

Woodguard Post Bevel Cap Installation

Congratulations on purchasing the finest exterior pre-finished lumber on the market today. Woodguard will last many years to come with very low maintenance and structural durability engineered to be trouble free.

To install your Bevel Cap, after you have cut your Post to the proper length, simply put the cap onto the end of the Post and use the included #10x3 Square Drive Color Match Screw to install your post cap to the post. Do not let the screw indent into the cap by applying too much pressure.
