

## Nulmage Aluminum Product Care Information

---

***Nulmage aluminum awnings are designed for exposure to the outdoor elements.*** They can provide many years of service while still looking good on your home. Aluminum awnings require very little maintenance, however they will begin to show their age over time if you do not care for them with periodic cleaning.

### **CLEANING**

If your aluminum awning is only moderately dirty, spray it down with a hose and use a soft-bristled brush for basic cleaning. For stubborn dirt use a mild detergent mixed with water.

The most important factor in aluminum awning maintenance involves keeping it clean. So if you use the above tips to remove dirt, your aluminum awning should look great for many years.

### **SNOW & ICE**

Your awning is designed to handle adverse weather conditions. However it is very important that you regularly clean snow or ice from your awning. We recommend that your awning be cleaned off after each snow storm. Letting ice and snow build up on your awning can cause damage to yourself or your home that is not covered by your product warranty.
