

## Applications

**RollFloors** are designed to use on flat surfaces as a more comfortable coverage for concrete, ceramic tiles, grass, old decks, sand, boardwalks, even carpets and wooden floors.

The applications of **RollFloors** are unlimited: wooden mats in bathrooms and around pool areas, to cover concrete floors in basements, put on balconies, porches, cover old decks, create pathways in your garden, bring with you to recreation activity and RV, etc. - use them as permanent or temporary solution in any area of your life.

**Don't use** on bumpy surfaces, like ground, pebble, loose sand, or anyway when you feel that the weight will exceed the strength of wooden planks. **RollFloors** are not suitable for structural applications.

As **RollFloors** are not sliding on surfaces, put together several units to create a length and width for your needs.

## Maintenance

**RollFloors** are factory finished with eco-friendly oil to protect wood against fast fading under sunlight. The thermo-treated wood used to make **RollFloors** is already naturally protected against decay. To maintain the original color and appearance of the product avoid usage of product under direct sunlight and apply finish oil at least once a year. Use any outdoor decking oil with UV protection. If color turned to silver-brown and you wish to restore the original brown color of the wood, just slightly sand the surface of battens. Fading of color is not changing the properties of the product.

## Warranty

**RollFloors** are made from thermo-treated hardwood, which is naturally protected against rot and decay, nevertheless the original appearance of the product depends on timely maintenance and usage as directed. If you find any manufacturing defect please contact us immediately at our website [www.RollFloors.com](http://www.RollFloors.com). We hope you'll enjoy the product for a long time.

# RollFloor

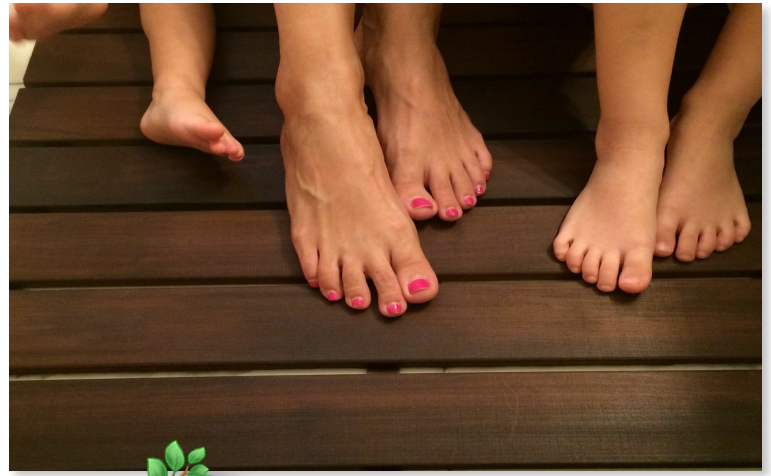

*Pamper your feet...*

[www.RollFloors.com](http://www.RollFloors.com)

**RollFloor** is a simple and effective solution to cover uncomfortable areas of our life with eco-friendly floors. The product is made in the USA with outdoor rated and environmentally safe thermo-treated American hardwoods protected against decay for 25 years.

**RollFloor** is a flexible eco-friendly wooden product - we do not use any chemicals to protect the wood fiber - it becomes naturally protected by proprietary high-temperature treatment in special chambers. To fasten thermo-treated wooden planks together we use ecologically friendly EPDM backing material, which is weather durable, and non-sliding on ceramic, cement or wooden floors. Also this will not leave marks on surfaces and, if needed, is easy to cut to specific length. Our **RollFloors** are approx. 3' long, 2' wide and ½" thick and can be placed together to make a desirable length and width.

RollFloors are made from thermo-treated American hardwoods to use indoors and outdoors. It is a 100% "Green" product.
