

PROSOACOUSTIC

WAVE Panel Installation Guide

Included items per panel:
2x - Z Clips
2x - 8/24 machine screws

Screw the Z-Clip to the panel using the included machine screws.

NOTE: If you ordered additional Z-Clips for the bottom of the panel for added security, repeat the process for the additional Z-Clip set.

Next, attach the brackets to the wall using appropriate anchors. The part of the clip that lays flat against the wall should be on the bottom. Drywall anchors may be used if the total working load limit meets the panel weight requirements. Where possible, anchor to a stud or other internal wall structure.

When all of the clips are installed, position the panel against the wall with the panel clips slightly higher than the wall clips and slide the panel down until the clips are secure.

**For added security a dab of RTV adhesive in the clip track before mounting the panel can be used on the clips to keep them from sliding laterally.*
