

One All 8 Cup Glass Stovetop Percolator

Instructions for Use:

Place the desired amount of water in the pot and measure a corresponding amount of coarsely ground coffee into the basket. Cover the basket with the basket lid. Make sure top lid opening is aligned with the glass pour spout to allow for ventilation. It is also important that the water level is below the bottom of the basket.

Electric (Coil) Stoves: The enclosed protective metal trivet must be used with coil type electric stoves. The trivet should be placed between the coil and the percolator.

Gas and Ceramic Top electric stoves: it is not necessary to use the enclosed protective metal trivet on these types of stoves.

Place the percolator on medium heat. As the water boils, the water will be forced up through the stem and distributed over the top of the basket lid. The water will seep through the coffee grounds and drip through the bottom of the basket and into the lower portion of the percolator. Once the coffee has reached the preferred color, remove from the heat source. Carefully remove the stem & brew basket before serving the coffee.

Cleaning: Percolator is dishwasher safe, or hand wash with a non-abrasive cleaner.

FOR HOUSEHOLD USE ONLY
