REPAIR PARTS

- ① RPG05-0718  
4 SCREWS, BONNET, & BONNET O-RING
- ② RPG05-0884  
CARTRIDGE
- ③ RPG49-0005  
CARTRIDGE LOWER QUAD RINGS
- ④ RPG49-0126  
BONNET O-RING
- ⑤ RPG49-0076  
SPINDLE O-RINGS
