## FREQUENTLY ASKED QUESTIONS

### **What is SB-969?**

In response to the 2017 wildfires that left people trapped in their garages with no power to the garage door openers, California passed SB-969, requiring all residential garage door openers sold or installed in the state on or after July 1, 2019, to be equipped with battery backup.

### **When replacing my existing garage door opener, will I be required to purchase a battery backup garage door opener?**

Yes. Beginning on July 1, 2019, the only available garage door openers in California will be battery backup garage door openers.

### **Are there any other restrictions that would require me to purchase a battery backup garage door opener?**

If you are replacing your garage door, you must replace your garage door opener with a battery backup garage door opener.

### **How will I know if a Chamberlain® garage door opener has battery backup?**

All products on shelves after July 1, 2019, are required by law to have battery backup. Prior to this date, the carton packaging will identify whether the product has battery backup functionality. You also can refer to Chamberlain.com or retailer websites for product specifications.

### **What is the life expectancy of a Chamberlain Battery Backup system?**

With normal usage, a battery will last approximately 1-2 years.

### **Is there a penalty for selling or installing a non-battery-backup garage door opener after July 1, 2019, in the state of California?**

Yes, \$1,000 per opener. Enforcement actions can be brought by either consumers or government officials.

### **Can I purchase a garage door opener from another state and install it in California?**

No. Chamberlain will not offer any product support for garage door openers installed in California that were manufactured after July 1, 2019, and do not include a battery.
