

## Care and Cleaning

Natures Composites remains committed to delivering a low maintenance product to its customers. However, the location of your product means that dirt, scratches, oil and grease spills, mold and mildew can build up over time. Below are several recommended solutions to care for your product.

### Dirt (including rust and grime)

Clean product using hot water, a soft brush and a mild detergent. Deck brighteners and cleaners can be used if hot water is not enough.

*\*Use of some cleaners can lighten or change the surface appearance of your product. Always test by applying in an inconspicuous area on the product to determine what effects it will have on the product or contact us for a list of recommended products.*

### Scratches

A scratch or scuff will fade over time (approximately 10 – 15 weeks). **Never sand product as it will change the surface appearance of the product.**

### Oil & Grease Stains

Rinse with hot water immediately.

### Mold and Mildew

Spring and fall cleaning of your product prevents the buildup of mold and mildew. Clean your product using the above recommendations for removing dirt.

### Pressure Washers

Use of a pressure washer to clean your product is **not recommended**. Use of high pressure spray and in close proximity with Natures Composites products can damage the surfaces and void the warranty.

### Disposal

Natures Composites' products can be disposed with normal construction and household waste in accordance with local regulations. **Never burn Natures Composites products.**
